

# Strategic planning for medical readiness

**The Common User Database [CUD] assists the Department of Defense Military Health System in managing clinical workflow processes used to select medical surgical items, equipment and pharmaceuticals. CUD is a net-centric, medical materiel logistics and clinical patient encounter planning and standardization tool.**

## **Product Features**

- Merges medical materiel logistics and clinical patient encounter data
- Allows online collaboration to quickly manage workflow
- Facilitates Defense Medical Standardization Board business objectives

## **Benefits for the Military Health System**

- Helps facilitate materiel standardization
- Creates optimal medical readiness interoperability
- Delivers authoritative data source for medical, combat, requirements, training and human resources to be used by the joint community for planning and simulations, resulting in the deployment of sufficient medical resources throughout the world
