

It starts with healthy data

The Military Health System Data Repository [MDR] is the centralized data repository for the Department of Defense that captures, validates and distributes health network data worldwide. The MDR captures and validates data from more than 260 DoD health data network systems worldwide and is the single point for data integration, data quality edits, online and nearline data storage and healthcare data transfers.

Product Features

- Delivers one-time data capture and validation
- Preserves historical “raw” data by type and by year
- Normalizes and processes all data type against specific business rules

Benefits to the Military Health System

- Assures controlled access to privacy protected data
- Supplies interagency data sharing with the Department of Veterans Affairs
- Serves as the single point for data integration, data quality edits and healthcare data transfers
