

This is how we look at medical claims

Patient Encounter Processing and Reporting [PEPR] is a Web-based suite of applications used to analyze purchased care claims data generated for the Department of Defense Military Health System. PEPR assists in the analysis and reporting of billions of dollars in purchased care costs and workload data worldwide.

Product Features

- Collects, validates and tracks purchased care health data
- Analyzes data by region, state or military treatment facility
- Reports and scrutinizes data

Benefits to the Military Health System

- Identifies and reports fraudulent and duplicate claims
- Forecasts claims cost and workload data
- Reports billions of dollars in annual government health funds expenditures
