Meningococcal B Vaccine

Vaccine	Brands: Bexsero® (MenB-4C), Trumenba® (MenB-FHbp)
Description	Inactivated (recombinant) vaccine MenB-4C contains 3 recombinant cell surface proteins MenB-FHbp contains 2 FHbp variants Bexsero®: Tip cap contains natural rubber latex See package insert
Dose & Route	Dose: 0.5 mL Route: IM in deltoid region of upper arm. (Precaution: hemophilia, thrombocytopenia, and anticoagulation therapy) See package insert
Indications	MenB vaccine routinely recommended for people 10 years of age and older at increased risk due to:

Meningococcal B Vaccine

(Continued)

Administration Schedule	Bexsero: 2-dose series, separated by at least 1 month Trumenba (MenB-FHbp) is licensed as both a 2-dose (at 0 and 6 months) and 3-dose (at 0, 1-2, and 6 months) series. The choice of dosing schedule may depend on the risk of exposure and the patient's susceptibility to meningococcal serogroup B disease. If the second dose is administered earlier than 6 months after the first dose, a third dose should be administered at least 4 months after the second dose. The same vaccine must be used for all doses. May be given with other age-appropriate vaccines
Booster	Booster doses for previously vaccinated persons is not routinely recommended unless person becomes or remains at increased risk. A booster dose 1 year after primary series and every 2-3 years can be considered. An order by a privileged provider is required.
Contraindications	Severe allergic reaction to a previous dose of Bexsero or Trumenba or any component of the vaccines.
Special Considerations	Defer administration of MenB vaccine during pregnancy or lactation, unless the woman is at increased risk for disease and benefits of vaccination outweigh potential risks. Immediately prior to administration of either vaccine, shake single-dose prefilled syringe well to obtain a homogeneous suspension. Either MenB vaccine may be administered to immunosuppressed individuals; however, immune response may be reduced. For persons at increased risk for meningococcal disease and for use during serogroup B meningococcal disease outbreaks, ACIP recommends three doses of Trumenba® at 0, 1-2, and 6 months. For healthy adolescents not at increased risk for meningococcal disease, ACIP recommends 2 doses of Trumenba® at 0 and 6 months. See Storage and Handling Section Bexsero: 2–8°C; protect from light. Do not freeze; if freezing occurs, discard vaccine. Trumenba: 2–8°C. Store syringes horizontally (lying flat) to minimize redispersion time. Do not freeze; if freezing occurs, discard vaccine.
