

Table 1

Recommended Child and Adolescent Immunization Schedule for Ages 18 Years or Younger, United States, 2024

These recommendations must be read with the notes that follow. For those who fall behind or start late, provide catch-up vaccination at the earliest opportunity as indicated by the green bars. To determine minimum intervals between doses, see the catch-up schedule (Table 2).

Vaccine and other immunizing agents (RSV-mAb [Nirsevimab])	Birth	1 mo	2 mos	4 mos	6 mos	9 mos	12 mos	15 mos	18 mos	19–23 mos	2–3 yrs	4–6 yrs	7–10 yrs	11–12 yrs	13–15 yrs	16 yrs	17–18 yrs	
Respiratory syncytial virus (RSV-mAb [Nirsevimab])	1 st dose	← 2 nd dose →																
Hepatitis B (HepB)	1 st dose	← 2 nd dose →																
Rotavirus (RV); RV1 (2-dose series), RV5 (3-dose series)	1 st dose	← 2 nd dose →																
Diphtheria, tetanus, acellular pertussis (DTaP-7 yrs)	1 st dose	← 2 nd dose →																
Haemophilus influenzae type b (Hib)	1 st dose	← 2 nd dose →																
Pneumococcal conjugate (PCV15, PCV20)	1 st dose	← 2 nd dose →																
Inactivated poliovirus (IPV <18 yrs)	1 st dose	← 2 nd dose →																
COVID-19 (1vCOV-mRNA, 1vCOV-aP5)	1 st dose	← 2 nd dose →																
Influenza (IV4)	1 st dose	← 2 nd dose →																
Influenza (LAIV4)	1 st dose	← 2 nd dose →																
Measles, mumps, rubella (MMR)	1 st dose	← 2 nd dose →																
Varicella (VAR)	1 st dose	← 2 nd dose →																
Hepatitis A (HepA)	1 st dose	← 2 nd dose →																
Tetanus, diphtheria, acellular pertussis (Tdap ≥7 yrs)	1 st dose	← 2 nd dose →																
Human papillomavirus (HPV)	1 st dose	← 2 nd dose →																
Meningococcal (MenACWY-CRM ≥2 mos, MenACWP-11 ≥2 years)	1 st dose	← 2 nd dose →																
Meningococcal B (MenB-4C, MenB-FHbp)	1 st dose	← 2 nd dose →																
Respiratory syncytial virus vaccine (RSV [Abyryvo])	1 st dose	← 2 nd dose →																
Dengue (DENVCYD; 9–16 yrs)	1 st dose	← 2 nd dose →																
M pox	1 st dose	← 2 nd dose →																

Range of recommended ages for all children (Yellow bar) | Range of recommended ages for catch-up vaccination (Green bar) | Range of recommended ages for certain high-risk groups (Purple bar) | Recommended vaccination can begin in this age group (Checkered bar) | Recommended vaccination based on stated clinical decision-making (Light blue bar) | No recommendation nor applicable (Grey bar)

Table 3 Recommended Child and Adolescent Immunization Schedule by Medical Indication, United States, 2024

Always use this table in conjunction with Table 1 and the Notes that follow. Medical conditions are often not mutually exclusive. If multiple conditions are present, refer to guidance in all relevant columns. See Notes for medical conditions not listed.

Vaccine and other immunizing agents	Pregnancy	Immunocompromised (excluding HIV infection)	HIV infection CD4 percentage and count ^a	CSF leak or cochlear implant	Asplenia or complement deficiencies	Heart disease or chronic lung disease	Kidney failure, End-stage renal disease or on Dialysis	Chronic liver disease	Diabetes
RSV-mAb (nirsevimab)		2nd RSV season	1 dose depending on maternal RSV vaccination status. See Notes						
Hepatitis B									
Rotavirus		SCD ^b							
DTap/DTaP	DTaP								
Hib	Tdap: 1 dose each pregnancy	HSCT: 3 doses	See Notes		See Notes				
Pneumococcal									
IPV									
COVID-19			See Notes						
IVA									
LAIV4									Asthma, wheezing: 2–4 years ^c
MMR	*								
VAR	*								
Hepatitis A									
HPV	*	3 dose series. See Notes							
MenACWY									
MenB									
RSV (Abrysvo)	Seasonal administration, See Notes								
Dengue									
Mpox	See Notes								

Recommended for all age-eligible children who lack documentation of a complete vaccination series

Not recommended for all children, but is recommended for some children based on increased risk for severe outcomes from disease

Recommended for all age-eligible children, and additional doses may be necessary based on medical condition or other indications. See Notes.

Precaution: Might be indicated if benefit of protection outweighs risk of adverse reaction

Contraindicated or not recommended

Reversible after pregnancy, if indicated

No Guidance/Not Applicable

a. For additional information regarding HIV laboratory parameters and use of live vaccines, see the General Best Practice Guidelines for Immunization, www.cdc.gov/eid/content/guidance/gbest/gbest-immunocompetency.html and Table 4-1 (footnote 1) at www.cdc.gov/eid/content/guidance/gbest/gbest-immunocompetency.html.

b. SCD: Severe Combined Immunodeficiency

c. LAIV4 contraindicated for children 2–4 years of age with asthma or wheezing during the preceding 12 months

Notes

Recommended Child and Adolescent Immunization Schedule for Ages 18 Years or Younger, United States, 2024

For vaccination recommendations for persons ages 19 years or older, see the Recommended Adult Immunization Schedule, 2024.

Additional information

- For calculating intervals between doses, 4 weeks = 28 days. Intervals of ≥ 4 months are determined by calendar months.
- Within a number range (e.g., 12–18), a dash (–) should be read as “through.”
- Vaccine doses administered ≤ 4 days before the minimum age or interval are considered valid. Doses of any vaccine administered ≥ 5 days earlier than the minimum age or minimum interval should not be counted as valid and should be repeated as age appropriate. **The repeat dose should be spaced after the invalid dose by the recommended minimum interval.** For further details, see Table 3-2. Recommended and minimum ages and intervals between vaccine doses, in *General Best Practice Guidelines for Immunization* at www.cdc.gov/vaccines/hcp/acip-recs/general-recs/timing.html.
- Information on travel vaccination requirements and recommendations is available at www.cdc.gov/travel/.
- For vaccination of persons with immunodeficiencies, see Table 8-1. Vaccination of persons with primary and secondary immunodeficiencies, in *General Best Practice Guidelines for Immunization* at www.cdc.gov/vaccines/hcp/acip-recs/general-recs/immuno-competence.html, and Immunization in Special Clinical Circumstances (in: Kimberlin DW, Barnett ED, Lynfield Ruth, Sawyer MH, eds. *Red Book. 2021–2024 Report of the Committee on Infectious Diseases*. 32nd ed. Itasca, IL: American Academy of Pediatrics; 2021:72–86).
- For information about vaccination in the setting of a vaccine-preventable disease outbreak, contact your state or local health department.
- The National Vaccine Injury Compensation Program (VICP) is a no-fault alternative to the traditional legal system for resolving vaccine injury claims. All vaccines included in the child and adolescent vaccine schedule are covered by VICP except dengue, PPS23, RSV, Mpiox, and COVID-19 vaccines. Mpiox and COVID-19 vaccines are covered by the Countermeasures Injury Compensation Program (CICP). For more information, see www.hrsa.gov/vaccinecompensation or www.hrsa.gov/cicp.

COVID-19 vaccination

(minimum age: 6 months [Moderna and Pfizer-BioNTech COVID-19 vaccines], 12 years [Novavax COVID-19 Vaccine])

Routine vaccination

Age 6 months–4 years

- **Unvaccinated:**
 - 2-dose series of updated (2023–2024 Formula) Moderna at 0, 4–8 weeks
 - 3-dose series of updated (2023–2024 Formula) Pfizer-BioNTech at 0, 3–8, 11–16 weeks
- **Previously vaccinated* with 1 dose of any Moderna:**
 - 1 dose of updated (2023–2024 Formula) Moderna 4–8 weeks after the most recent dose.
- **Previously vaccinated* with 2 or more doses of any Moderna:**
 - 1 dose of updated (2023–2024 Formula) Moderna at least 8 weeks after the most recent dose.
- **Previously vaccinated* with 1 dose of any Pfizer-BioNTech:**
 - 2-dose series of updated (2023–2024 Formula) Pfizer-BioNTech at 0.8 weeks (minimum interval between previous Pfizer-BioNTech and dose 1; 3–8 weeks).
- **Previously vaccinated* with 2 or more doses of any Pfizer-BioNTech:**
 - 1 dose of updated (2023–2024 Formula) Pfizer-BioNTech at least 8 weeks after the most recent dose.

Age 5–11 years

- **Unvaccinated:**
 - 1 dose of updated (2023–2024 Formula) Moderna or Pfizer-BioNTech vaccine.
- **Previously vaccinated* with 1 or more doses of Moderna or Pfizer-BioNTech:**
 - 1 dose of updated (2023–2024 Formula) Moderna or Pfizer-BioNTech at least 8 weeks after the most recent dose.

Age 12–18 years

- **Unvaccinated:**
 - 1 dose of updated (2023–2024 Formula) Moderna or Pfizer-BioNTech vaccine
 - 2-dose series of updated (2023–2024 Formula) Novavax at 0, 3–8 weeks
- **Previously vaccinated* with any COVID-19 vaccine(s):**
 - 1 dose of any updated (2023–2024 Formula) COVID-19 vaccine at least 8 weeks after the most recent dose.

Special situations

Persons who are moderately or severely immunocompromised**

Age 6 months–4 years

- **Unvaccinated:**
 - 3-dose series of updated (2023–2024 Formula) Moderna at 0, 4, 8 weeks
 - 3-dose series of updated (2023–2024 Formula) Pfizer-BioNTech at 0, 3, 11 weeks.
- **Previously vaccinated* with 1 dose of any Moderna:**
 - 2-dose series of updated (2023–2024 Formula) Moderna at 0, 4 weeks (minimum interval between previous Moderna and dose 1; 4 weeks).
- **Previously vaccinated* with 2 doses of any Moderna:**
 - 1 dose of updated (2023–2024 Formula) Moderna at least 4 weeks after the most recent dose.
- **Previously vaccinated* with 3 or more doses of any Moderna:**
 - 1 dose of updated (2023–2024 Formula) Moderna at least 8 weeks after the most recent dose.
- **Previously vaccinated* with 1 dose of any Pfizer-BioNTech:**
 - 2-dose series of updated (2023–2024 Formula) Pfizer-BioNTech at 0.8 weeks (minimum interval between previous Pfizer-BioNTech and dose 1; 3 weeks).
- **Previously vaccinated* with 2 or more doses of any Pfizer-BioNTech:**
 - 1 dose of updated (2023–2024 Formula) Pfizer-BioNTech at least 8 weeks after the most recent dose.

Age 5–11 years

- **Unvaccinated:**
 - 3-dose series of updated (2023–2024 Formula) Moderna at 0, 4, 8 weeks
 - 3-dose series updated (2023–2024 Formula) Pfizer-BioNTech at 0, 3, 7 weeks.
- **Previously vaccinated* with 1 dose of any Moderna:**
 - 2-dose series of updated (2023–2024 Formula) Moderna at 0, 4 weeks (minimum interval between previous Moderna and dose 1; 4 weeks).
- **Previously vaccinated* with 2 doses of any Moderna:**
 - 1 dose of updated (2023–2024 Formula) Moderna at least 4 weeks after the most recent dose.
- **Previously vaccinated* with 1 dose of any Pfizer-BioNTech:**
 - 2-dose series of updated (2023–2024 Formula) Pfizer-BioNTech at 0, 4 weeks (minimum interval between previous Pfizer-BioNTech and dose 1; 3 weeks)
- **Previously vaccinated* with 2 doses of any Pfizer-BioNTech:**
 - 1 dose of 2023–2024 Pfizer-BioNTech at least 4 weeks after the most recent dose.

Notes

Recommended Child and Adolescent Immunization Schedule for Ages 18 Years or Younger, United States, 2024

- **Previously vaccinated* with 3 or more doses of any Moderna or Pfizer-BioNTech:** 1 dose of updated (2023–2024 Formula) Moderna or Pfizer-BioNTech at least 8 weeks after the most recent dose.

Age 12–18 years

- **Unvaccinated:**
 - 3-dose series of updated (2023–2024 Formula) Moderna at 0, 4, 8 weeks
 - 3-dose series of updated (2023–2024 Formula) Pfizer-BioNTech at 0, 3, 7 weeks
 - 2-dose series of updated (2023–2024 Formula) Novavax at 0, 3 weeks

- **Previously vaccinated* with 1 dose of any Moderna:** 2-dose series of updated (2023–2024 Formula) Moderna at 0, 4 weeks (minimum interval between previous Moderna dose and dose 1: 4 weeks).
- **Previously vaccinated* with 2 doses of any Moderna:** 1 dose of updated (2023–2024 Formula) Moderna at least 4 weeks after the most recent dose.
- **Previously vaccinated* with 1 dose of any Pfizer-BioNTech:** 2-dose series of updated (2023–2024 Formula) Pfizer-BioNTech at 0, 4 weeks (minimum interval between previous Pfizer-BioNTech dose and dose 1: 3 weeks).
- **Previously vaccinated* with 2 doses of any Pfizer-BioNTech:** 1 dose of updated (2023–2024 Formula) Pfizer-BioNTech at least 4 weeks after the most recent dose.

- **Previously vaccinated* with 3 or more doses of any Moderna or Pfizer-BioNTech:** 1 dose of any updated (2023–2024 Formula) COVID-19 vaccine at least 8 weeks after the most recent dose.
- **Previously vaccinated* with 1 or more doses of Janssen Moderna or with or without dose(s) of any original monovalent or bivalent COVID-19 vaccine:** 1 dose of any updated (2023–2024 Formula) COVID-19 vaccine at least 8 weeks after the most recent dose.

There is no preferential recommendation for the use of one COVID-19 vaccine over another when more than one recommended age-appropriate vaccine is available.

Administer an age-appropriate COVID-19 vaccine product for each dose. For information about transition from age 4 years to age 5 years or age 11 years during COVID-19 vaccination series, see Tables 1 and 2 at www.cdc.gov/vaccines/covid-19/c/clinical-considerations/interim-considerations-s.us.html#icovid-vaccines.

Current COVID-19 schedule and dosage formulation available at www.cdc.gov/covid/schedule. For more information on Emergency Use Authorization (EUA) indications for COVID-19 vaccines, see www.fda.gov/ema/agency-preparedness-and-response/coronavirus-disease-2019-covid-19/covid-19-vaccines

***Note:** Previously vaccinated is defined as having received any Original monovalent or bivalent COVID-19 vaccine (Janssen, Moderna, Novavax, Pfizer-BioNTech) prior to the updated 2023–2024 formulation.

****Note:** Persons who are moderately or severely immunocompromised have the option to receive one additional dose of updated (2023–2024 Formula) COVID-19 vaccine at least 2 months following the last recommended updated (2023–2024 Formula) COVID-19 vaccine dose. Further additional updated (2023–2024 Formula) COVID-19 vaccine dose(s) may be administered, informed by the clinical judgement of a healthcare provider and personal preference and circumstances. Any further additional doses should be administered at least 2 months after the last updated (2023–2024 Formula) COVID-19 vaccine dose. Moderately or severely immunocompromised children 6 months–4 years of age should receive homologous updated (2023–2024 Formula) mRNA vaccine dose(s) if they receive additional doses.

Dengue vaccination (minimum age: 9 years)

Routine vaccination

- Age 9–16 years living in areas with endemic dengue AND have laboratory confirmation of previous dengue infection
 - 3-dose series administered at 0, 6, and 12 months
- Endemic areas include Puerto Rico, American Samoa, US Virgin Islands, Federated States of Micronesia, Republic of Marshall Islands, and the Republic of Palau. For updated guidance on dengue endemic areas and pre-vaccination laboratory testing see www.cdc.gov/mmwr/volumes/70/rr/r7006a1.htm?s_cid=r7006a1_w and www.cdc.gov/dengue/vaccine/hcp/index.html
- Dengue vaccine should not be administered to children traveling to or visiting endemic dengue areas.

Diphtheria, tetanus, and pertussis (DTaP for Kinrix® or Quadracel®)

Routine vaccination

- 5-dose series (3-dose primary series at age 2, 4, and 6 months, followed by a booster doses at ages 15–18 months and 4–6 years)

- **Prospectively:** Dose 4 may be administered as early as age 12 months if at least 6 months have elapsed since dose 3.
- **Retrospectively:** A 4th dose that was inadvertently administered as early as age 12 months may be counted if at least 4 months have elapsed since dose 3.

Catch-up vaccination

- **Dose 5 is not necessary:** if dose 4 was administered at age 4 years or older and at least 6 months after dose 3.
- For other catch-up guidance, see Table 2.

Special situations

- **Wound management** in children less than age 7 years with history of 3 or more doses of tetanus-toxoid-containing vaccine: For all wounds, except clean and minor wounds, administer DTaP if more than 5 years since last dose of tetanus-toxoid-containing vaccine. For detailed information, see www.cdc.gov/mmwr/volumes/67/rr/r6702a1.htm.

Haemophilus influenzae type b vaccination (minimum age: 6 weeks)

Routine vaccination

- **Ac-HiB®, Hibicrix®, Pentacel®, or Vaxelis®:** 4-dose series (3-dose primary series at age 2, 4, and 6 months, followed by a booster dose at age 12–15 months)
 - **Vaxelis®** is not recommended for use as a booster dose. A different Hib-containing vaccine should be used for the booster dose.
 - **PedvaxHIB®:** 3-dose series (2-dose primary series at age 2 and 4 months, followed by a booster dose at age 12–15 months)
- #### Catch-up vaccination
- **Dose 1 at age 7–11 months:** Administer dose 2 at least 4 weeks later and dose 3 (final dose) at age 12–15 months or 8 weeks after dose 2 (whichever is later).
 - **Dose 1 at age 12–14 months:** Administer dose 2 (final dose) at least 8 weeks after dose 1.
 - **Dose 1 before age 12 months and dose 2 before age 15 months:** Administer dose 3 (final dose) at least 8 weeks after dose 2.
 - **2 doses of PedvaxHIB® before age 12 months:** Administer dose 3 (final dose) at age 12–59 months and at least 8 weeks after dose 2.
 - **1 dose administered at age 15 months or older:** No further doses needed

- **Unvaccinated at age 15–59 months:** Administer 1 dose.

Notes

Recommended Child and Adolescent Immunization Schedule for Ages 18 Years or Younger, United States, 2024

- **Previously unvaccinated children age 60 months or older who are not considered high risk:** Do not require catch-up vaccination

For other catch-up guidance, see Table 2. *Vaxelis*[®] can be used for catch-up vaccination in children less than age 3 years. Follow the catch-up schedule even if *Vaxelis*[®] is used for one or more doses. For detailed information on use of *Vaxelis*[®], see www.cdc.gov/mmwr/volumes/69/wr/mm6905a5.htm.

Special situations

- **Chemotherapy or radiation treatment:**
 - **Age 12–59 months**
 - Unvaccinated or only 1 dose before age 12 months: 2 doses, 8 weeks apart
 - 2 or more doses before age 12 months: 1 dose at least 8 weeks after previous dose
- **Doses administered within 14 days of starting therapy or during therapy should be repeated at least 3 months after therapy completion.**
- **Hematopoietic stem cell transplant (HSCT):**
 - 3-dose series 4 weeks apart starting 6 to 12 months after successful transplant, regardless of Hib vaccination history
- **Anatomic or functional asplenia (including sickle cell disease):**
 - Unvaccinated or only 1 dose before age 12 months: 2 doses, 8 weeks apart
 - 2 or more doses before age 12 months: 1 dose at least 8 weeks after previous dose

Unvaccinated* persons age 5 years or older

- 1 dose
- **Elective splenectomy:**
 - **Unvaccinated* persons age 15 months or older**
 - 1 dose (preferably at least 14 days before procedure)
- **HIV infection:**
 - **Age 12–59 months**
 - Unvaccinated or only 1 dose before age 12 months: 2 doses, 8 weeks apart
 - 2 or more doses before age 12 months: 1 dose at least 8 weeks after previous dose

Unvaccinated* persons age 5–18 years

- 1 dose
- **Immunoglobulin deficiency, early component complement deficiency:**
 - **Age 12–59 months**
 - Unvaccinated or only 1 dose before age 12 months: 2 doses, 8 weeks apart

- 2 or more doses before age 12 months:
 - 1 dose at least 8 weeks after previous dose
- * **Unvaccinated** = Less than routine series (through age 14 months) **OR** no doses (age 15 months or older)

Hepatitis A vaccination (minimum age: 12 months for routine vaccination)

Routine vaccination

- 2-dose series (minimum interval: 6 months) at age 12–23 months
- **Catch-up vaccination**
 - Unvaccinated persons through age 18 years should complete a 2-dose series (minimum interval: 6 months).
 - Persons who previously received 1 dose at age 12 months or older should receive dose 2 at least 6 months after dose 1.
 - Adolescents age 18 years or older may receive the combined HepA and HepB vaccine, **Twinrix**[®], as a 3-dose series (0, 1, and 6 months) or 4-dose series (3 doses at 0, 7, and 21–30 days, followed by a booster dose at 12 months).

International travel

- Persons traveling to or working in countries with high or intermediate endemic hepatitis A (www.cdc.gov/travel/):
 - **Infants age 6–11 months:** 1 dose before departure; revaccinate with 2 doses (separated by at least 6 months) between age 12–23 months.
 - **Unvaccinated age 12 months or older:** Administer dose 1 as soon as travel is considered.

Hepatitis B vaccination (minimum age: birth)

Routine vaccination

- **HepB vaccine for doses administered before age 6 weeks**
 - Birth weight $\geq 2,000$ grams: 1 dose within 24 hours of birth if medically stable
 - Birth weight $< 2,000$ grams: 1 dose at chronological age 1 month or hospital discharge (whichever is earlier and even if weight is still $< 2,000$ grams).
- Infants who did not receive a birth dose should begin the series as soon as possible (see Table 2 for minimum intervals).
- Administration of 4 doses is permitted when a combination vaccine containing HepB is used after the birth dose.
- **Minimum intervals (see Table 2):** when 4 doses are administered, substitute “dose 4” for “dose 3” in these calculations

- **Final (3rd or 4th) dose:** age 6–18 months (minimum age 24 weeks)

Mother is HBsAg-positive

• **Birth dose (monovalent HepB vaccine only):** administer HepB vaccine and hepatitis B immune globulin (HBIG) (in separate limbs) within 12 hours of birth, regardless of birth weight.

- **Birth weight $< 2,000$ grams:** administer 3 additional doses of HepB vaccine beginning at age 1 month (total of 4 doses)
- **Final (3rd or 4th) dose:** administer at age 6 months (minimum age 24 weeks)

- Test for HBsAg and anti-HBs at age 9–12 months. If HepB series is delayed, test 1–2 months after final dose. Do not test before age 9 months.

Mother is HBsAg-unknown

If other evidence suggestive of maternal hepatitis B infection exists (e.g., presence of HBV DNA, HBsAg-positive, or mother known to have chronic hepatitis B infection), manage infant as if mother is HBsAg-positive

Birth dose (monovalent HepB vaccine only):

- Birth weight $\geq 2,000$ grams: administer HepB vaccine within 12 hours of birth. Determine mother’s HBsAg status as soon as possible. If mother is determined to be HBsAg-positive, administer HBIG as soon as possible (in separate limb), but no later than 7 days of age.

- Birth weight $< 2,000$ grams: administer HepB vaccine and HBIG (in separate limbs) within 12 hours of birth. Administer 3 additional doses of HepB vaccine beginning at age 1 month (total of 4 doses)

- **Final (3rd or 4th) dose:** administer at age 6 months (minimum age 24 weeks)

- If mother is determined to be HBsAg-positive or if status remains unknown, test for HBsAg and anti-HBs at age 9–12 months. If HepB series is delayed, test 1–2 months after final dose. Do not test before age 9 months.

Catch-up vaccination

- Unvaccinated persons should complete a 3-dose series at 0, 1–2, 6 months. See Table 2 for minimum intervals
- Adolescents age 11–15 years may use an alternative 2-dose schedule with at least 4 months between doses (adult formulation, **Recombivax HB**[®] only).
- Adolescents age 18 years may receive:
 - **Hepilav-B**[®]: 2-dose series at least 4 weeks apart
 - **PreHebVario**[®]: 3-dose series at 0, 1, and 6 months
- Combined HepA and HepB vaccine, **Twinrix**[®]: 3-dose series (0, 1, and 6 months) or 4-dose series (3 doses at 0, 7, and 21–30 days, followed by a booster dose at 12 months).

Special situations

- Revaccination is not generally recommended for persons with a normal immune status who were vaccinated as infants, children, adolescents, or adults.
 - **Post-vaccination serology testing and revaccination** (if anti-HBs <10mIU/mL) is recommended for certain populations, including:
 - Infants born to HBsAg-positive mothers
 - Persons who are predialysis or on maintenance dialysis
 - Other immunocompromised persons
 - For detailed revaccination recommendations, see www.cdc.gov/vaccines/hcp/acip-precs/vacc-specific/hepb.html.
- Note:** Hepatitis-B and PreHevBrio are not recommended in pregnancy due to lack of safety data in pregnant persons

Human papillomavirus vaccination

(minimum age: 9 years)

Routine and catch-up vaccination

- HPV vaccination routinely recommended at **age 11–12 years (can start at age 9 years)** and catch-up HPV vaccination recommended for all persons through age 18 years if not adequately vaccinated
- 2- or 3-dose series depending on age at initial vaccination:
 - **Age 9–14 years at initial vaccination:** 2-dose series at 0, 6–12 months (minimum interval: 5 months; repeat dose if administered too soon)
 - **Age 15 years or older at initial vaccination:** 3-dose series at 0, 1–2 months, 6 months (minimum intervals: dose 1 to dose 2: 4 weeks / dose 2 to dose 3: 12 weeks / dose 1 to dose 3: 5 months; repeat dose if administered too soon)
- No additional dose recommended when any HPV vaccine series of any valency has been completed using recommended dosing intervals.

Special situations

- **Immunocompromising conditions, including HIV infection:** 3-dose series, even for those who initiate vaccination at age 9 through 14 years.
- **History of sexual abuse or assault:** Start at age 9 years
- **Pregnancy:** Pregnancy testing not needed before vaccination; HPV vaccination not recommended until after pregnancy; no intervention needed if vaccinated while pregnant

Influenza vaccination

(minimum age: 6 months [IV], 2 years [LAIV4], 18 years [recombinant influenza vaccine, RIV4])

Routine vaccination

- Use any influenza vaccine appropriate for age and health status annually:
 - **Age 6 months–8 years** who have received fewer than 2 influenza vaccination doses before July 1, 2023, or whose influenza vaccination history is unknown: 2 doses, separated by at least 4 weeks. Administer dose 2 even if the child turns 9 years between receipt of dose 1 and dose 2.
 - **Age 6 months–8 years** who have received at least 2 influenza vaccination doses before July 1, 2023: 1 dose
 - **Age 9 years or older:** 1 dose
- For the 2023–2024 season, see www.cdc.gov/mmr/volumes/72/rr/7202a1.htm.
- For the 2024–25 season, see the 2024–25 ACIP influenza vaccine recommendations.

Special situations

- **Close contacts (e.g., household contacts) of severely immunosuppressed persons who require a protected environment:** should not receive LAIV4. If LAIV4 is given, they should avoid contact with for such immunosuppressed persons for 7 days after vaccination.
- Note:** Persons with an egg allergy can receive any influenza vaccine (egg-based and non-egg-based) appropriate for age and health status.

Measles, mumps, and rubella vaccination

(minimum age: 12 months for routine vaccination)

Routine vaccination

- 2-dose series at age 12–15 months, age 4–6 years
- MMR or MMR* may be administered

Note: For dose 1 in children age 12–47 months, it is recommended to administer MMR and varicella vaccines separately. MMR* may be used if parents or caregivers express a preference.

Catch-up vaccination

- Unvaccinated children and adolescents: 2-dose series at least 4 weeks apart*
- The maximum age for use of MMR* is 12 years.

Special situations**International travel**

- **Infants age 6–11 months:** 1 dose before departure; revaccinate with 2-dose series at age 12–15 months (12 months for children in high-risk areas) and dose 2 as early as 4 weeks later.*
 - **Unvaccinated children age 12 months or older:** 2-dose series at least 4 weeks apart before departure*
 - In mumps outbreak settings, for information about additional doses of MMR (including 3rd dose of MMR), see www.cdc.gov/mmr/volumes/67/wr/mmr6701a7.htm
- Note:** If MMRV is used, the minimum interval between MMRV doses is 3 months

Meningococcal serogroup A, C, W, Y vaccination

(minimum age: 2 months [MenACWY-CRM, Menveo], 2 years [MenACWY-TT, MenQuadfi]), 10 years [MenACWY-TT/MenB-FHbp, Penbraya])

Routine vaccination

- 2-dose series at age 11–12 years; 16 years

Catch-up vaccination

- Age 13–15 years: 1 dose now and booster at age 16–18 years (minimum interval: 8 weeks)
- Age 16–18 years: 1 dose

Special situations

Anatomic or functional asplenia (including sickle cell disease), HIV infection, persistent complement component deficiency, complement inhibitor (e.g., eculizumab, ravulizumab) use:

- **Menveo****
 - Dose 1 at age 2 months; 4-dose series (additional 3 doses at age 4, 6, and 12 months)
 - Dose 1 at age 3–6 months; 3- or 4-dose series (dose 2 and dose 3 if applicable) at least 8 weeks after previous dose until a dose is received at age 7 months or older, followed by an additional dose at least 12 weeks later and after age 12 months)
 - Dose 1 at age 7–23 months; 2-dose series (dose 2 at least 12 weeks after dose 1 and after age 12 months)
 - Dose 1 at age 24 months or older; 2-dose series at least 8 weeks apart

MenQuadfi**

- Dose 1 at age 24 months or older; 2-dose series at least 8 weeks apart

Notes

Recommended Child and Adolescent Immunization Schedule for Ages 18 Years or Younger, United States, 2024

Travel to countries with hyperendemic or epidemic meningococcal disease, including countries in the African meningitis belt or during the Hajj (www.cdc.gov/travel/):

- Children less than age 24 months:
 - **Menveo[®]** (age 2–23 months)
 - Dose 1 at age 2 months; 4-dose series (additional 3 doses at age 4, 6, and 12 months)
 - Dose 1 at age 3–6 months; 3- or 4-dose series (dose 2 [and dose 3 if applicable] at least 8 weeks after previous dose until a dose is received at age 7 months or older, followed by an additional dose at least 12 weeks later and a 16th age 12 months)
 - Dose 1 at age 7–23 months; 2-dose series (dose 2 at least 12 weeks after dose 1 and after age 12 months)
- Children age 2 years or older: 1 dose Menveo[®] or MenQuadfi[®]

First-year college students who live in residential housing (if not previously vaccinated at age 16 years or older) or military recruits:

- 1 dose Menveo[®] or MenQuadfi[®]

Adolescent vaccination of children who received MenACWY

prior to age 10 years:

- **Children for whom boosters are recommended** because of an ongoing increased risk of meningococcal disease (e.g., those with complement component deficiency, HIV, or asplenia): Follow the booster schedule for persons at increased risk.

- **Children for whom boosters are not recommended**

(e.g., a healthy child who received a single dose for travel to a country where meningococcal disease is endemic): Administer MenACWY according to the recommended adolescent schedule with dose 1 at age 11–12 years and dose 2 at age 16 years.

**Menveo has two formulations: lyophilized and liquid. The liquid formulation should not be used before age 10 years. See www.cdc.gov/vaccines/vpd/mening/downloads/menveo-single-vial-presentation.pdf.*

Note: For MenACWY booster dose recommendations for groups listed under “Special situations” and in an outbreak setting and additional meningococcal vaccination information, see www.cdc.gov/mmwr/volumes/69/rr/r69099a1.htm.

Children age 10 years or older may receive a single dose of Penbraya[™] as an alternative to separate administration of MenACWY and MenB when both vaccines would be given on the same clinic day (see “Meningococcal serogroup B vaccination” section below for more information).

Meningococcal serogroup B vaccination

(minimum age: 10 years [MenB-4C, Bexsero[®], MenB-FHbp, Trumenba[™], MenACWY-TT/MenB-FHbp, Penbraya[™]])

Shared clinical decision-making

- **Adolescents not at increased risk** of age 16–23 years (preferred age 16–18 years) based on shared clinical decision-making:
 - **Bexsero[®]**: 2-dose series at least 1 month apart
 - **Trumenba[™]**: 2-dose series at least 6 months apart (if dose 2 is administered earlier than 6 months, administer a 3rd dose at least 4 months after dose 2)

For additional information on shared clinical decision-making for MenB, see www.cdc.gov/vaccines/hcp/ad/min/downloads/isd-job-aid-scdm-mening-b-shared-clinical-decision-making.pdf

Special situations

Anatomic or functional asplenia (including sickle cell disease), persistent complement component deficiency, complement inhibitor (e.g., eculizumab, ravulizumab) use:

- **Bexsero[®]**: 2-dose series at least 1 month apart
- **Trumenba[™]**: 3-dose series at 0, 1–2, 6 months (if dose 2 was administered at least 6 months after dose 1, dose 3 not needed; if dose 3 is administered earlier than 4 months after dose 2, a 4th dose should be administered at least 4 months after dose 3)

Note: Bexsero[®] and Trumenba[™] are not interchangeable; the same product should be used for all doses in a series.

For MenB booster dose recommendations for groups listed under “Special situations” and in an outbreak setting and additional meningococcal vaccination information, see www.cdc.gov/mmwr/volumes/69/rr/r69099a1.htm.

Children age 10 years or older may receive a dose of Penbraya[™] as an alternative to separate administration of MenACWY and MenB when both vaccines would be given on the same clinic day. For age-eligible children not at increased risk, if Penbraya[™] is used for dose 1, MenB, MenB-FHbp (Trumenba) should be administered for dose 2, MenB. For age-eligible children at increased risk of meningococcal disease, Penbraya[™] may be used for additional MenACWY and MenB doses (including booster doses) if both would be given on the same clinic day and at least 6 months have elapsed since most recent Penbraya[™] dose.

Mpox vaccination

(minimum age: 18 years [Jynneos[®]])

Special situations

- **Age 18 years and at risk for Mpox infection:** 2-dose series, 28 days apart

Risk factors for Mpox infection include:

- Persons who are gay, bisexual, and other MSM, transgender or nonbinary people who in the past 6 months have had:
 - A new diagnosis of at least 1 sexually transmitted disease
 - More than 1 sex partner
 - Sex at a commercial sex venue
- Sex in association with a large public event in a geographic area where Mpox transmission is occurring
- Persons who are sexual partners of the persons described above
- Persons who anticipate experiencing any of the situations described above

- **Pregnancy:** There is currently no ACIP recommendation for Jynneos use in pregnancy due to lack of safety data in pregnant persons. Pregnant persons with any risk factor described above may receive Jynneos.

For detailed information, see: www.cdc.gov/vaccines/a/dtp/meetings/downloads/slides-2023-10-25-26/04-MPOX-Rap-508.pdf

Pneumococcal vaccination

(minimum age: 6 weeks [PCV15], [PCV20]; 2 years [PPSV23])

Routine vaccination with PCV

- 4-dose series at 2, 4, 6, 12–15 months

Catch-up vaccination with PCV

- Healthy children ages 2–4 years with any incomplete^a PCV series: 1 dose PCV
- For other catch-up guidance, see table 2.

Note: For children without risk conditions, PCV20 is not indicated if they have received 4 doses of PCV13 or PCV15 or another age appropriate complete PCV series.

Notes

Recommended Child and Adolescent Immunization Schedule for Ages 18 Years or Younger, United States, 2024

Special situations

- **Adolescents aged 18 years at increased risk of exposure to poliovirus and completed primary series***: may administer one lifetime IPV booster

***Note:** Complete primary series consist of at least 3 doses of IPV or trivalent oral poliovirus vaccine (TOPV) in any combination.

For detailed information, see: www.cdc.gov/vaccines/vpd/polio/hcp/recommendations.html

Respiratory syncytial virus immunization

(minimum age: birth [Nirsevimab, RSV-mAb (Beyfortus)[†]])

Routine immunization

- **Infants born October – March in most of the continental United States***

- Mother did not receive RSV vaccine OR mother's RSV vaccination status is unknown: administer 1 dose nirsevimab within 1 week of birth in hospital or outpatient setting

- Mother received RSV vaccine: **less than 14 days** prior to delivery: administer 1 dose nirsevimab within 1 week of birth in hospital or outpatient setting
- Mother received RSV vaccine: **at least 14 days** prior to delivery: nirsevimab not needed but can be considered in rare circumstances at the discretion of healthcare providers (see special populations and situations at www.cdc.gov/vaccines/vpd/rsv/hcp/child-faqs.html)

- **Infants born April–September in most of the continental United States***

- Mother did not receive RSV vaccine OR mother's RSV vaccination status is unknown: administer 1 dose nirsevimab shortly before start of RSV season*

- Mother received RSV vaccine: **less than 14 days** prior to delivery: administer 1 dose nirsevimab shortly before start of RSV season*
- Mother received RSV vaccine: **at least 14 days** prior to delivery: nirsevimab not needed but can be considered in rare circumstances at the discretion of healthcare providers (see special populations and situations at www.cdc.gov/vaccines/vpd/rsv/hcp/child-faqs.html)

Infants with prolonged birth hospitalization** (e.g., for prematurity) discharged October through March should be immunized shortly before or promptly after discharge.

Special situations

- **Ages 8–19 months with chronic lung disease of prematurity requiring medical support** (e.g., chronic corticosteroid therapy, diuretic therapy, or supplemental oxygen) any time during the 6-month period before the start of the second RSV season; severe immunocompromise; cystic fibrosis with either weight for length <10th percentile or manifestation of severe lung disease (e.g., previous hospitalization for pulmonary exacerbation in the first year of life) or abnormalities on chest imaging that persist when stable**;

- 1 dose nirsevimab shortly before start of second RSV season*

- **Ages 8–19 months who are American Indian or Alaska Native:**

- 1 dose nirsevimab shortly before start of second RSV season*

- **Age-eligible and undergoing cardiac surgery with cardiopulmonary bypass****: 1 additional dose of nirsevimab after surgery. For additional details see special populations and situations at www.cdc.gov/vaccines/vpd/rsv/hcp/child-faqs.html

***Note:** While the timing of the onset and duration of RSV season may vary, nirsevimab may be administered October through March in most of the continental United States. Providers in jurisdictions with RSV seasonality that differs from most of the continental United States (e.g., Alaska, jurisdiction with tropical climate) should follow guidance from public health authorities (e.g., CDC, health departments) or regional medical centers on timing of administration based on local RSV seasonality. Although optimal timing of administration is just before the start of the RSV season, nirsevimab may also be administered during the RSV season to infants and children who are age-eligible.

****Note:** Nirsevimab can be administered to children who are eligible to receive palivizumab. Children who have received nirsevimab should not receive palivizumab for the same RSV season.

For further guidance, see www.cdc.gov/mmwr/volumes/72/wr/mm7234a4.htm and www.cdc.gov/vaccines/vpd/rsv/hcp/child-faqs.html

Respiratory syncytial virus vaccination (RSV [Abrysvo][†])

Routine vaccination

- **Pregnant at 32 weeks 0 days through 36 weeks and 6 days gestation from September through January in most of the continental United States***; 1 dose RSV vaccine (Abrysvo[†]). Administer RSV vaccine regardless of previous RSV infection.
- Either maternal RSV vaccination or infant immunization with nirsevimab (RSV monoclonal antibody) is recommended to prevent respiratory syncytial virus lower respiratory tract infection in infants.

- **All other pregnant persons:** RSV vaccine not recommended. There is currently no ACP recommendation for RSV vaccination in subsequent pregnancies. No data are available to inform whether additional doses are needed in later pregnancies.

***Note:** Providers in jurisdictions with RSV seasonality that differs from most of the continental United States (e.g., Alaska, jurisdiction with tropical climate) should follow guidance from public health authorities (e.g., CDC, health departments) or regional medical centers on timing of administration based on local RSV seasonality.

Rotavirus vaccination (minimum age: 6 weeks)

Routine vaccination

- **Rotarix[†]**: 2-dose series at age 2 and 4 months
- **Rotateq[†]**: 3-dose series at age 2, 4, and 6 months
- If any dose in the series is either **Rotateq[†]** or unknown, default to 3-dose series.

Catch-up vaccination

- Do not start the series on or after age 15 weeks, 0 days.
- The maximum age for the final dose is 8 months, 0 days.
- For other catch-up guidance, see Table 2.

Notes

Tetanus, diphtheria, and pertussis (Tdap) vaccination
(minimum age: 11 years for routine vaccination, 7 years for catch-up vaccination)

Routine vaccination

- **Age 11–12 years:** 1 dose Tdap (adolescent booster)
- **Pregnancy:** 1 dose Tdap during each pregnancy, preferably in early part of gestational weeks 27–36.

Note: Tdap may be administered regardless of the interval since the last tetanus- and diphtheria-toxoid-containing vaccine.

Catch-up vaccination

- **Age 13–18 years who have not received Tdap:** 1 dose Tdap (adolescent booster)
- **Age 7–18 years not fully vaccinated* with DTaP:** 1 dose Tdap as part of the catch-up series (preferably the first dose); if additional doses are needed, use Td or Tdap.
- **Tdap administered at age 7–10 years**
 - **Age 7–9 years** who receive Tdap should receive the adolescent Tdap booster dose at age 11–12 years.
 - **Age 10 years** who receive Tdap do not need the adolescent Tdap booster dose at age 11–12 years.
- **DTaP inadvertently administered on or after age 7 years:** DTaP may count as part of catch-up series. Administer adolescent Tdap booster dose at age 11–12 years.
- **Age 10–18 years:** Count dose of DTaP as the adolescent Tdap booster dose.

- For other catch-up guidance, see Table 2.

Special situations

- **Wound management** in persons age 7 years or older with history of 3 or more doses of tetanus-toxoid-containing vaccine: For clean minor wounds, administer Tdap or Td if more than 10 years since last dose of tetanus-toxoid-containing vaccine; for all other wounds, administer Tdap or Td if more than 5 years since last dose of tetanus-toxoid-containing vaccine. Tdap is preferred for persons age 11 years or older who have not previously received Tdap or whose Tdap history is unknown. If a tetanus-toxoid-containing vaccine is indicated for a pregnant adolescent, use Tdap.
- For detailed information, see www.wccdc.gov/mmmwr/volumes/69/wr/mm6903a5.htm.

*Fully vaccinated = 5 valid doses of DTaP OR 4 valid doses of DTaP if dose 4 was administered at age 4 years or older

Varicella vaccination

(minimum age: 12 months)

Routine vaccination

- 2-dose series at age 12–15 months, 4–6 years
- VAR or MMRV may be administered*
- Dose 2 may be administered as early as 3 months after dose 1 if a dose inadvertently administered after at least 4 weeks may be counted as valid)

Note: For dose 1 in children age 12–47 months, it is recommended to administer MMR and varicella vaccines separately. MMRV may be used if parents or caregivers express a preference.

Catch-up vaccination

- Ensure persons age 7–18 years without evidence of immunity (see MMRV at www.cdc.gov/mmmwr/pdf/mm6504.pdf) have a 2-dose series:
- **Age 7–12 years:** Routine interval: 3 months (a dose inadvertently administered after at least 4 weeks may be counted as valid)
- **Age 13 years and older:** Routine interval: 4–8 weeks (minimum interval: 4 weeks)
- The maximum age for use of MMRV is 12 years.

Appendix

Recommended Child and Adolescent Immunization Schedule for Ages 18 Years or Younger, United States, 2024

Guide to Contraindications and Precautions to Commonly Used Vaccines

Adapted from *Table 4-1. In-Advisory Committee on Immunization Practices (ACIP) General Best Practice Guidelines for Immunization: Contraindication and Precautions, Prevention and Control of Seasonal Influenza with Vaccines: Recommendations of the Advisory Committee on Immunization Practices—United States, 2023–24 Influenza Season* | MMWR (cdc.gov). Contraindications and Precautions for JYNNEOS Vaccination

Vaccines and other immunizing agents	Contra Indicated or Not Recommended ¹	Precautions ²
COVID-19 mRNA vaccines (Pfizer-BioNTech, Moderna)	<ul style="list-style-type: none"> Severe allergic reaction (e.g., anaphylaxis) after a previous dose or to a component of an mRNA COVID-19 vaccine³ 	<ul style="list-style-type: none"> Diagnosed non-severe allergy (e.g., urticaria beyond the injection site) to a component of an mRNA COVID-19 vaccine⁴; or non-severe, immediate (onset within 4 hours) allergic reaction after administration of a previous dose of either mRNA COVID-19 vaccine Myocarditis or pericarditis within 3 weeks after a dose of any COVID-19 vaccine Multi-system inflammatory syndrome in children (MIS-C) or multisystem inflammatory syndrome in adults (MIS-A) Moderate or severe acute illness, with or without fever
COVID-19 protein subunit vaccine (Novavax)	<ul style="list-style-type: none"> Severe allergic reaction (e.g., anaphylaxis) after a previous dose or to a component of a Novavax COVID-19 vaccine⁵ 	<ul style="list-style-type: none"> Diagnosed non-severe allergy (e.g., urticaria beyond the injection site) to a component of Novavax COVID-19 vaccine⁶; or non-severe, immediate (onset less than 4 hours) allergic reaction after administration of a previous dose of a Novavax COVID-19 vaccine Myocarditis or pericarditis within 3 weeks after a dose of any COVID-19 vaccine Multi-system inflammatory syndrome in children (MIS-C) or multisystem inflammatory syndrome in adults (MIS-A) Moderate or severe acute illness, with or without fever
Influenza, egg-based, inactivated/injectable (RV4)	<ul style="list-style-type: none"> Severe allergic reaction (e.g., anaphylaxis) after previous dose of any influenza vaccine (i.e., any egg-based IIV, cQIV, RV, or LAIV of any valency) Severe allergic reaction (e.g., anaphylaxis) to any vaccine component⁷ (excluding egg) 	<ul style="list-style-type: none"> Gullain-Barré syndrome (GBS) within 6 weeks after a previous dose of any type of influenza vaccine Moderate or severe acute illness with or without fever
Influenza, cell culture-based inactivated/injectable (cQIV) (Fluceivax Quadrivalent)	<ul style="list-style-type: none"> Severe allergic reaction (e.g., anaphylaxis) to any cQIV of any valency, or to any component of cQIV 	<ul style="list-style-type: none"> Gullain-Barré syndrome (GBS) within 6 weeks after a previous dose of any type of influenza vaccine Persons with a history of severe allergic reaction (e.g., anaphylaxis) after a previous dose of any egg-based IIV, RV, or LAIV of any valency. If using cQIV, administer in medical setting under supervision of health care provider who can recognize and manage severe allergic reactions. May consult an allergist. Moderate or severe acute illness with or without fever
Influenza, recombinant inactivated/injectable (RV4) (Flublok Quadrivalent)	<ul style="list-style-type: none"> Severe allergic reaction (e.g., anaphylaxis) to any RIV of any valency, or to any component⁸ of RV4 	<ul style="list-style-type: none"> Gullain-Barré syndrome (GBS) within 6 weeks after a previous dose of any type of influenza vaccine Persons with a history of severe allergic reaction (e.g., anaphylaxis) after a previous dose of any egg-based IIV, cQIV, or LAIV of any valency. If using RV4, administer in medical setting under supervision of health care provider who can recognize and manage severe allergic reactions. May consult an allergist. Moderate or severe acute illness with or without fever
Influenza, live attenuated (LAIV) (Flumist Quadrivalent)	<ul style="list-style-type: none"> Severe allergic reaction (e.g., anaphylaxis) after previous dose of any influenza vaccine (i.e., any egg-based IIV, cQIV, RV, or LAIV of any valency) Child or adolescent with a history of asthma or wheezing Anatomic or functional asplenia Immunocompromised due to any cause including, but not limited to, medications and HIV infection Close contacts or caregivers of severely immunosuppressed persons who require a protected environment Pregnancy Cochlear implant Active communication between the cerebrospinal fluid (CSF) and the oropharynx, nasopharynx, nose, ear or any other cranial CSF leak Children and adolescents receiving aspirin or salicylate-containing medications Receiving an immunosuppressive drug or biologic within the previous 48 hours, or receiving a live virus vaccine or bivalent or monovalent within the previous 17 days 	<ul style="list-style-type: none"> Gullain-Barré syndrome (GBS) within 6 weeks after a previous dose of any type of influenza vaccine Persons in persons age 5 years old or older Persons with conditions other than those listed under contraindications that might predispose to complications after wild-type influenza virus infection, e.g., chronic pulmonary, cardiovascular (except isolated hypertension), renal, hepatic, neurologic, hematologic, or metabolic disorders (including diabetes mellitus) Moderate or severe acute illness with or without fever

1. When a contraindication is present, a vaccine should **NOT** be administered. Kroger A, Bahta L, Hunter P. *ACIP General Best Practice Guidelines for Immunization*.

2. When a precaution is present, vaccination should generally be deferred but might be indicated if the benefit of protection from the vaccine outweighs the risk for an adverse reaction. Kroger A, Bahta L, Hunter P. *ACIP General Best Practice Guidelines for Immunization*.
 3. Vaccine providers should check FDA-approved prescribing information for the most complete and updated information, including contraindications, warnings, and precautions. See [package inserts for U.S. licensed vaccines](#).
 4. See [package inserts and FDA EUA fact sheets](#) for a full list of vaccine ingredients. mRNA COVID-19 vaccines contain polyethylene glycol (PEG).

Vaccines and other immunizing agents

Vaccine	Contraindicated or Not Recommended ¹	Precautions ²
Dengvaxia (DENVAXIO)	<ul style="list-style-type: none"> Severe allergic reaction (e.g., anaphylaxis) after a previous dose or to a vaccine component¹ Severe immunodeficiency (e.g., hematologic and solid tumors, receipt of chemotherapy, congenital immunodeficiency, long-term immunosuppressive therapy or patients with HIV infection who are severely immunocompromised) Use of a secondary course of dengvaxia during the same visit 	<ul style="list-style-type: none"> Pregnancy HIV infection without evidence of severe immunosuppression Moderate or severe acute illness with or without fever
Diphtheria, tetanus, pertussis (DTaP)	<ul style="list-style-type: none"> Severe allergic reaction (e.g., anaphylaxis) after a previous dose or to a vaccine component¹ Severe immunodeficiency (e.g., congenital immunodeficiency, long-term immunosuppressive therapy or patients with HIV infection who are severely immunocompromised) For DTaP only: Encephalopathy (e.g., coma, decreased level of consciousness, prolonged seizures) not attributable to another identifiable cause within 7 days of administration of previous dose of DTaP or DtaP 	<ul style="list-style-type: none"> Gullian-Barre syndrome (GBS) within 6 weeks after previous dose of diphtheria, tetanus, and pertussis vaccine or tetanus-toad-containing vaccine; diphtheria vaccination until at least 10 years have elapsed since that event For DTaP only: History of neurologic disorder, including inpatient spasms, uncontrolled epilepsy, progressive myoclonic epilepsy, or other progressive neurologic disorder Moderate or severe acute illness with or without fever
Hemophilus influenzae type b (Hib)	<ul style="list-style-type: none"> Severe allergic reaction (e.g., anaphylaxis) after a previous dose or to a vaccine component¹ Less than 30 days weeks 	<ul style="list-style-type: none"> Moderate or severe acute illness with or without fever
Hepatitis A (HepA)	<ul style="list-style-type: none"> Severe allergic reaction (e.g., anaphylaxis) after a previous dose or to a vaccine component¹ including necrotic colitis Severe immunodeficiency (e.g., congenital immunodeficiency, long-term immunosuppressive therapy or patients with HIV infection who are severely immunocompromised) For HepA only: History of acute hepatitis B or acute or chronic hepatitis B 	<ul style="list-style-type: none"> Moderate or severe acute illness with or without fever
Hepatitis A Hepatitis B vaccine (HepA/HepB) (Twintik)	<ul style="list-style-type: none"> Severe allergic reaction (e.g., anaphylaxis) after a previous dose or to a vaccine component¹ including necrotic colitis Severe immunodeficiency (e.g., congenital immunodeficiency, long-term immunosuppressive therapy or patients with HIV infection who are severely immunocompromised) For HepA only: History of acute hepatitis B or acute or chronic hepatitis B 	<ul style="list-style-type: none"> Moderate or severe acute illness with or without fever
Human papillomavirus (HPV)	<ul style="list-style-type: none"> Severe allergic reaction (e.g., anaphylaxis) after a previous dose or to a vaccine component¹ Pregnancy; HPV vaccination not recommended 	<ul style="list-style-type: none"> Moderate or severe acute illness with or without fever
Meningitis, meningitis, mumps, measles (MMV2)	<ul style="list-style-type: none"> Severe allergic reaction (e.g., anaphylaxis) after a previous dose or to a vaccine component¹ Severe immunodeficiency (e.g., congenital immunodeficiency, long-term immunosuppressive therapy or patients with HIV infection who are severely immunocompromised) Pregnancy Family history of altered immunocompetence, unless verified clinically by laboratory testing as immunocompetent 	<ul style="list-style-type: none"> Recent (1 month) receipt of antibody-containing blood product (specific interval depends on product) History of tuberculin skin testing or interferon gamma release assay (IGRA) testing Need for tuberculin skin testing or interferon gamma release assay (IGRA) testing Moderate or severe acute illness with or without fever For MMV2 only: Febrile or family febrile, illness of parent/family history of seizures of any etiology
Meningococcal ACWY (MenACWY)	<ul style="list-style-type: none"> Severe allergic reaction (e.g., anaphylaxis) after a previous dose or to a vaccine component¹ For Men ACWY only: Severe allergic reaction to any diphtheria-toad- or CRM197-containing vaccine For Men ACWY only: History of Guillain-Barre syndrome (GBS) within 6 weeks after previous dose 	<ul style="list-style-type: none"> For Men ACWY only: Pre-term birth (less than age 9 months) Moderate or severe acute illness with or without fever
Meningococcal B (MenB)	<ul style="list-style-type: none"> Severe allergic reaction (e.g., anaphylaxis) after a previous dose or to a vaccine component¹ 	<ul style="list-style-type: none"> For MenB only: Latex sensitivity Moderate or severe acute illness with or without fever
MenB-HP (Trumenb)	<ul style="list-style-type: none"> Severe allergic reaction (e.g., anaphylaxis) after a previous dose or to a vaccine component¹ 	<ul style="list-style-type: none"> Moderate or severe acute illness with or without fever
Meningococcal ACWY MenB-HP (MenB-HP) (Trumenb)	<ul style="list-style-type: none"> Severe allergic reaction (e.g., anaphylaxis) after a previous dose or to a vaccine component¹ Severe allergic reaction to tetanus-toad-containing vaccine 	<ul style="list-style-type: none"> Moderate or severe acute illness with or without fever
Morax (Synoviol)	<ul style="list-style-type: none"> Severe allergic reaction (e.g., anaphylaxis) after a previous dose or to a vaccine component¹ 	<ul style="list-style-type: none"> Moderate or severe acute illness with or without fever
Pneumococcal conjugate (PCV)	<ul style="list-style-type: none"> Severe allergic reaction (e.g., anaphylaxis) after a previous dose or to a vaccine component¹ 	<ul style="list-style-type: none"> Moderate or severe acute illness with or without fever
Pneumococcal polysaccharide (PPSV23)	<ul style="list-style-type: none"> Severe allergic reaction (e.g., anaphylaxis) after a previous dose or to a vaccine component¹ 	<ul style="list-style-type: none"> Moderate or severe acute illness with or without fever
Poliiovaccine, inactivated (IPV)	<ul style="list-style-type: none"> Severe allergic reaction (e.g., anaphylaxis) after a previous dose or to a vaccine component¹ 	<ul style="list-style-type: none"> Moderate or severe acute illness with or without fever
RSV monoclonal antibody (Sivumab)	<ul style="list-style-type: none"> Severe allergic reaction (e.g., anaphylaxis) after a previous dose or to a vaccine component¹ 	<ul style="list-style-type: none"> Moderate or severe acute illness with or without fever
Respiratory syncytial virus vaccine (RSV)	<ul style="list-style-type: none"> Severe allergic reaction (e.g., anaphylaxis) after a previous dose or to a vaccine component¹ 	<ul style="list-style-type: none"> Moderate or severe acute illness with or without fever
Rotavirus (RV)	<ul style="list-style-type: none"> Severe allergic reaction (e.g., anaphylaxis) after a previous dose or to a vaccine component¹ 	<ul style="list-style-type: none"> Abnormal stool Chronic gastrointestinal disease other than ICD RV1 only: Spina bifida or bladder extrophy
RV5 (Rotarix)	<ul style="list-style-type: none"> Severe allergic reaction (e.g., anaphylaxis) after a previous dose or to a vaccine component¹ Severe immunodeficiency (SCID) History of intussusception 	<ul style="list-style-type: none"> Chronic gastrointestinal bladder extrophy RV1 only: Spina bifida or bladder extrophy Moderate or severe acute illness with or without fever
RV5 (RotaShield)	<ul style="list-style-type: none"> Severe allergic reaction (e.g., anaphylaxis) after a previous dose or to a vaccine component¹ For RV5 only: History of intussusception 	<ul style="list-style-type: none"> Gullian-Barre syndrome (GBS) within 6 weeks after a previous dose of tetanus-toad-containing vaccine or tetanus-toad-containing vaccine; diphtheria vaccination until at least 10 years have elapsed since that event Intussusception Intussusception during the previous 2 weeks before vaccination, or progressive intussusception during the previous 2 weeks before vaccination Encephalopathy until a treatment regimen has been established and the condition has stabilized Moderate or severe acute illness with or without fever
Tetanus, diphtheria, and acellular pertussis (Tdap)	<ul style="list-style-type: none"> Severe allergic reaction (e.g., anaphylaxis) after a previous dose or to a vaccine component¹ For Tdap only: History of neurologic disorder, including inpatient spasms, uncontrolled epilepsy, or other progressive neurologic disorder For Tdap only: Encephalopathy (e.g., coma, decreased level of consciousness, prolonged seizures) not attributable to another identifiable cause within 7 days of administration of previous dose of DTaP, DtaP or Tdap 	<ul style="list-style-type: none"> Gullian-Barre syndrome (GBS) within 6 weeks after a previous dose of tetanus-toad-containing vaccine or tetanus-toad-containing vaccine; diphtheria vaccination until at least 10 years have elapsed since that event Intussusception Intussusception during the previous 2 weeks before vaccination, or progressive intussusception during the previous 2 weeks before vaccination Encephalopathy until a treatment regimen has been established and the condition has stabilized Moderate or severe acute illness with or without fever
Tetanus, diphtheria, and acellular pertussis (Td)	<ul style="list-style-type: none"> Severe allergic reaction (e.g., anaphylaxis) after a previous dose or to a vaccine component¹ Severe immunodeficiency (e.g., hematologic and solid tumors, receipt of chemotherapy, congenital immunodeficiency, long-term immunosuppressive therapy or patients with HIV infection who are severely immunocompromised) Pregnancy Family history of altered immunocompetence, unless verified clinically by laboratory testing as immunocompetent 	<ul style="list-style-type: none"> Recent (1 month) receipt of antibody-containing blood product (specific interval depends on product) Receipt of specific antitoxin drug (e.g., diphtheria antitoxin, antitoxin or waxydew) 24 hours before vaccination (avoid vaccination) Use of aspirin or aspirin-containing products Moderate or severe acute illness with or without fever
Varicella (VAR)	<ul style="list-style-type: none"> Severe allergic reaction (e.g., anaphylaxis) after a previous dose or to a vaccine component¹ Severe immunodeficiency (e.g., congenital immunodeficiency, long-term immunosuppressive therapy or patients with HIV infection who are severely immunocompromised) Pregnancy Family history of altered immunocompetence, unless verified clinically by laboratory testing as immunocompetent 	<ul style="list-style-type: none"> Family history; see also VZV/Varicella for additional precautions

1. When a contraindication is present, a vaccine should NOT be administered. Kroger A, Bhatti L, Hunter P, ACP General Best Practice Guidelines for Immunization. www.acponline.org/immunization, 2019.

2. Immunization. www.cdc.gov/vaccines/imz-manual/ndc/index.html

3. Vaccination provides should check FDA approved prescribing information for the most complete and updated information, including contraindications, warnings, and precautions. Package inserts for US-licensed vaccines are available at www.fda.gov/oc/ohrt/immunization

4. For information on the pregnancy exposure registry for persons who were inadvertently vaccinated with HepA/HepB or PreHeb while pregnant, please visit hepatitisb.gsa.gov/registry or www.nprh.nih.gov/health

5. For full prescribing information for BEYFORTUS, please visit www.cdc.gov/od/oc/docs/default-content/bev-fortus-2023-07-01-23-08-2003-fda.pdf

Addendum

Recommended Child and Adolescent Immunization Schedule for Ages 18 Years or Younger, United States, 2024

In addition to the recommendations presented in the previous sections of this immunization schedule, ACP has approved the following recommendations by majority vote since October 26, 2023. The following recommendations have been adopted by the CDC Director and are now official. Links are provided if these recommendations have been published in *Morbidity and Mortality Weekly Report (MMWR)*.

Vaccines

Recommendations

No new vaccines or vaccine recommendations to report

Effective Date of Recommendation*

*The effective date is the date when the CDC director adopted the recommendation and when the ACP recommendation became official.
