DoD HEALTHCARE MANAGEMENT SYSTEM MODERNIZATION

DHMS
Program Executive Office

The mission of the DoD Healthcare Management System Modernization Program Management Office is to competitively acquire, test, deliver, integrate, and successfully transition to a state-of-the-market electronic health record system.

PROGRAM MANAGEMENT OFFICE OVERVIEW

The DoD Healthcare Management System Modernization (DHMSM®) Program Management Office oversees the deployment of MHS GENESIS as well as the operations and sustainment of the Joint Longitudinal Viewer (JLV). In partnership with the Defense Health Agency, the military services, and industry, DHMSM continually refines a deployment and sustainment plan to optimize the delivery of MHS GENESIS, the Department of Defense's electronic health record (EHR).

Select Military Health System (MHS) legacy clinical systems including AHLTA, Composite Health Care System (CHCS), inpatient, and clinical components of the Theater Medical Information Program-Joint (TMIP-J) will be replaced during the implementation of MHS GENESIS. During MHS GENESIS deployment, personnel will maintain their connections to these legacy systems via JLV.

DHMSM effectively manages business operations, testing, systems engineering, future requirements, deployment, change management, communications, training, and legacy operations. This will ensure a successful deployment of MHS GENESIS to a complex and globally dispersed enterprise, with minimal disruption to the military healthcare community and beneficiaries.

BENEFITS OF MHS GENESIS

Facilitates the safe transition of care across the spectrum of military operations, including garrison, operational, and en route care, through a proven commercial EHR

Supports our medical and dental communities in providing world-class healthcare delivery for service members, their families, and our allies across the globe by integrating, testing, and deploying a modernized EHR

Provides our healthcare communities with the ability to monitor a beneficiary's health status through greater population health data, tracking, and alerting capabilities

Provides healthcare professionals and patients with the latest advancements in technology

BENEFITS OF JLV

Faster and more complete understanding of patient health status

Supports Department of Defense, Veterans Health Administration, Veterans Benefits Administration, U.S. Coast Guard, and Military Entrance Processing Command

Easy to learn, easy to use, graphical user interface
