

(Prepare) Introductory Email

SUBJECT: MHS GENESIS and Our MTF

ALCON:

As many of you are aware, the Military Health System (MHS) is changing, and changing fast. We too will experience the change, as we prepare to welcome MHS GENESIS as our new electronic health record (EHR). According to the deployment schedule, our military treatment facility (MTF) will soon implement MHS GENESIS, and it's important that we begin to prepare for what's ahead.

We will transition from AHLTA and our other medical and dental records systems to MHS GENESIS, the modernized EHR for the Department of Defense (DoD). MHS GENESIS is already deployed at several established sites, and lessons learned were used to guide future implementations to include ours. In the coming weeks and for the next several months, I intend to communicate with you – and communicate as often as possible to keep you aware of progress related to our MHS GENESIS deployment. As a valued member of our medical community, you are at the front-line of care for our patients and I am committed to helping you be successful during this time.

This is a milestone for us in the MHS, and we will work together to realize and achieve success in this new era of military health care. MHS GENESIS is aligned with legislation from Congress, but also offers us a world of possibilities.
