A World Health Organization (WHO) document titled "DHA-IHD Clinical Guidelines for Adverse Event following Smallpox Vaccine: Contact Transmission (non-ocular) — new lesion(s) following close contact with Smallpox Vaccinee." The document contains a flowchart with decision-making steps for assessing adverse events after smallpox vaccination. The flowchart includes questions such as:

- Close contact with Smallpox Vaccine vaccinee within the past 30 days?
- Contact is considered high risk for smallpox vaccine (SPV) adverse events?
- New onset lesion(s) appearing at least 4 days following exposure?
- Lesions in a localized area?
- Lesions near or in the eye?
- Lesions appear in any one of the following stage: papules, vesicles, pustules, or scab?

The document also provides references for lab specimens, consultations, and guidelines for managing adverse events. The guidelines emphasize the importance of evaluating for other etiologies, considering potential serious adverse events, and referring to specific guidelines for ocular contact transmission. The document includes a version reference dated May 26, 2016.
