# Centralized Credentials Quality Assurance System

## SUPPORTING MEDICAL PERSONNEL READINESS

**Centralized Credentials Quality Assurance System (CCQAS) is a web-based worldwide credentialing, privileging, risk management and adverse actions application that supports more than 105,000 professionals providing health and wellness services to active duty military personnel, their families and selected retirees.**

CCQAS enables the military medical community to electronically manage provider credentialing and privileging, malpractice and disability claims and adverse action investigations of physicians, dentists, nurses, pharmacists, and other medical support personnel. CCQAS supports personnel at all levels of DoD with credentialing and privileging activities by optimizing the accuracy and efficiency of these activities. It improves the ability of the Services to respond to medical readiness requirements. CCQAS contains robust standard and ad hoc reporting capabilities to facilitate data-driven business intelligence and meets DoD and The Joint Commission accreditation requirements.

## Key Capabilities

▸ Maintains and tracks the credentialing and privileging history of all military and civilian health care providers

▸ Contains comprehensive demographic, specialty, licensing, training, education, privileges, assignment history, and photographs for identification purposes

▸ Automates the review and approval of an application for receiving and renewal of privileges

▸ Expedites the transfer of credentialing and privileging information for temporary change of assignment

## Key Benefits

▸ Enables providers to complete and submit an application for clinical privileges online

▸ Allows for the electronic workflow for review, routing and approval of provider privileges

▸ Standardizes Tri-Service business processes through the creation of a master privilege list
