FACT SHEET
DML-ES — SAP
DEFENSE MEDICAL LOGISTICS-ENTERPRISE SOLUTION

DHA Defense Health Agency ®
SOLUTION DELIVERY DIVISION

DML-ES — SAP, formerly known as Theater Enterprise-Wide Logistics System, is an information technology capability within the DML-ES portfolio.

DML-ES — SAP streamlines inventory management to make the delivery of health care to beneficiaries more efficient.

DML-ES is the program and portfolio name for all medical logistics information technology applications. DML-ES — SAP is a centralized capability supporting Military Health System operational logistics functions. It provides the following business level functions:

- Medical depot operations
- Life cycle medical kit management
- Combat developer planning
- Supply chain distribution

This integrated application standardizes information and provides visibility across programs. DML-ES — SAP also supports joint and coalition forces and relieves tactical units from complex processes of inventory management and supplier relationships.

DML-ES — SAP will fully transition to LogiCole by November 2026. LogiCole moves all legacy MEDLOG applications, including DML-ES — SAP, into a single, web-based application.

Key Features

▸ Consolidates multiple MEDLOG functions into a single portal

▸ Provides materiel distribution and transportation management, medical life cycle assemblage management, and depot level bio-medical maintenance management

▸ Implements just-in-time logistics, eliminating large stocks of inventory

▸ Provides real-time enterprise-level view of assets

Key Benefits

▸ Replaces several legacy systems

▸ Standardizes multiple MEDLOG functions

▸ Supports Combatant Commander's MEDLOG requirements

▸ Facilitates Defense Health Agency's compliance with federal standards
