

DML-ES-SAP, formerly known as Theater Enterprise-Wide Logistics System, is an information technology capability within the DML-ES portfolio.

DML-ES is the program and portfolio name for all medical logistics technology applications.

DML-ES-SAP streamlines inventory management, enhancing the efficiency of health care delivery to beneficiaries. This centralized capability supports Military Health System operational logistics functions and provides the following:

- Medical depot operations
- Life cycle medical kit management
- Combat developer planning
- Supply chain distribution

This integrated application standardizes information and provides visibility across programs. DML-ES-SAP also supports joint and coalition forces and relieves tactical units from complex processes of inventory management and supplier relationships.

DML-ES-SAP will fully transition to LogiCole by August 2025. LogiCole moves all legacy MEDLOG applications, including DML-ES-SAP, into a single, web-based application.

## Key Features

- Consolidates multiple MEDLOG functions into a single portal
- Provides materiel distribution and transportation management, medical life cycle assemblage management, and depot level biomedical maintenance management
- Implements just-in-time logistics, eliminating large stocks of inventory
- Provides real-time enterprise-level view of assets

## Key Benefits

- Replaces several legacy systems
- Standardizes multiple MEDLOG functions
- Supports Combatant Commander's MEDLOG requirements
- Facilitates Defense Health Agency's compliance with federal standards

This program is managed by the **Solution Delivery Division** Medical Logistics Information Technology Program Management Office.
