

BCS solution leverages software and services to transform data into actionable intelligence for strategic and tactical business decisions.

BCS tools generate analytical reports and summaries, offering developers, end-users, and Defense Health Agency user communities detailed intelligence about a system's status. This enables informed decision-making using real-time insights from a single, scalable platform.

Background

The BCS product is a secure model that uses the Solution Delivery Division's Identity Authentication Services, Enterprise Common Access Card Registration Service, and Automated Access Request Form for user registration and authentication.

Projects that use BCS Reporting Services include, but are not limited to, the following:

- Defense Medical Human Resources System-Internet, Data-Fidelity Reporting (DMHRSi DDR)
- Defense Occupational and Environmental Health Readiness System-Industrial Hygiene (DOEHRS-IH)
- Defense Occupational and Environmental Health Readiness System-Hearing Conservation (DOEHRS-HC)
- Expense Assignment System IV (EAS IV)
- Health Artifact and Image Management Solution (HAIMS)
- Military Health System Management Analysis and Reporting Tool MHS MART or M2
- Service Treatment Record Processing Operations Reporting Tracking Solution (SPORTS)

Key Features

- Uses Web Intelligence tool for analyses, reports, and other queries
- Allows secure access based upon assigned user roles
- Graphical interface allows users to select and view data in table format
- Connects local CSV, TXT, XLS and XLSX data sources

Key Benefits

- Enables customizable appearance and functionality of an organization's intranet component
- Aggregates large sums of data into digestible tables to meet specific analytic needs in a shareable format
- Allows review of high-level trends and details in one place using drag-and-drop reporting elements

BCS is managed by the **Solution Delivery Division** Technology Support Branch.
