

IAS is an authentication and authorization suite that supplies a robust mechanism for secure Public Key Infrastructure services within the Military Health System. IAS protects access to authorized systems and beneficiary information.

IAS functional capabilities include or support:

- Enterprise Public Key Infrastructure Authentication and Single Sign-On via
 - Department of Defense Common Access Card
 - Department of Veterans Affairs Personal Identity Verification Card
 - Federal Agencies Personal Identity Verification Card
- DOD External Certification Authority Certificates
- User Authorization and Privilege Management
- User Attribute Lookup
- Biometric login on mobile devices and tablets for My Military Health:
 - SilverCloud Self-Help Wellness application
 - On-Demand Virtual Visits application

Key Features

- Enhanced user authentication and identity verification processes
- Customizable authorization and privilege management workflow capability
- Integrates with Defense Manpower Data Center Logon service
- High-performance system built on scalable architecture

Key Benefits

- Processes are fully automated
- Reduces cost of maintenance due to centralized hosting and management
- Generates audit and tracking reports
- Supports user lookup via DMDC

IAS is managed by the **Solution Delivery Division** Technology Support Branch.
