SECTION 1: PII DESCRIPTION SUMMARY (FOR PUBLIC RELEASE)

a. The PII is: (Check one. Note: Federal contractors, military family members, and foreign nationals are included in general public.)

- ☐ From members of the general public ☐ From Federal employees
- ☒ from both members of the general public and Federal employees ☐ Not Collected (if checked proceed to Section 4)

c. Describe the purpose of this DoD information system or electronic collection and describe the types of personal information about individuals collected in the system.

The Pharmacy Outpatient Automation Solution - Parata (POAS-P) consists of the Parata Max, Parata Mini, and Pharmacy 2000 (P2K). The system is developed with the goal of providing safer and more efficient patient care through the use of automation and innovative product design.

Parata Max and Parata Mini are medication dispensing devices that use the same technology. The Parata Max unit labels a vial with appropriate patient and prescription information, counts the correct number of the prescribed medication into the vial, and caps the vial. The Parata Mini unit counts and dispenses prescribed medication into chutes for the Pharmacy Technician to remove and place into vials. Throughout this document, the term "Max/Mini" will be used to reference both the Parata Max and the Parata Mini systems, except where specifically indicated.

Pharmacy 2000 (P2K) is a workflow management software system for pharmacies. It provides prescription imaging, filling and checking functions, and can integrate with a variety of pharmacy automation including Parata Max, Parata Mini.

FlexCheck is a built-in Pharmacy 2000 module that enables any pharmacist within a Pharmacy 2000 network to verify prescriptions and provide remote patient consultation for other pharmacy site within that same MTF's network. It's the only remote verification solution that can connect multiple remote sites to multiple verification sites over secure MTF network, greatly increasing pharmacist utilization and support for workflow balancing (until FY24).

The types of Personally Identifiable Information (PII) collected in the system include patient name, home address, and medical information: Prescribed Drugs.

d. Why is the PII collected and/or what is the intended use of the PII? (e.g., verification, identification, authentication, data matching, mission-related use, administrative use)

PII is collected to enable and support mission related patient care. PII is used in verification and identification to ensure that a prescription is provided to the correct patient, in the correct form, and at the correct dose.

e. Do individuals have the opportunity to object to the collection of their PII? ☐ Yes ☒ No

(1) If "Yes," describe the method by which individuals can object to the collection of PII.

(2) If "No," state the reason why individuals cannot object to the collection of PII.

POAS-P does not collect PII directly from the patient - it is not the source system. POAS-P receives all PII from MHS GENESIS.

f. Do individuals have the opportunity to consent to the specific uses of their PII? ☐ Yes ☒ No

(1) If "Yes," describe the method by which individuals can give or withhold their consent.

(2) If "No," state the reason why individuals cannot give or withhold their consent.
