Link Resolver   July 13, 2015

The databases with journal coverage, i.e., OVID, ProQuest, and EBSCO databases, have a new linking feature. You can access the full text of an article even when the database you are in does not offer the full text. This icon appears when either the article itself is available via another database which you have access to or it will link you to Order Documents from DMVL.

If the article is not available through the DMVL, you can send a request to us for document delivery.   The link resolver pastes the full citation into the request for you. All you have to do is fill in your name and email and then click on "send".

PubMed users---If you like to search via PubMed, this icon will also appear if you enter PubMed via the option 'Search PubMed@DMVL'.   The option 'Search PubMed@DMVL' is on the main page on the right upon entering the DMVL.
