DEPARTMENT OF DEFENSE (AFHS)

West Africa Ebola Surveillance Summary #125

12 NOV 2015 (next report 19 NOV 2015)

CASE REPORT: WHO declared Sierra Leone to be Ebola transmission-free on 7 NOV after 42 days had passed with no new cases. Sierra Leone joins Liberia in a 90-day period of heightened surveillance. Liberia was declared free of Ebola on 3 SEP.

According to [WHO on 11 NOV](#), between 2 NOV and 8 NOV there were no new confirmed Ebola virus disease (EVD) cases in Guinea. The four Guinea cases reported in the previous two weeks are all members of the same family and 69 contacts are being followed. The total count of 28,635 cases (11,314 deaths) includes past confirmed, suspected, and probable cases and all deaths from Sierra Leone, Liberia, Italy, Senegal, Nigeria, United Kingdom, Spain, Mali, and the United States. As a result of the consistently low incidence in limited geographic areas, WHO considers the West Africa epidemic to be in a [phase 3 response](#), which implements specific actions to achieve and maintain zero virus transmission.

[According to WHO](#), a growing volume of data from clinical observation and testing of recovered EVD patients indicates that the Ebola virus can persist at various sites in the body for many months in some people. [CDC has posted information on persistent medical conditions after recovery from EVD](#). A [study](#) published on 27 OCT in EID, reported a single case of late-onset encephalitis and polyarthritis associated with persistent Ebola virus infection in a patient in Sierra Leone whose serum had tested Ebola virus negative by PCR. [The Scottish nurse who recovered from EVD and then suffered late complications from a persistent infection continues to improve and was released from a London hospital to a hospital near her home in Glasgow on 9 NOV](#).

On 1 OCT, WHO's seventh [Emergency Committee meeting](#) on the EVD outbreak agreed that the outbreak continued to constitute a Public Health Emergency of International Concern (PHEIC) and proposed new temporary recommendations that would supersede those previously issued.

DoD RESPONSE: On 10 AUG, the Deputy Secretary of Defense signed a [memorandum](#) declaring that DoD needs to maintain the capability to operate in an infectious disease environment in the future. The memorandum extends for at least one year following the 30 JUN 2015 end of OUA selected DoD policies and EVD-related responsibilities, including those related to health surveillance, personal protective equipment, medical treatment for deployed DoD personnel, and transport of exposed or infected DoD personnel. DoD personnel continue to provide support to the Liberian Institute of Biomedical Research.

DIAGNOSTICS AND MEDICAL COUNTERMEASURES: Visit the WHO's [Ebola vaccines, therapies, and diagnostics](#) page for information about clinical trials and evaluations of potential vaccines, therapies, and diagnostics for Ebola virus disease.

USG AND GLOBAL RESPONSE: Current information and guidance is available at the [CDC](#) and [WHO](#) Ebola web sites.

TRAVEL ADVISORY: On 2 NOV, CDC lowered its travel warning for Sierra Leone to [Alert - Level 2, Practice Enhance Precautions](#). CDC is maintaining its [Warning - Level 3, Avoid Nonessential Travel](#) advisory for Guinea. The advisory level for Liberia is [Watch - Level 1, Practice Usual Precautions](#). The State Department issued an [updated travel notice](#) for West Africa on 21 SEP when CDC announced that [enhanced entry screening was discontinued](#) for travelers coming to the U.S. from Liberia. These travelers will no longer be funneled through the five U.S. airports [conducting enhanced entry screening](#) (JFK, Newark Liberty, Washington Dulles, Chicago O'Hare, and Atlanta Hartsfield-Jackson). [As of 10 NOV](#), CDC recommends that travelers from Liberia and Sierra Leone self-monitor for fever or other symptoms of Ebola for 21 days after departure. Recommendations and procedures have not changed for travelers entering the United States from Guinea; CDC recommends that state public health departments implement active post-arrival monitoring for 21 days along with other movement restrictions based on a traveler's exposure risk category using CDC definitions for travelers from Guinea.

Total (8 NOV)	28,635 (+28) / 15,246	11,314 / 5,685†	900 / 520	69

†Excluding Liberia / *Imported from Liberia / **1 imported from Guinea / ***Imported from Sierra Leone / NA = Not Available.

Shaded rows represent countries which have been declared Ebola transmission-free by WHO.

The total number of cases, which includes suspect, probable, and confirmed cases, is subject to change due to reclassification, retrospective investigation, consolidation of cases and laboratory data, and enhanced surveillance.

Text updated from the previous report will be printed in red; items in (+xx) represent the change in number from the previous AFHS summary (5 NOV 2015).

All information has been verified unless noted otherwise. Sources include WHO, CDC, and health agencies in Guinea, Liberia, Sierra Leone, Mali, and the UK.
