

DEPARTMENT OF DEFENSE (AFHSB) Seasonal Influenza Surveillance Summary

Northern Command -- Week 10 (05 Mar 2017—11 Mar 2017)

In NORTHCOM during week 10^{1,2}

- ◆ Influenza activity decreased to minimal to low for most of the country.
- ◆ The percentage of outpatient visits due to ILI decreased slightly and was below previous seasons, but above baseline.
- ◆ The percentage of positive lab tests remained stable at 15.3% for service members and 26.9% for beneficiaries.
- ◆ A/H3N2 continued to predominate over A/H1N1.
- ◆ One other beneficiary influenza hospitalization (RMEs) was reported for week 10.

NORTHCOM Service Members, Influenza Activity and Virus Subtype, During the Last 2 Weeks

NORTHCOM Beneficiaries, Influenza Positive Specimens Reported to AFHSB

NORTHCOM Service Members, Influenza Positive Specimens Reported to AFHSB

2016 – 2017 NORTHCOM Season Totals^{1,2}

	A/H1N1	A/H3N2	A/Untyped	Flu B	AB	Overall %
Service Members	16	322	1039	169	14	13.28
Dependents	97	1422	6778	1851	148	20.14

NORTHCOM Service Members, 2016-2017 and Previous 2 Influenza Seasons
ILI Outpatient Visits

- ◆ NHRC laboratory-confirmed influenza cases, US Military Basic Trainees: As of Week 09

	Week 09 ³				2016 – 2017 Recruit Season Totals ³				No. Tested
	A/H1N1	A/H3N2	A/unsubtyped	Flu B	A/H1N1	A/H3N2	A/unsubtyped	Flu B	
Ft Benning						9			107
Ft Jackson		1				10		1	118
Ft Leonard Wood		1				5			25
NRTC Great Lakes						9		2	74
Lackland AFB									14
MCRD Parris Island						15			52
MCRD San Diego						9	1		131
CGTC Cape May									61

**European Command -- Week 10**In EUCOM during week 10^{4,5}

- ◆ Influenza activity was minimal across EUCOM.
- ◆ The percentage of outpatient visits due to ILI continued to decrease and dropped below previous seasons and baseline.
- ◆ The percentage of positive lab tests remained high at 25.0% for service members and dropped to 15.4% for beneficiaries for week 10.
- ◆ A/H3N2 continued to predominate over A/H1N1.
- ◆ One other beneficiary influenza hospitalization (RMEs) was reported for week 10.

EUCOM Service Members, Influenza Activity and Virus Subtype, During the Last 2 Weeks

EUCOM Service Members, Influenza Positive Specimens Reported to AFHSB

EUCOM Beneficiaries, Influenza Positive Specimens Reported to AFHSB

EUCOM Service Members, 2016-2017 and Previous 2 Influenza Seasons
ILI Outpatient Visits**2016-2017 EUCOM Season Totals^{1,4,5}**

	A/H1N1	A/H3N2	A/Untyped	Influenza B	AB	Overall % Positive
Service Members	0	92	34	6	2	20.06
Dependents	2	153	74	5	1	19.73

**Pacific Command -- Week 10**In PACOM during week 10^{1,6,7}

- ◆ Influenza activity remained minimal in Japan and Guam, but low activity was seen for the ROK and Hawaii.
- ◆ The percentage of outpatient visits due to ILI decreased and dropped below baseline and previous seasons.
- ◆ The percentage of positive lab tests decreased to 2.0% for service members, but remained high at 27.0% for other beneficiaries during week 10.
- ◆ Among the influenza A specimens subtyped, A/H3N2 continued to be the predominating subtype.

PACOM Service Members, Influenza Activity and Virus Subtype, During the Last 2 Weeks
South Korea and Japan**PACOM: Guam and Hawaii Influenza Activity and HL7 Test Positive (MAP: SM+BN, 2 wks)**

Area Name	Influenza Activity	HL7 Type				
		A(H1)	A(H3)	A Untyped	B	AB
Guam	Minimal	0	0	0	1	0
Hawaii*	Low	0	8	12	21	1

*Hawaii HL7 Type counts may include samples received from Guam, but tested in Hawaii

PACOM Service Members, Influenza Positive Specimens Reported to AFHSB

PACOM Beneficiaries, Influenza Positive Specimens Reported to AFHSB

**2016-2017 PACOM Season Totals^{1,6,7}**

	A/H1N1	A/H3N2	A/Untyped	Flu B	Flu AB	Overall % Positive
Service Members	0	54	70	9	1	12.50
Dependents	10	155	229	80	3	25.36

**Central and Africa Commands -- Week 10**

In CENTCOM and AFRICOM during week 10^{1,8}

- ◆ Influenza activity was minimal for locations with available data in CENTCOM and AFRICOM.
- ◆ The percentage of outpatient visits due to ILI continued to decrease and remained below baseline and previous seasons.

CENTCOM, Influenza Activity, During the Last 2 Weeks

**Southern Command -- Week 10**

In SOUTHCOM during week 10⁹

- ◆ Influenza activity was minimal in Honduras this week based on DMSS data.

¹AFHSB, ²USAFSAM, ³NHRC, ⁴LRMC, ⁵PHCR-E, ⁶AFRIMS, ⁷NMRC-A, ⁸NAMRU-3, ⁹NAMRU-6

Description:

Maps, figures and tables are stratified by Combatant Commands (CCMD). The map provides a measure of influenza activity by state or country within each CCMD for the past two weeks for service members. Influenza activity is defined by the percentage of outpatient visits associated with an Influenza-like Illness (ILI) for each week compared to baseline levels of influenza activity. Additionally, a pie graph by US region or country is generated to display the distribution of influenza types and subtype identified from positive laboratory tests for the past two weeks combined.

Influenza activity: Percentage of Outpatient Visits Associated with ILI:

The percentage of all outpatient visits for ILI is calculated each week for all service members, regardless of component. These data are presented as a map of the past two weeks' activity and a figure to display the entire season's data compared to the two prior seasons and baseline. For the map, the activity level compares the mean reported percent of visits due to ILI for the past two weeks to the mean reported percent of visits due to ILI during baseline weeks. Baseline weeks are defined as non-influenza weeks (weeks 22-39) over the past 3 years.

There are four activity levels reported on each map. The activity level corresponds to the number of standard deviations (SD) below, at or above the mean for the current week compared to the mean of the baseline weeks. Activity levels are classified as minimal, low, moderate, and high. Minimal activity corresponds to an influenza percentage that is less than 2 SD above the mean. Low activity corresponds to an influenza percentage that is equal to or greater than 2 SD above the mean, but less than 4 SD above the mean. Moderate activity corresponds to an influenza percentage that is equal to or greater than 4 SD above the mean, but less than 6 SD above the mean. High activity corresponds to an influenza percentage that is equal to or greater than 6 SD above the mean.

Influenza Positive Specimens:

Lab results from PCR, viral culture, and rapid influenza assays are reported. Although the inclusion of rapid tests may underestimate the weekly and cumulative percent positive estimates due to false negatives, visibility of the positive rapid results provides valuable information for this surveillance report. Influenza types/subtypes are categorized as influenza A not subtyped (A subtype na), influenza A/H1 (A H1), influenza A/H3 (A H3), influenza A and B co-infection (A B), and influenza B (B).

Map: Each US region or country with available data contains a pie chart that displays the distribution of influenza types and subtypes for that area for the past two weeks combined. Two weeks of data are combined instead of using just the current week's data due to delays in reporting of laboratory results.

Figure and Table: Each week, using the total number of influenza laboratory tests performed and the positive test results, the proportions positive for each serotype of influenza are calculated for service members and dependents separately.

Data Sources and Case Definitions:

Medical encounter and demographic data from the Armed Forces Health Surveillance Branch's (AFHSB) Defense Medical Surveillance System (DMSS) are used to generate this report. In addition, health-level 7 (HL-7) format laboratory data is provided by the Navy and Marine Corps Public Health Center (NMCPHC) EpiData Center Division. For the past seasons and baseline calculations, ICD-9 codes from outpatient encounters are used to identify influenza activity. The outcome of influenza activity based on ICD-9 codes is defined using the combined codes for ILI (79.99, 382.9, 460, 461.9, 465.8, 465.9, 466.0, 486, 487.0, 487.1, 487.8, 488, 490, 780.6, or 786.2). For the current season, ICD-10 codes from outpatient encounters are used to identify influenza activity. The outcome of influenza activity based on ICD-10 codes is defined using the combined codes for ILI (B97.89, H66.9, H66.90, H66.91, H66.92, H66.93, J00, J01.9, J01.90, J06.9, J09, J09.X, J09.X1, J09.X2, J09.X3, J09.X9, J10, J10.0, J10.00, J10.01, J10.08, J10.1, J10.2, J10.8, J10.81, J10.82, J10.83, J10.89, J11, J11.0, J11.00, J11.08, J11.1, J11.2, J11.8, J11.81, J11.82, J11.83, J11.89, J12.89, J12.9, J18, J18.1, J18.8, J18.9, J20.9, J40, R05, R50.9). An individual can only be counted as a case once per week.

NORTHCOM Regions:

The regions on the NORTHCOM map (bold, black outlines) are defined using the four US Census regions, with the exception of Hawaii and Guam which are a part of PACOM. *Northeast:* Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, Vermont, New Jersey, New York, Pennsylvania, Puerto Rico, and the U.S. Virgin Islands. *South:* Delaware, the District of Columbia, Maryland, Virginia, West Virginia, Alabama, Florida, Georgia, Kentucky, Mississippi, North Carolina, South Carolina, Tennessee, Arkansas, Louisiana, Texas, and Oklahoma. *Midwest:* Illinois, Indiana, Michigan, Minnesota, Ohio, Wisconsin, Iowa, Kansas, Missouri, Nebraska, North Dakota, and South Dakota. *West:* New Mexico, Colorado, Montana, Utah, Wyoming, Arizona, California, Nevada, Alaska, Idaho, Oregon, and Washington.

(All data are preliminary and subject to change as updated data is received)
