Military Health System (MHS)
Section 703 Workgroup
Use Case Decision Package

Clark Health Clinic Joel
Health Clinic
Robinson Health Clinic Volume 1

Disclaimer: This Use Case provides information relevant to decisions to change capacity and capability of a military treatment facility. A detailed implementation plan is needed to accomplish a transition of clinical services.
Executive Summary

Site

Womack Bragg Clinics (Clark Health Clinic, Joel Health Clinic, Robinson Health Clinic)

Clark Clinic should remain an outpatient facility predominately for Active Duty family members (ADFM) and serve as a referral source for workload to Womack Hospital. The 703 Workgroup recognizes the Clark Clinic may take on additional space available beneficiaries in order to maintain appropriate empanelment and currency for providers in accordance with established policy and metrics. Transition Joel Health Clinic outpatient facility and Robinson Health Clinic outpatient facility to an Active Duty only with Occupational Health clinic (AD/OH). All base support functions and pharmacy workload supporting all beneficiaries will be maintained.

Background and Context

The table below summarizes the findings and data informing the decision on the future of the Military Medical Treatment Facility (MTF). Information in the Use Case Package could include but is not limited to: Base and MTF mission briefs, a site-visit trip report, and two network assessments (TRICARE Health Plan Network Review and an independent government network assessment). When determining the decision for each site, the mission impact and network impact were considered in conjunction with Service and MTF input.

Base Mission Summary

Fort Bragg, which encompasses Cumberland, Hoke, Harnett, and Moore counties in North Carolina, is located approximately 12 miles from Fayetteville. It equips, trains, rapidly deploys, and sustains full spectrum forces supporting combatant commanders from a community of excellence where Soldiers, families, and civilians thrive. Fort Bragg supports a community of approximately 261,000 service members and their Families, and retirees and their Families, and Department of Army civilians and contractors. Today, Fort Bragg, "the Home of the Airborne and Special Operations," with approximately 57,000 military personnel, 11,000 civilian employees, and 23,000 family members is one (1) of the largest military complexes in the world, 10% of the Army’s active component forces. Fort Bragg has 38 Controlled facilities, seven (7) Occupied Installation Management Command facilities, and four (4) leased facilities off post support the enrolled population across 44 specialty services.

Criteria Matrix

<table>
<thead>
<tr>
<th>Criteria</th>
<th>Rating or Value</th>
<th>Key Takeaways or Findings</th>
<th>Use Case Package</th>
</tr>
</thead>
</table>
| Mission Impact            | M               | • The Army military system needs to be able to expand and contract depending on the wartime need, which could be impacted based on decisions  
• Womack Army Medical Center (WAMC) and Fort Bragg clinics must maintain appropriate patient population mix to support the existing Graduate Medical Education. This is true especially for the retiree population where the clinical complexity of the patients helps support readiness of medical staff  
• As an integrated and federated system of Readiness and Health, Womack enables the Operational Force to achieve overmatch by ensuring that every Soldier is physically and cognitively Ready to Fight Tonight and proficient in their respective critical medical wartime skills. A change in the systems capabilities could add strain to the other system's parts in their ability to deliver care | Section 1.0      |
| Network Assessment        | H               | • Clark, Robinson, and Joel Health Clinics are no more than a 15-minute drive apart and any change to their capabilities will impact each other as well as the surrounding commercial Primary Care network  
• Both the TRICARE Health Plan (THP) and independent government assessments found that the Primary Care market would be challenged to absorb the impacted beneficiary population if all three clinics were to transition to Service Member Only care. The TRICARE network would have to expand to accommodate the additional demand | Section 2.0      |

1 See Appendix B for Criteria Ratings Definitions
Because of the size of Fort Bragg, family members in some zip codes are already testing the network where the care is especially good. Other locations will have to be more closely studied to understand the specific network capabilities. 94% of non-AD MTF Prime and Plus beneficiaries are living within the 30-minute drive-time boundary for Primary Care, and 95% of MTF Prime, Reliant, and Medicare Eligible beneficiaries are living within the 60-minute drive-time boundary for Specialty Care, concentrated around the MTF location.

The MHS impacted population for Primary Care is more than 28,000 which represents less than 10% of the general Primary Care population in the market, and thus will not materially impact the supply of, and demand for, care. However, Pediatric services will be a particularly important consideration as 43% of beneficiaries are below the age of 18 and the population growth is projected at 3.8% over the next five years (2019 to 2023).

Overall, there is a shortage of Primary Care physicians. However, surplus observed in Cumberland County, where the MTF is located, covers approximately 64% of impacted beneficiaries.

There is currently no effective way to share data between the military system and the network. There is a safety and quality issue to not having access to this information during transition of patients to the network.

### Risk / Concerns and Mitigating Strategies

The Risk / Concerns and Mitigation table below, represents a high-level summary of the risks identified throughout the process as well as the main concerns of the Base and MTF Commanders identified on the site visit. Though not exhaustive, the mitigation strategies/potential courses of action will be used to help develop a final implementation plan.

<table>
<thead>
<tr>
<th>Risk/Concerns</th>
<th>Mitigating Strategy</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Changing the focus of three (3) clinics will require substantial planning prior to implementation</td>
<td>An implementation plan will need to be developed to address any major issues related to the three clinics (including Robinson)</td>
</tr>
<tr>
<td>2. The impact of transitioning Active Duty Family Members and their medical records back and forth between a civilian provider and the MTF (e.g. network Primary Care providers not using Armed Forces Health Longitudinal Technology Application (AHLTA) to MTFs that use AHLTA)</td>
<td>Adequate Administrative support staff will need to be maintained/returned to cover the administrative load or the workload to be realigned to other MTFs</td>
</tr>
<tr>
<td>3. The Managed Care Support Contractor network and Clark Health Clinic may not be able to accommodate beneficiaries shifting from Robinson and Joel Health Clinics</td>
<td>The MTF should conduct the transition in a measured way incorporating a phased recapitalization plan tailoring to the beneficiary specific needs and minimizing the risk of disrupted services or capabilities. The MTF and Defense Health Agency (DHA) will monitor progress and address access issues by slowing down the transition</td>
</tr>
<tr>
<td>4. The network may experience challenges sustaining adequacy until there are new Primary Care market entrants</td>
<td>The MCoE/TRICARE Health Plan and MTF will monitor the Primary Care network adequacy and address supply issues by slowing down the transition as necessary. Additionally, the conversion of Clark Health Clinic’s capabilities to Active Duty Family Member Primary Care only clinic will mitigate issues in the supply of care</td>
</tr>
</tbody>
</table>

**Next Step**

Develop the implementation plan for the above decision, with a focus on deliberately shifting enrollees to an expanded civilian network one (1) panel at a time while developing a plan to transfer additional staff to Womack Bragg Army Medical Center. DHA and Service leadership will develop a plan to ensure GME programs are more organized so that programs such as the sports medicine fellowship is relocated to MTFs where most of the relevant soldier population are located.

2.0. Healthcare Market Surrounding the MTF

Description

The 15-mile radius (30-minute drive-time) around Fort Bragg encompasses 34 zip codes and eight (8) partial counties (Bladen, Cumberland, Harnett, Hoke, Lee, Moore, Robeson, Sampson) and in it there are 113 Primary Care practice sites, with 168 physicians overall (not limited to TRICARE). While ability and willingness to accept TRICARE patients must be confirmed, the vast majority of providers in the Womack-Bragg market are accepting government-sponsored insurance, and many are already contracted to provide services to TRICARE beneficiaries.

Top Hospital Alignment

- Cape Fear Valley Medical Center (Fayetteville, North Carolina)
- Womack Army Medical Center (Fort Bragg, North Carolina)
- Central Carolina Hospital (Sanford, North Carolina)
- FirstHealth of the Carolinas Moore Region (Pinehurst, North Carolina)
- Highsmith-Rainey Specialty Hospital (Fayetteville, North Carolina)
- New Hanover Regional Medical Center (Wilmington, North Carolina)
- Southeastern Regional Medical Center (Lumberton, North Carolina)

2.1. TRICARE Health Plan Network Assessment Summary

Facts:

- Fort Bragg, North Carolina (Fayetteville) has a market area population of approximately 1.4 M\(^\text{12}\)
- Robinson, Joel, and Clark Clinics offer Primary Care and optometry services:
  - Robinson Clinic has 13,749\(^\text{13}\) non-AD enrollees who could enroll to the network
  - Joel Clinic has 8,529 non-AD enrollees who could enroll to the network
  - Clark Clinic has 6,995 non-AD enrollees who could enroll to the network
- Total non-AD enrollees are 29,273
- Managed Care Support Contractor (MCSC) has contracted 150\(^\text{14}\) of 168\(^\text{15}\) (89%) Primary Care providers (PCP) within a 15-mile radius of the MTF. Only 137 of the 150 are accepting new patients
- Rolling 12-month JOES-C scores ending October 2018 with a “health care rating” scored as a nine (9) or 10 on a scale of 0-10:
  - Robinson patients: 54.0% (28 respondents)
  - Joel patients: 86.5% (25 respondents)
  - Clark patients: 31.6% (18 respondents)
  - Network patients: 71.4% (733 respondents)
- TRICARE Prime Out-of-Pocket Costs for Retirees and their family members\(^\text{16}\)
  - Preventive Care Visit: $0
  - Primary Care Outpatient Visit: $20
  - Specialty Care Outpatient or Urgent Care Center Visit: $30
  - Emergency Room Visit: $61

11 Contracted with TRICARE: Providers are currently contracted to provide services to TRICARE beneficiaries; High Likelihood: Providers are connected to organizations currently providing services to TRICARE beneficiaries; Medium Likelihood: Providers are accepting Medicare and/or Medicaid; Low Likelihood: Providers are neither providing Medicare nor Medicaid.
12 Network Insight Assessment Summary (Independent Government Assessment)
13 M2
14 MCSC
15 Network Insight Assessment Summary (Independent Government Assessment)
16 http://www.TRICARE.mil/costs
• TRICARE Prime enrollees should expect to drive no more than:
  o 30 minutes to a PCM for Primary Care
  o 60 minutes for Specialty Care

Assumptions:
• MCSC could contract an additional 50% of the existing non-network PCPs
• The average PCP panel is approximately 200027
• PCPs generally have relatively full panels, able to immediately enroll:
  o Up to 2.5% more enrollees (49) easily
  o 2.5% - 5% (50-99) with moderate difficulty
  o > 5% (100+) with great difficulty
• Rural networks will grow more slowly than metropolitan networks to accommodate demand

Analysis:
• Fort Bragg is in a small metropolitan area (Fayetteville) with a currently adequate Primary Care network
• Enrollment of additional beneficiaries to the network would depend on MCSC network expansion and potentially the entry of additional physicians into the market
• If MCSC contracts 50% of the non-network PCPs, they would have a total of 146 PCPs accepting new patients
• Each PCP would have to enroll 201 new patients to accommodate the 29,273 Womack satellite clinic enrollees
• Based on the assumptions above, the MCSC network could not likely expand rapidly to meet the new demand
• Beneficiaries rate network health care about the same as the Womack clinic healthcare, so beneficiary satisfaction is not likely to suffer with network enrollment
• Network enrolled Retirees and their family members will have higher out-of-pocket costs than MTF enrollees
• On base non-AD residents will have to travel farther for Primary Care if enrolled to the network

Implementation Risks:
• MCSC network may not grow fast enough to accommodate beneficiaries shifted from Womack
• MCSC may be unable to contract enough PCPs within the 30-minute drive time
• Retirees and their family members may seek less Primary Care due to out-of-pocket costs (+/-)

2.2. Network Insight Assessment Summary (Independent Government Assessment)

Facts:
• Primary Care: The MHS impacted population for Primary Care living within a 30-minute drive-time radius is approximately 28,000 (approximately 6,700 of which are from Clark Clinic) and represents about 5% of the population. This is well below the 10% threshold, and thus will not materially impact the supply of, and demand for, care. Of note, Pediatric services will be a particularly important consideration as 43% of Clark Health Clinic beneficiaries are below the age of 18 and 15.3% of the combined 17 MGMA
Clinics' beneficiaries are below the age of 5. Population growth over the last five (5) years (2014 to 2018) has averaged ~7.2%, and the projected growth for this area is 3.8% over the next five (5) years (2019 to 2023).

**Assumptions:**

- Assumptions can be found in Section 4.3.2 of the NDAA Section 703 Report

**Analysis:**

- **Primary Care:** The commercial Primary Care network within the 30-minute drive-time standard may not be capable of accepting the specific demand from the more than 28,000 impacted beneficiaries (more than 6,700 of which are from Clark Clinic). Overall, there is a shortage of Primary Care physicians. However, surplus observed in Cumberland County, where the MTF is located, covers ~64% of impacted beneficiaries. The network may be challenged to sustain the ability to service incremental demand, particularly due to the shift to value based care and resulting increased Primary Care provider usage.

Appendix A: Use Case Assumptions

General Use Case Assumptions

1. Population impact that is greater than 10% of total population will impact the supply and demand of the provider network market
2. There will be no change in the TRICARE benefit to accommodate decisions
3. Readiness requirements for the final decision will be addressed in the Service Quadruple Aim Performance Plan (QPP)
4. There will be no changes to the existing Managed Care Support Contract (MCSC)
5. The MCSC could contract an additional 50% of the existing non-network Primary Care Providers (PCPs)
6. The average PCP panel is approximately 2000\textsuperscript{18}

\textsuperscript{18} MGMA
## Appendix B: Criteria Ratings Definition

### Criteria Ratings Definition

| Mission Impact | High: High probability of impacting the mission or readiness with the impacted population receiving network care. Medium: Moderate probability of impacting the mission or readiness with the impacted population receiving network care. Low: Low probability of impacting the mission or readiness with the impacted population receiving network care. |
|                |                                             |

<p>| Network Assessment | High: Both network assessments confirm inadequate network for primary and Specialty Care. Low probability of network growth or MCSC recruitment in the future. Medium: Mixed findings from both network assessments for primary and Specialty Care. Moderate probability of network growth in the future. Low: Both network assessments confirm adequate network for Primary Care and Specialty Care. |
|                   |                                             |</p>
<table>

<tr>
<td>Therapy</td>
<td>Ambulatory care is provided by health care professionals in outpatient settings. These settings include medical offices and clinics, ambulatory surgery centers, hospital outpatient departments, and dialysis centers (AHRQ.gov)</td>
</tr>
<tr>
<td>Remote Overseas</td>
<td>TRICARE Prime Remote Overseas is a managed care option in designated remote overseas locations: Eurasia-Africa, Latin America and Canada, Pacific (Source: TRICARE.mil)</td>
</tr>
<tr>
<td>P4I</td>
<td>A set of MHS clinical, quality, safety and readiness performance measures (Partnership for Improvememt)</td>
</tr>
<tr>
<td>Panel</td>
<td>A panel is a list of patients assigned to each care team in the practice. The care team (e.g., a physician, a medical assistant, and a health educator) is responsible for preventive care, disease management, and acute care for all the patients on its panel. This means that a patient will have the opportunity to receive care from the same clinician and his or her care team. The panel's population are the patients associated with a provider or care team, the physician assistant, and a health educator (Source: health.mil)</td>
</tr>
<tr>
<td>Plus</td>
<td>With TRICARE Plus patients receive free Primary Care at their respective military hospital or clinic. The beneficiary is not required to pay anything out-of-pocket. TRICARE Plus does not cover Specialty Care (Source: health.mil)</td>
</tr>
<tr>
<td>Prime</td>
<td>TRICARE Prime is a health insurance program offered to active duty members, retirees, activated guard and reserve members, and families. Active Duty members are required to enroll in TRICARE Prime, while all others may choose to enroll or use TRICARE Select. TRICARE Prime offers fewer out-of-pocket costs than TRICARE Select, but less freedom of choice for providers (Source: health.mil)</td>
</tr>
<tr>
<td>Reliant</td>
<td>Active Duty Service Members who are not enrolled to TRICARE Prime (e.g. students and recruits) (Source: MHS Modernization Study, Feb, 2016)</td>
</tr>
<tr>
<td>Value Based</td>
<td>Value Based Payment (VBP) is a concept by which purchasers of health care (government, employers, and consumers) and payers (public and private) hold the health care delivery system at large (physicians and other providers, hospitals, etc.) accountable for both quality and cost of care (Source: AAFP)</td>

Purpose of the Visit ................................................................. 3
Summary of Site Visit ............................................................ 3
Summary of MTF Leadership Discussion .................................. 4
Summary of Base Leadership Discussion ............................... 6
**Purpose of the Visit**

This was a fact-finding visit to assist the MHS Section 703 Workgroup in understanding unique mission aspects, as well as base and MTF’s leadership perspective of the capacity of the current civilian network market. This information will be used for making MTF specific capability and capacity decisions options and decisions to be included in a report to Congress.

**Summary of Site Visit**

**Base/ Mission Impact:**
- Soldier and medical force readiness are the central to the training missions at Fort Bragg. Base leadership desires a military medical system that will support 1) healthcare and readiness of soldiers 2) readiness of medics 3) optimized troops as athletes 4) Integration between line soldiers and medics

**MTF Impact:**
- Army medicine is focused on integrating with the Army's vision of optimization of soldier’s health and readiness to fight. This means optimizing health prior to injury through metabolic development and training as elite athletes
  - **Robinson Clinic** will become an AD only, sports medicine center of excellence. The clinic is located across the street from the gym, and will have PT, sports medicine and OT to support Army total force care
  - **Joel Clinic** is becoming an AD only aviation medicine center of excellence which will include dental services
  - **Clark Clinic** will become a Benefit Category (Bencat) clinic because of the proximity to Special Warfare Center and School (SWCS) schoolhouse, this will enable them to consolidate child and family behavioral health and family advocacy into one building

**Network Impact:**
- Because of the size of Fort Bragg, family members in some zip codes are already testing the network where the care is especially good. Other locations will have to be more closely studied to understand the specific network capabilities

Summary of MTF Leadership Discussion Agenda

Below is the summary of the topics that were discussed during the MTF Leadership Discussion:

Voice of the Customer Summary:

- **MTF Mission Overview:** The Fort Bragg Military Health System is a federated system that is centralized around Womack with multiple tenant unit organic medical assets and off post community health partners. As an integrated system of Readiness and Health, Womack enables the Operational Force to achieve overmatch by ensuring that every Soldier (Army Total Force and Joint Force) is physically and cognitively Ready to Fight Tonight and proficient in their respective critical medical wartime skills. Womack has 38 Controlled facilities, seven Occupied IMCOM facilities, and four leased facilities off post. They support an enrolled population of 116,865 across 44 specialty services.

- **Soldier Readiness:** The army is moving towards optimization of soldier's health and readiness to fight. This means optimizing soldier health prior to injury through metabolic development and training. Womack is optimizing their medical facilities and resources to further support the readiness mission. They are expanding UCCs and Medical One-Stop as well as realigning services at Fort Bragg clinics to deliver specific care in proximity to the relevant populations:
  - **Robinson Clinic** will become an AD only, sports medicine center of excellence. The clinic is located across the street from the gym, and will have PT, sports medicine and OT to support Army total force care.
  - **Joel Clinic** is becoming an AD only aviation medicine center of excellence which will include dental services.
  - **Clark Clinic** will become a Benefit Category (Bencat) clinic because of the proximity to Special Warfare Center and School (SWCS) schoolhouse, this will enable them to consolidate child and family behavioral health and family advocacy into one building.

- **GME Platform (Readiness of medical personnel):** WAMC and Fort Bragg clinics must maintain appropriate patient population mix to support the existing GME. This is true especially for the retiree population where the clinical complexity of the patients help support readiness of medical staff.
o Existing partnerships could become more seamless to provide training experiences. WAMC currently sends physicians to network facilities (i.e. Emory) to integrate locally, and to get experiences to prepare the medical force.

o Additionally, with DHA oversight of logistics, GME could be more organized so that programs like a sports medicine fellowship is relocated to MTFs where most of the relevant soldier population are located.

- **Network:**
  o Because of the size of Fort Bragg, family members in some zip codes are already testing the network where the care is especially good. Other locations will have to be more closely studied to understand the specific network capabilities.
  o WAMC is honoring family member choice by advising them of the care they can receive in the network. They support “hot handoffs” as families PCS, and they aim to target another 10,000 family member beneficiaries by the end of 2019. There are logistical challenges, as Humana requires approval for patients to get released from on-base primary care (i.e. for active management of cardiac issues through network care).
  o Working in partnership with network facilities (utilizing MOUs) the MTF can optimize workflows so that the do initial workup on base, and then transfer patients to the network in exchange for training experiences for the medical force. The biggest barrier for this is an effective way to share data between the military system and the network. There is a safety and quality issue to not having access to this information.
  o TRICARE reimbursements to commercial providers are low compared to non-government payers. WAMC has to be sure that the network will accommodate their patients.
**Summary of Base Leadership Discussion**

**Summary of Fort Bragg Leadership Discussion**

Below is the summary of the topics that were discussed during the Base Commander Discussion:

*Voice of the Customer Summary:*

- **Readiness:** Soldier and medical force readiness are the central to the training missions at Fort Bragg. Base leadership desires a military medical system that will support 1) healthcare and readiness of soldiers 2) readiness of medics 3) optimized troops as athletes 4) Integration between line soldiers and medics
  - Previous changes to running the MTFs focused too much on metrics and statistics, and that became more important than taking care of soldiers at the combat support hospitals. Ideally, medical care would be delivered at battalion aid stations so that PAs and medics can take care of daily readiness requirements. By attempting to match metrics that civilian hospitals record, the MTF is missing the element of maintaining readiness. This is not the same in the civilian network where keeping, or making people healthy is the mission
  - Base leadership expressed interest in focusing more on battlefield readiness so that medical forces get the medical care experience daily, not just during special trainings. Military medicine should focus more on combat medicine
  - Additionally, the Army military system needs to be able to expand and contract depending on the wartime need
