

# DoD Consolidated Influenza Surveillance Report

Week 43 (24 Oct 2021 — 30 Oct 2021)

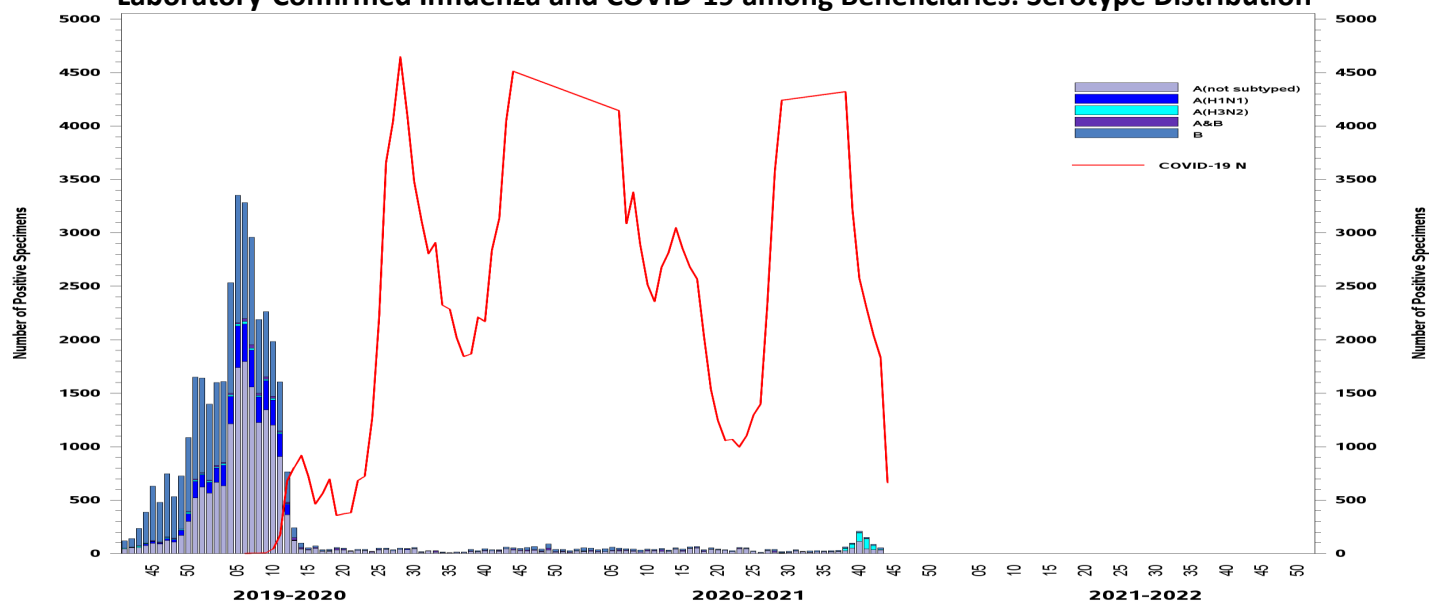

## One Page Summary: Weekly Highlights

- Laboratory-confirmed influenza cases, dispensed antiviral prescription counts, and inpatient counts among all beneficiaries were low during week 43 of the 2021-2022 influenza season.
- Among active component Service Members, laboratory-confirmed influenza cases and antiviral prescriptions were low.
- ILI activity was minimal to low for all installations and states.
- COVID-19 cases are accounting for a majority of all influenza and COVID-19 cases combined.
- There were no laboratory-confirmed influenza hospitalizations reported during week 43. (Season total: 2).

## Influenza Surveillance Indicators (2021-2022 season)

All Beneficiaries	Total Per Week		Trend	Activity Level
Laboratory Cases	54		▼	Low
Dispensed Antivirals	30		▼	Low
<b>Severity</b>				<b>Activity Level</b>
Inpatient Laboratory Cases	2		◀▶	Low
Inpatient Dispensed Antivirals	1		◀▶	Low
<b>Active Component</b>				<b>Activity Level</b>
Laboratory Cases	24		◀▶	Low
Dispensed Antivirals	11		▲	Low
ILI Outpatient Visits	1%		◀▶	Minimal

## Laboratory-Confirmed Influenza and COVID-19 among Beneficiaries: Serotype Distribution

# Confirmed Influenza and COVID-19 Cases (2021-2022 Season: Week 43)

## Number and Distribution of Influenza Positive Specimens since week 42, by Beneficiary Status and Serotype

- The number of laboratory-confirmed influenza positive specimens for the season is low. The majority of positive specimens were among beneficiaries.
- Among subtyped specimens, influenza A (H3N2) has predominated.

## Number and Distribution of Influenza Positive Specimens and COVID-19 Cases since week 42, by Beneficiary Status

- COVID-19 cases predominated among all beneficiary categories, representing a majority of influenza and COVID-19 cases. Influenza positive specimens among beneficiaries (18-64) account for approximately 15% of influenza and COVID-19 cases combined.

## Percent of Specimens Positive for Influenza (by Serotype) or COVID-19

- The percent of specimens positive for influenza remained low and stable during week 43. The percent of specimens positive for SARS-CoV-2 decreased slightly between weeks 42 and 43.

# Laboratory-Confirmed Influenza (2021-2022 Season: Week 43)

- The number of laboratory-confirmed influenza cases among all beneficiaries decreased, remaining low and below the threshold and baseline for week 43.
- Band indicates one standard deviation above and below seasonal baseline estimates. Threshold indicates two standard deviations above off-season average.

- The number of active component Service Member laboratory-confirmed influenza cases remained low and well below the threshold.
- Threshold indicates two standard deviations above seasonal baseline estimates.

# ILI and Dispensed Antiviral Prescriptions (2021-2022 Season: Week 43)

- The percentage of outpatient visits due to ILI was well below baseline and prior seasons, including 2020-2021.
- COVID-19 mitigation efforts are likely contributing to the lower than normal number of ILIs.

**Percent of Outpatient Visits Due to ILI:  
Service Members, 2017-2018 to 2021-2022 Seasons**

- Influenza-specific dispensed antiviral prescriptions among all beneficiaries remained very low and below the weekly baseline and threshold.
- Band indicates one standard deviation above and below seasonal baseline estimates. Threshold indicates two standard deviations above off-season average.

**Influenza-Specific Dispensed Antiviral Prescriptions, All Beneficiaries**

**Influenza-Specific Dispensed Antiviral Prescriptions:**

**Active Component Service Members**

- The number of influenza-specific dispensed antiviral prescriptions among active component Service Members remained low.
- Threshold indicates two standard deviation above the overall weighted average during the season. However, there is not enough data for the season to calculate the threshold for this metric.

## Severity: Hospitalized Influenza Metrics (2021-2022 Season: Week 43)

- There were no laboratory-confirmed influenza hospitalizations reported during week 43 (Season total: 2).
- There were no inpatient influenza-specific antiviral prescriptions dispensed during week 43.
- Thresholds indicate one standard deviation above the overall weighted average during the season. However, there is not enough data for the season to calculate the threshold for the influenza-specific antiviral prescriptions metric.

**Hospitalized Laboratory-Positive Influenza Cases, All Beneficiaries**

**Inpatient Dispensed Antivirals Prescriptions, All Beneficiaries**

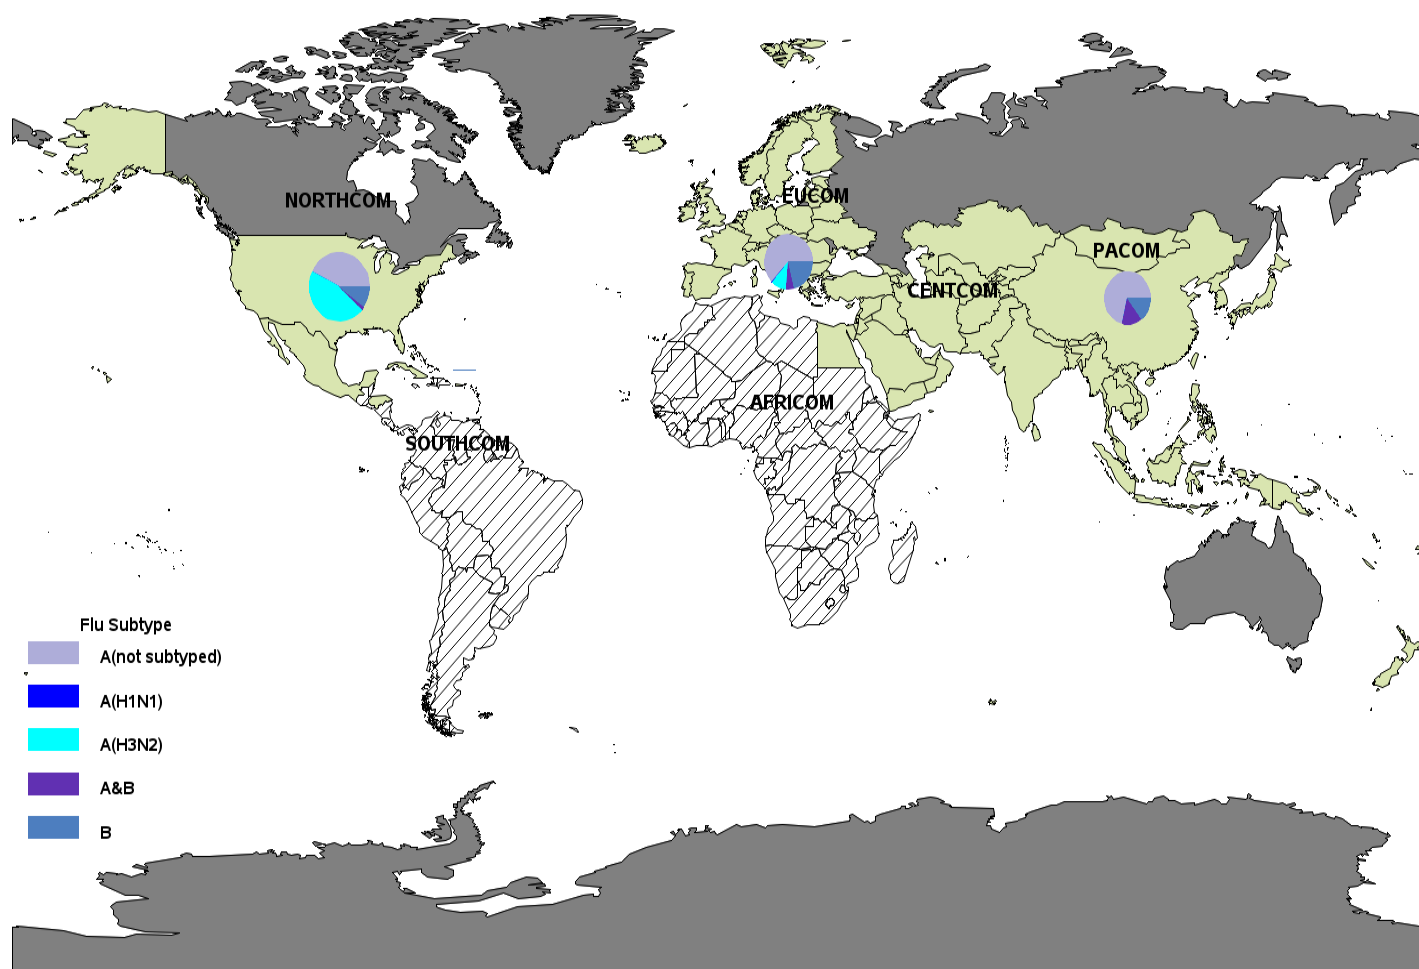

# Influenza Activity: Geographic Combatant Command

(2021-2022 Season: Week 43)

**\*\* The COVID-19 mitigation efforts occurring across the world may impact ILI activity levels.**

- **NORTHCOM:** ILI activity was minimal. The number of laboratory-confirmed influenza cases was very low; the majority being Influenza A (not subtyped) and Influenza A (H3N2).
- **EUCOM:** ILI activity was minimal. Only a small number of influenza positive specimens have been reported for the season. The majority have been Influenza A (not subtyped).
- **INDOPACOM:** ILI activity was minimal. Influenza A (not subtyped) predominated among the few laboratory-confirmed influenza positive specimens that were reported.
- **SOUTHCOM:** ILI activity was minimal. No specimens have tested positive for influenza this season.
- **CENTCOM:** ILI activity was minimal.

## ILI Activity (Service Members) and Laboratory-Confirmed Influenza (All Beneficiaries)

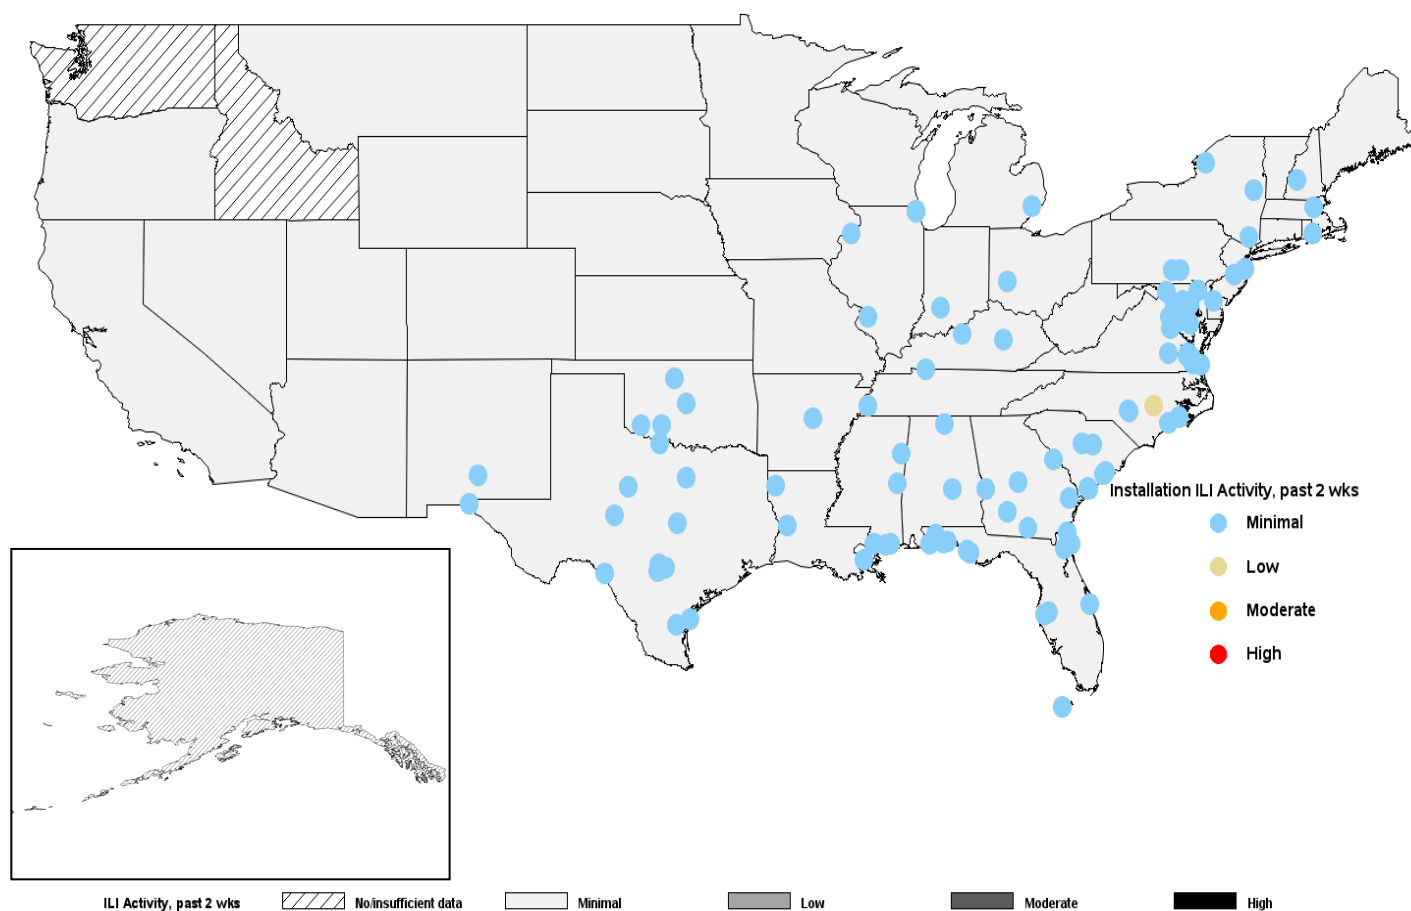

\*Locations colored in dark gray have no Service Member medical encounter data.

# Influenza Activity: NORTHCOM (2021-2022 Season: Week 43)

**\*\* The COVID-19 mitigation efforts occurring across the world may impact ILI activity levels.**

- All installations and states with available data had minimal to low ILI activity during week 43.
- Due to delays in receiving MHS GENESIS data, installations using MHS GENESIS will not have 2-week ILI activity data.
- State level data includes both Military Treatment Facility (MTF) and outsourced care. Therefore, state activity levels may differ from the installation level data.
- Installation-level laboratory-confirmed influenza and COVID-19 case data can be found on pages 14-19 of the report.

## ILI Activity (Service Members) by State and Installation

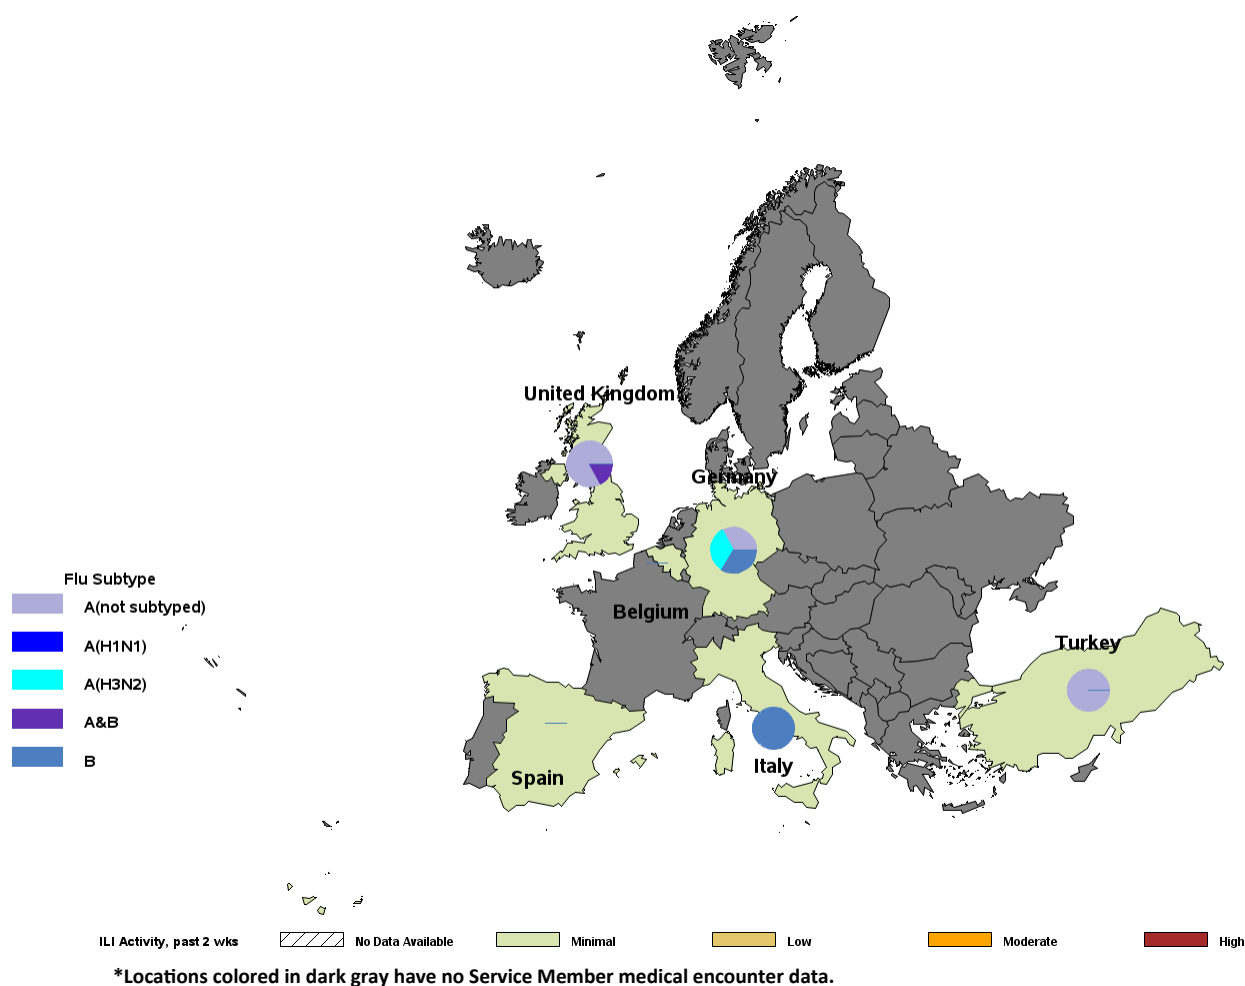

# Influenza and COVID-19 Activity: EUCOM (2021-2022 Season: Week 43)

**\*\* The COVID-19 mitigation efforts occurring across the world may impact ILI activity levels.**

- ILI activity was minimal in all countries with available data.
- Only a small number of laboratory-confirmed influenza cases have been reported for EUCOM this season. The cases occurred in Germany, the United Kingdom, Italy, and Turkey.
- Installation-level laboratory-confirmed influenza and COVID-19 case data for EUCOM can be found on page 9 of the report.

## ILI Activity (Service Members) and Laboratory-Confirmed Influenza (All Beneficiaries)

# Influenza Activity: INDOPACOM (2021-2022 Season: Week 43)

**\*\* The COVID-19 mitigation efforts occurring across the world may impact ILI activity levels.**

- ILI activity was minimal in all countries with available data.
- Installation-level laboratory-confirmed influenza and COVID-19 case data for INDOPACOM can be found on page 11 of the report.

## ILI Activity (Service Members) and Laboratory-Confirmed Influenza (All Beneficiaries)

\*Locations colored in dark gray have no Service Member medical encounter data.

# Influenza Activity: SOUTHCOM (2021-2022 Season: Week 43)

**\*\* The COVID-19 mitigation efforts occurring across the world may impact ILI activity levels.**

- ILI activity remained minimal in Cuba and Honduras.
- No laboratory-confirmed influenza cases have been reported for SOUTHCOM for the 2021-2022 season.

## ILI Activity (Service Members) and Laboratory-Confirmed Influenza (All Beneficiaries)

\*Locations colored in dark gray have no Service Member medical encounter data.

## Laboratory-Confirmed Influenza by Installation (All Beneficiaries)

# Surveillance Programs and Data Sources

## Defense Health Agency / Armed Forces Health Surveillance Division (AFHSD):

The Armed Forces Health Surveillance Division (AFHSD) is the central epidemiologic resource for the U.S. Armed Forces, conducting medical surveillance to protect those who serve our nation in uniform and allies who are critical to our national security interests. The Epidemiology and Analysis Section of AFHSD, the Epi Data Center of the Navy and Marine Corps Public Health Center, and the Air Force Satellite Office in Dayton, Ohio (Wright-Patterson AFB) have compiled data for this report from the following sources below.

## Influenza-like Illness Activity:

Medical encounter and demographic data from the AFHSD's Defense Medical Surveillance System (DMSS) are used to generate portions of this report. ICD-10 codes from outpatient encounters are used to identify influenza-like illness (ILI). ILI is defined using the following codes: B97.89, H66.9, H66.90, H66.91, H66.92, H66.93, J00, J01.9, J01.90, J06.9, J09, J09.X, J09.X1, J09.X2, J09.X3, J09.X9, J10, J10.0, J10.00, J10.01, J10.08, J10.1, J10.2, J10.8, J10.81, J10.82, J10.83, J10.89, J11, J11.0, J11.00, J11.08, J11.1, J11.2, J11.8, J11.81, J11.82, J11.83, J11.89, J12.89, J12.9, J18, J18.1, J18.8, J18.9, J20.9, J40, R05, R50.9.

The percentage of all outpatient visits that have an ILI code is calculated each week for all service members, regardless of component. These data are presented weekly for the current season and compared to the four prior seasons among service members. Influenza activity levels are calculated by comparing the mean reported percent of visits due to ILI for the previous two weeks to the mean reported percent of visits due to ILI during baseline weeks (defined as non-influenza weeks (weeks 22-39) over the past 3 years). Since the 2020-2021 influenza season was nearly non-existent due to COVID-19 mitigation efforts, this season was excluded from the baseline calculations. The baseline weeks for the 2021-2022 report are from the years 2018, 2019, and 2020. There are four influenza activity levels, minimal, low, moderate, and high. The activity level corresponds to the number of standard deviations (SD) below, at or above the mean for the current 2 week period compared to the mean of the baseline weeks. Minimal activity corresponds to an influenza percentage that is less than 2 SD above the mean. Low activity corresponds to an influenza percentage that is equal to or greater than 2 SD above the mean, but less than 4 SD above the mean. Moderate activity corresponds to an influenza percentage that is equal to or greater than 4 SD above the mean, but less than 6 SD above the mean. High activity corresponds to an influenza percentage that is equal to or greater than 6 SD above the mean.

Influenza activity levels are presented in the Combatant Command (CCMD) maps, either by Installation, state, or country.

## Influenza Positive Specimens:

Influenza lab results (HL-7 formatted data) are compiled and transmitted from the Navy and Marine Corps Public Health Center to AFHSD. Results obtained via PCR, viral culture, and rapid influenza assays are reported. Although the inclusion of rapid tests may underestimate the weekly and cumulative percent positive estimates due to false negatives, visibility of the positive rapid results provides valuable information for this surveillance report. Influenza types/subtypes are categorized as influenza A/not subtyped, influenza A(H1N1), influenza A(H3N2), influenza A and B co-infection, and influenza B. Additionally, laboratory-confirmed positive results are used to identify influenza-related hospitalization cases across the DoD.

The percent positivity is calculated by dividing the number of influenza positive specimens by the total number of specimens (positive and negative only; inconclusive results are excluded). The distributions of percent positive specimens by subtype are presented on a weekly basis for the entire influenza season. For each CCMD state, the distribution of subtypes for the previous 2 weeks are presented as pie graphs for states and countries. For installations, data are presented in tables with counts and percent positive by subtype for the past 2 weeks and for the entire season. The "change from last report" column reports the absolute difference in the percent positive from the prior week's report to the current week's report.

# Surveillance Programs and Data Sources

## COVID-19 Cases:

COVID-19 case data are compiled from the COVID-19 positive lab results (HL-7 formatted data) and cases reported in the DRSI. The percent positivity calculation is restricted to only COVID-19 cases reported through the lab data so that an accurate denominator can be obtained. The percent positivity is calculated by dividing the number of COVID-19 positive specimens by the total number of specimens tested for COVID-19. For installations, COVID-19 case data are presented in tables with case counts for the past 2 weeks and for the entire influenza season (Week 40 to current). The “change from last report” column reports the absolute difference in the number of COVID-19 case counts from the prior week’s report to the current week’s report.

## Pharmacy Transactions for Dispensed Influenza Antiviral Prescriptions:

HL7-formatted pharmacy transactions are used to assess the number of dispensed influenza antiviral (AV) prescriptions. Four influenza AV medications approved by the Food and Drug Administration (FDA) are recommended by the CDC for use in the United States (US) for the 2019-2020 influenza season: oral oseltamivir (Tamiflu® or generic), inhaled zanamivir (Relenza®), and intravenous peramivir (Rapivab®), and baloxavir marboxil (Xofluza®). These prescriptions are included in this surveillance. The overall count of dispensed AV prescriptions by week is presented graphically for the influenza season. A seasonal baseline is displayed with dispensed AV prescriptions. Surveillance thresholds are displayed with the count of inpatient dispensed AV prescriptions. Additionally, counts of inpatient dispensed influenza AV prescriptions are presented weekly for the influenza season.

## Influenza Baselines, Thresholds, and Trends:

Weekly baselines used a three-year average to compare results with those from the same week during the previous three seasons. Since the 2020-2021 influenza season was nearly non-existent due to COVID-19 mitigation efforts, this season was excluded from the baseline calculations. The baseline calculations used the 2017-2018, 2018-2019, and 2019-2020 season data. Bands for one and two standard deviations above seasonal baseline estimates are displayed to indicate when trends diverge with respect to timing or volume from those of recent seasons. The ILI, lab, and dispensed AV prescription data thresholds are calculated by adding two standard deviations to the off-season average.

Inpatient thresholds (lab and dispensed AV prescription data) are calculated by adding one standard deviation to the overall weighted average for in-season weeks. Weeks that represent at least 2% of the total season’s laboratory-positive influenza cases for at least two consecutive weeks was considered to be “in-season” or influenza weeks; all other weeks are considered to be “off-season” or non-influenza weeks.
