DHA Pharmacy Operations Division Deployment Medication Analysis and Reporting Tool (D-MART)
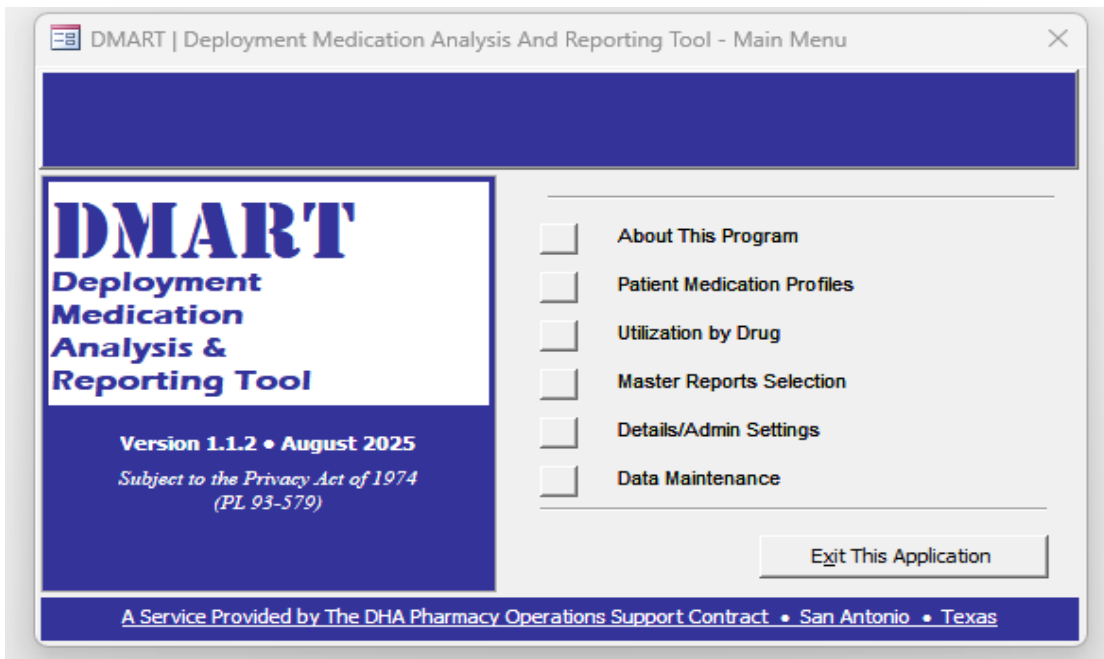

Report Tool Overview

- Medication profile snapshot for deploying Service Members (SM)
    - Pre-deployment medication screening
    - Identification of high-risk SMs
    - Assists in identification of SMs who may require waiver
- Menu-driven, Microsoft Access database with look-up features and reports.
- Data sourced from Pharmacy Data Warehouse (PDW), all DoD Pharmacy points of service.
- Report turn-around 24 – 72 hours, 3-5 business days.

Deployment MART Homepage

The DMART homepage displays a menu of available reports, described in detail over the next several slides.

About This Program

- New in January 2020, the DMART reports Deployment Limiting Health Condition Medications –those that may require a waiver, special handling, routine monitoring, or time for dose stabilization as well as injectables and controlled substances.

- As in previous MART tools, this one also reports Controlled Substances and Chronic meds. Chronic meds may also be identified as DLHC but include those for BP, glaucoma, cholesterol control, etc.

- Non-deployment meds include those drugs not available on the CENTCOM formulary that may be obtained through the mail order program (MOP) while in theater. The MOP is the highly successful refill method of choice for deploying SMs. While SRP providers are encouraged to use medications available on the CENTCOM formulary, often SMs are stabilized on particular drugs and should not be switched.

DMART | Deployment Medication Analysis And Reporting Tool - About

DMART | Deployment Medication Analysis And Reporting Tool

This program was developed to aid healthcare providers responsible for the medical care of deploying service men and women. The intent is to identify individuals who might require a more intensive medical review or to alert healthcare providers of medication needs not available in standard deployment packs.

New report as of January 2020.

Deployment Limiting Health Condition (DLHC) medications that may require the service member to receive a waiver before deployment. Medications that require routine monitoring, or a period of time for dose stabilization are included, as are injectables, controlled substances, and medications that need special handling or storage.

Controlled substances are those medications categorized by the federal government as having a higher potential for abuse or addiction. The included drugs are designated as Schedule II - V according to their medical use, potential for abuse, and safety or dependence liability.

Chronic medications, often referred to as maintenance medications, are those drugs taken on a routine bases and when not provided, have the potential for therapeutic failure.

This database contains Privacy Act information and is subject to criminal, civil and/or administrative penalties to those who willfully misuse this information and violate a person's rights under the Privacy Act. This information was provided pursuant a request from the Senior Medical Officer of this deploying unit. Reasonable and necessary security should be in place to protect this data from unauthorized users.

This program was developed by the DHA Pharmacy Operations Division, DHA POSC. Please send any comments or suggestions to us at dha.jbsa.pharmacy-ops.mbx.pass-dmt@health.mil.

Patient Medication Profiles

The Patient Medication Profiles button located on the homepage allows providers to generate a snapshot of a SM's complete drug profile (Rxs dispensed at the MTF, retail, and mail order) over the time period requested for the report. Prescription information includes drug name, drug classification, quantity, date filled and days supply as well as information regarding the drug's inclusion on various formularies. After reviewing the individual profile, if the provider determines the SM needs further follow up, the provider can check "Add to Surgeon's Recall Roster", a separate report that identifies all individuals on the recall roster. If the alpha roster is broken down by individual units, the report can also filter per unit.

Utilization by Drug

This report allows the provider to list by name SMs within the unit who are on a specific drug. It may assist the provider in identifying those SMs on a particular drug of interest or who may require a waiver.

Master Reports Selection

- The 4th button on the home page leads to the Master Reports Selection that lists all reports available in the tool. Here, users can restrict the date range, select specific units for review, or suppress reporting for drugs that are not of interest.

- The following slides display various sample reports.

Drug Combination Report

The Drug Combination Report allows the user to select up to three different drugs to identify patients with prescriptions for all during the report time frame. The drug choices are based on all prescriptions received during the report time frame by any SM in the unit.

Controlled Substance Details

The Details report (vs Summary Reports) lists medications and SMs on those drugs during the requested time period. Information on this report includes drug name, whether the drug is available on the selected formulary, last filled date, quantity, and days supply. The date in top right corner shows when the DMART data was obtained.

Unavailable at Mail Order

Some medications are not available through the mail order program; most are OTCs or temperature-sensitive. This list will help the provider/pharmacy to identify medications that may require adequate refills from the SRP pharmacy while the SM is in theater or alert the SM to change medication to something available through the mail order pharmacy.

Your DMART Statistics

Medication Use Statistics summarizes the numbers and percentages of SMs and prescriptions for various drug categories.

Medication Use Statistics

Current number of Service Members:	699	Total number of SMs in database (for reference): 699
Current Number of Prescriptions:	774	Total number of Rxs in database (for reference): 774
Current Number of Service Members with Prescriptions:	682	97.6%

The below statistics are all subject to available filtering. If you have deselected units or changed the reporting date range on the previous window (Details/Admin window), the counts below will report within these restrictions. The percentages below use Current Number of Service Members/Prescriptions as the denominator.

	Number of RXs		Number of SMs on at least one:	
DLHC Medications:	545	70.4%	471	67.4%
Chronic Medications:	458	59.2%	408	58.4%
Controlled Medications:	97	12.5%	71	10.2%
Opioid Medications:	33	4.3%	28	4.0%
N/A in Theater:	774	100.0%	682	97.6%
N/A at Mail Order:	25	3.2%	21	3.0%

How To Order D-MART Report

- Complete a DHA 249 Form: Pharmacy Data Warehouse Data Report Request Form located at: D-MART

- Email it to: dha.jbsa.pharmacy-ops.mbx.pass-dmt@health.mil

- Provide Unit Alpha Roster as directed by receiving analyst

- For Questions call 210-536-6650 and leave a voicemail and a Data Management Team (DMT) member will return your call.
