## Chapter

## Introduction

This Codebook and Users' Guide provides a tool for programmers and analysts to assist them in creating cross-tabulations and basic statistical estimates from the 2016 Adult Health Care Survey of DoD Beneficiaries (HCSDB). It is intended to assist users in creating tables and generating analyses above and beyond those associated with this project.

Beginning with 2006, reporting and documentation of the HCSDB is performed on a fiscal year basis. In previous years, reporting and documentation were based on calendar years. Thus, the current codebook describes the annual dataset for fiscal year 2016. Throughout, 2016 annual dataset refers to the fiscal year 2016.

This version of the Codebook and User's Guide describes the annual data set. The annual data set combines survey responses from three quarters of fiscal year 2016 and late arriving responses from quarters I and II.

Users interested in recreating specific tables or charts from Mathematica's analytic report should refer to "The 2016 Health Care Survey of DoD Beneficiaries: Adult Technical Manual." That document defines the procedures required to reproduce the TRICARE Beneficiary Reports and charts presented in the Annual National Report, using HCSDB data.

This chapter explains how to use this guide, reviews the survey, briefly describes the sample design, and concludes with a list of other documents on the HCSDB data that may be useful for policymakers, administrators, and other users.

## HOW TO USE THIS GUIDE

Chapter 2 describes the survey fielding process.
Chapter 3 describes the database conventions and types of variables in the database. Furthermore, it explains the relationship between the raw survey data and the cleaned and constructed variables preferred for data analyses.

Chapter 4 provides table-making instructions in both Statistical Analysis System (SAS) and Statistical Package for the Social Sciences (SPSS) and clearly demonstrates the basic computer programming code necessary to tabulate the data in SAS and the interactive steps involved in generating tables in SPSS (either statistical package may be used). While we assume that most users have some knowledge of computer systems and statistical processing, examples of how to create tables and the resulting output are provided in order to simplify the process of data tabulation. Due to the complexity of the sample design, we suggest that users interested in measuring the precision of their results use a statistical package capable of calculating standard errors for survey estimates, such as SUDAAN ${ }^{\text {TM }}$ or SAS/STAT ${ }^{\oplus}$ V8 or higher. Sample programming code is included to estimate standard errors using appropriate methods to accommodate the complex sample design.

The codebook is presented in Chapter 5, where we give the annual and quarterly counts for each variable in the database, including a list of all existing values of the variable, weighted and unweighted frequency counts and percent occurrences for each value, and the values' interpretation or formatting. The codebook helps users assess the availability of certain measures, specify variables of interest, and
identify all possible values of a variable. The variables are listed in the order of their position on the data file, and they are grouped by source as follows:

- Sampling variables used to place beneficiaries in the appropriate strata
- Information from the Defense Enrollment Eligibility Reporting System (DEERS) at the time of sampling
- Questionnaire responses: cleaned and recoded
- Variables created during the fielding of the survey
- Coding Scheme flags and missing value counts
- Constructed variables for analysis
- Poststratification variables
- Weights

In addition, users may refer to the Table of Variables and the Alphabetical Table of Variables, which follow directly after the Table of Contents, for quick-reference lists intended to assist users in locating each variable.

Users interested in learning more about the technical aspects of the database creation, construction of new variables, or Mathematica's report production procedures may refer to "The 2016 Health Care Survey of DoD Beneficiaries: Adult Technical Manual," from the Defense Health Agency Office.

## What is the HCSDB?

The HCSDB is a health care survey of Active Duty military personnel, retirees, and their adult family members. Prior to 2011, it was comprised of an adult and a child survey, both fielded to a representative sample of beneficiaries. In 2011, only the adult survey was fielded to a representative sample of beneficiaries. Prior to 2013, the adult survey was fielded every quarter, whereas the child survey was fielded only in one quarter of each fiscal year. This year's reports show frequencies of variables from surveys fielded in three quarters of FY 2016, which describes a period from October 2015 to June 2016. Beginning in FY 2013, the surveys for quarter four were canceled as a result of budget constraints. Results from each quarter of the adult survey are presented as a web-based report. The survey is sponsored by the Assistant Secretary of Defense (Health Affairs) [OASD (HA)], under authority of the National Defense Authorization Act for Fiscal Year 1993 (P.L. 102-484). The survey collects data on beneficiaries' satisfaction with, and access to, health care; knowledge of the TRICARE system; and use of preventive and other health care services.

Fielded annually from 1994 to 2000, the HCSDB now is fielded quarterly (with the change to 3 quarters in 2013, 2014, 2015, and 2016 as noted above) and consists of a fixed core questionnaire complemented by quarterly supplements intended to address topics of emerging interest. Users should note that, prior to 2000, the title of the HCSDB corresponded to the reference year that respondents were asked to think about when responding to questions. For example, although the 2000 HCSDB was fielded in 2001, beneficiaries responded to questions according to the reference period 12 months prior. Under the current naming convention the survey title refers to the year the questionnaires are fielded, so, for example, this year's survey is the 2016 HSCDB. Users should further note that, due to this change, there is no survey with the title "2001" survey, even though the questionnaire has been administered continuously throughout each quarter of 2001, 2002, 2003, 2004, 2005, 2006, 2007, 2008, 2009, 2010, 2011, 2012, 2013, 2014, and 2015. The annotated questionnaire for this quarter appears in Appendix A. A crosswalk between the 2016 questions and the questions from the 2008, 2009, 2010, 2011, 2012, 2013, 2014, and 2015 surveys appears as Appendix C.

## CAHPS Questions

To make responses comparable to civilian surveys, the HCSDB core questions are similar in content and format to questions used in the Consumer Assessment of Healthcare Providers and Systems (CAHPS) Health Plan Survey. CAHPS is a survey program sponsored by the Agency for Health Care Research and Quality (AHRQ), U.S. Department of Health and Human Services, and the Picker Institute, which is designed to monitor beneficiaries' satisfaction with their civilian health care plan and access to health care services. In 2016, the questionnaire was based on CAHPS version 5 .

Core questions are described below.

## Core questions

- Health Plan. This section collects data on TRICARE Prime enrollment and the use of supplemental insurance and/or other private insurance. Respondents are also asked about their Medicare coverage.
- Your Health Care in the Last 12 Months. This section collects information on where DoD beneficiaries received the majority of their care in the past 12 months, that is, from a military or civilian facility. It covers topics such as the availability of providers and their staff for both urgent and regular care. Respondents are asked to rate their health care on a scale from 0 to 10 , where 0 is the lowest rating and 10 is the highest rating. They are also asked if the health care providers informed them of the available treatment options.
- Your Personal Doctor. In this section, respondents are asked about their relationship with their personal doctor. They are asked to rate their personal doctor on a scale from 0 to 10 , where 0 is the lowest rating and 10 is the highest rating. It also covers topics like the ability of the personal doctor to listen carefully and respectfully, clearly explain things, and be informed about care received from another doctor.
- Getting Health Care from a Specialist. This section collects information about respondents' access to care from specialists. Respondents rate the specialist that they see most frequently on a scale from 0 to 10 , where 0 is the lowest rating and 10 is the highest rating.
- Your Health Plan. This section is designed to measure beneficiaries' satisfaction with their primary health plan. Respondents are asked to rate their health plan on a scale of 0 to 10 where 0 is the lowest rating and 10 is the highest rating. Additionally, respondents are asked questions about any problems they may have encountered with getting necessary care, claims processing, customer service, processing paperwork, and finding necessary information in written materials or from the Internet.
- Preventive Care. This section collects information on the use of preventive health care services, including blood pressure readings and flu shots. All women are asked about Pap smears; women that are or have been pregnant within the past 12 months are questioned about prenatal care. Women age 40 and over are asked about mammography. All respondents are asked whether they smoke or use tobacco products. Tobacco users are asked to identify the type of tobacco products they used and how often they received cessation counseling from a health care professional.
- About You. This section asks basic background and health status questions. Beneficiaries are asked how they view their general health. They are further asked to report their height, weight, education level, race, and age.

## Quarter I Supplements

- Mental or Emotional Health. Questions in this supplement concern overall mental or emotional health. Respondents are asked to rate their mental or emotional health. They are also asked questions about any mental or emotional health treatment or counseling they may have received.
- Personal Doctor. Questions in this supplement ask about the respondent's personal doctor. Respondents are asked whether they had the same personal doctor prior to joining their current health plan and whether they were happy with their personal doctor once they joined the health plan, the availability of their doctor, and their satisfaction with their health care on their last visit.
- Health Care Appointments. Questions in this supplement ask about various aspects of making appointments at both military treatment facilities (MTFs) and with civilian health care providers. Respondents are asked about their reasons for making, and not making, appointments, as well as the availability of the appointments that were needed.
- Electronic Cigarettes. Questions in this supplement ask about use of electronic cigarettes, or ecigarettes. Respondents are asked about frequency of e-cigarette use, whether they use flavored e-cigarettes, and whether they have switched entirely from using regular cigarettes to using ecigarettes.

## Quarter II Supplements

- Mental or Emotional Health. Questions in this supplement concern overall mental or emotional health. Respondents are asked to rate their mental or emotional health. They are also asked questions about any mental or emotional health treatment or counseling they may have received.
- Personal Doctor. Questions in this supplement ask about the respondent's personal doctor. Respondents are asked whether they had the same personal doctor prior to joining their current health plan and whether they were happy with their personal doctor once they joined the health plan, the availability of their doctor, and their satisfaction with their health care on their last visit.
- Electronic Cigarettes. Questions in this supplement ask about use of electronic cigarettes, or ecigarettes. Respondents are asked about frequency of e-cigarette use, whether they use flavored e-cigarettes, and whether they have switched entirely from using regular cigarettes to using ecigarettes.
- Civilian Health Insurance Coverage. Questions in this supplement concern those that are eligible for TRICARE and also have the opportunity to obtain other health insurance. Respondents are asked questions on their civilian coverage as well as their use of TRICARE.
- Poor Physical and Mental Health. Questions in this supplement ask how many days the respondent was in poor physical and mental health, and how many days that poor health limited the respondent's regular activities.

## Quarter III Supplements

- Personal Doctor. Questions in this supplement ask about the respondent's personal doctor. Respondents are asked whether they had the same personal doctor prior to joining their current health plan and whether they were happy with their personal doctor once they joined the health plan, the availability of their doctor, and their satisfaction with their health care on their last visit.
- Mental or Emotional Health. Questions in this supplement concern overall mental or emotional health. Respondents are asked to rate their mental or emotional health. They are also asked questions about any mental or emotional health treatment or counseling they may have received.
- Women's Health. Questions in this supplement ask about different aspects of women's health care, including which method(s) of birth control women use and whether they have had a pelvic exam in the past year. There are also questions for women who became mothers in the past year. These questions ask about experiences with breastfeeding and breast pump use, including several questions about insurance coverage for breast pumps.
- Medical Conditions. Questions in this supplement ask whether the respondent has ever been told they have one or more serious medical conditions, including heart attack, stroke, cancer, and depression.
- Poor Physical and Mental Health. Questions in this supplement ask how many days the respondent was in poor physical and mental health, and how many days that poor health limited the respondent's regular activities.

## Sample Design Overview

The sample of beneficiaries for the HCSDB was drawn from an extract file of the DEERS database of military health system (MHS) beneficiaries with a specific reference date. The DEERS extract file includes all eligible MHS beneficiaries as follows:

- Everyone in the Uniformed Services and on Active Duty (Army, Air Force, Navy, Marine Corps, Coast Guard, the Commissioned Corps of the Public Health Service, National Oceanic and Atmospheric Administration, Guard/Reserve personnel who are activated for a period in excess of 30 days), and other special categories of people who qualify for benefits
- Those who retired from military careers
- Immediate family members of people in the previous two categories
- Surviving family members of people from the first two categories.

A stratified sample design was used to select DoD health care beneficiaries for the 2016 Adult HCSDB. Specific information on the sample design appears in "Health Care Survey of DoD Beneficiaries: 2016 Adult Sampling Report", Mathematica Policy Research, Washington, D.C.

We examined response rates to identify patterns across different domains or characteristics. While analysts prefer weighted rates that reflect the estimated proportion of respondents among all beneficiaries, operational staff is often interested in getting unweighted measures. All tables include unweighted and weighted values. In the following, we focus on discussing unweighted response rates for domains of interest.

Table 1.1 below provides data regarding response rates for the 2016 Adult HCSDB for the third quarter, quarters I-II with the additional "trickle" responses, and the combined dataset by beneficiary groups, and by enrollment status.

- Overall: The overall unweighted response rate for the combined of 2016 Adult HCSDB was about 9.6 percent, up from 9.1 percent for the second quarter of 2016.

Beneficiary group and enrollment status: Response rates across beneficiary groups and enrollment status are shown below. We achieved our highest response rate from retirees over 64 years and our lowest response rate from Active Duty family members.

Appendix G (Response Rate Tables) contains tables showing unweighted and weighted response rates for all three quarters and the combined annual dataset. We summarize results about unweighted response rates for selected domains as follows:

- Regions: Combined response rates across regions range from 8.1 percent for Overseas to 10.1 percent for North (Table G.9).
- Sex: Combined response rate for women is 8.1 percent as compared to 11.6 percent for men. (Table G.3).
- CONUS: Combined response rate for Western Pacific is 7.0 percent as compared to 8.8 percent for Latin America. (Table G.2).
- Catchment areas: Combined response rates across catchment areas that were represented in all quarters range from 4.6 percent for Guthrie AHC-Ft. Drum to 22.1 percent for Walter Reed AMCWashington DC. (Table G.6).
- Beneficiary groups by sex: Women respond at a higher rate than men for both Active Duty and Active Duty family members, 12.3 percent versus 9.4 percent and 4.8 percent versus 2.7 percent, respectively. The opposite pattern emerges for retirees, survivors and family members 65 and older, 32.5 percent for women versus 41.6 percent for men. The response rates for retirees less than 65 are 16.0 for men vs 13.3 for women. (Table G.11).
- Beneficiary group by service affiliation (Army, Navy, Air Force, Marine Corps, Coast Guard, Other/Unknown): Among service affiliations, the smallest combined response rate comes from dependents of Active Duty in the Marine Corps with 3.6 percent and the largest from Retirees, Dependents of Retirees, and Survivors age 65 and over with other/unknown service affiliation with 50.0 percent. (Table G.12).

## Chapter

2

## Survey of Adults

This chapter presents information on the survey administration cycle for the annual 2016 Adult Health Care Survey of DoD Beneficiaries (HCSDB), with specific details on the survey mailing cycle and the number of surveys returned.

## A. SURVEY OPERATIONS ACTIVITIES

The Health Care Survey of DoD Beneficiaries (HCSDB) converted from a mail survey with Internet option in previous years to an all-internet survey in FY2014. Starting in Quarter III of FY2015, a subsample of beneficiaries - excluding Active Duty, Guard/Reserve, and some Inactive Guard/Reserve with e-mail addresses - received a paper questionnaire along with the reminder letter in addition to the mail version of the pre-notification letter. Operational support for the HCSDB in 2016 involved two mailings to all beneficiaries and six emailings to Active Duty members in both Quarters I and II, and in Quarter III involved 2 mailings to all beneficiaries on March 15, 2016, and May 2, 2016, and nine emailings to Active Duty members between March 22, 2016 and June 8, 2016.

The mailings include:

1. Invitation letter with instructions on how to access the Internet survey.
2. Reminder letter with instructions on how to access the Internet survey.
3. A paper questionnaire.

All beneficiaries received a mail version of the pre-notification letter. Approximately halfway through the Quarter III, 2016 field period, a sample of 63,564 non-respondents was drawn from those without an e-mail address, those individuals were mailed a paper questionnaire with their reminder letter. In other words, the paper surveys were intended for beneficiaries other than Active Duty sponsors, Guard/Reserve sponsors, and some Inactive Guard/Reserve sponsors. Those service members with e-mail addresses were reminded through e-mail nine times. The field period was 13 weeks.

The invitation letter includes instructions on how to do the survey via the Internet. The reminder letter encourages the beneficiary to complete the survey and provides the respondent with their Internet password. Furthermore, Mathematica emailed the Active Duty members six times in each of the first two quarters of 2016 and nine times over the course the third quarterly survey period of 2016. Each email included the service members' password for the survey.

## B. SAMPLE

A change in the sample file to increase response rate was initiated in Quarter I, 2014. Up to Quarter I, 2009, the Adult HCSDB was conducted quarterly on a sample of 50,000 beneficiaries, and starting in Quarter II, 2009, the sample size was increased to 51,000 . In Quarter I, 2014 the sample size was again increased, this time to approximately 100,000 records.

The Quarter I, 2016 sample contained 99,850 records. In Quarter I, the HCSDB invitation letter was mailed/emailed out to 99,437 respondents. The remaining 413 records did not include either the respondents' names or addresses (or in the case of Active Duty, the email or mailing address) and so
were not able to be mailed/emailed. The Quarter II, 2016 sample contained 99,509 records. In Quarter II, the HCSDB invitation letter was mailed/emailed out to 99,123 respondents. The remaining 386 records did not include either the respondents' names or addresses (or in the case of Active Duty, the email or mailing address) and so were not able to be mailed/emailed. The Quarter III, 2016 sample contained 99,560 records. In Quarter III, the HCSDB invitation letter was mailed/emailed out to 99,324 respondents. The remaining 236 records did not include either the respondents' names or addresses (or in the case of Active Duty, the email or mailing address) and so were not able to be mailed/emailed.

## C. SURVEY PROCESSING

Ipsos applies a Bar Code, Control Number (MIQ) and Password to each beneficiary upon receipt of the sample. This system ensures that all data collected is aggregated and available throughout the survey lifecycle. Each of the identifying labels is detailed below:

## Barcode

Digit 1 - Quarter Marker (1-4)
Digit 2 - Wave Marker (1-4)
Digit 3 - Study Marker (1=sample, 2=supplemental, 3=child)
Digits 4-8-Sequential ID\#
Control Number (MIQ) - 10-digit unique identifier
Digits 1-9 - Sequential ID \#
Digit 10 - Check Digit

## Password

Non-sequential 7-digit password (for online response access). To ensure that the password is unique across all samples and across all DoD studies, the first digit is assigned to a specific quarter and study.

## D. ADDRESSES

The HCSDB is designed so that beneficiaries may receive up to three mailings. Ipsos may collect up to seven address changes for each beneficiary in order to maximize the receipt rate for mailing. Addresses from Center for Health Care Strategies, Inc (CHCS) were used starting in Quarter I, 2008.

The first available address in the following order was used for each mailing.
Respondent Updated
United States Postal Service (USPS) Updated
National Change of Address (NCOA)
CHCS
Residential
Sponsor
Unit

The origin of the addresses is as follows:

## - NCOA Address

Upon receipt of the initial sample and prior to the pre-notification mailing, Ipsos selects the best available address for each beneficiary and sends it to an NCOA vendor for updating and hygiene services. The updated address returned by the vendor is marked as the NCOA address. The current definition of "best address" requires Ipsos to compare the date on the Residential address to the date on the CHCS address. The address that has the more current date was sent off for

NCOA processing. If the dates are the same or if one/both are missing dates, then the hierarchy of CHCS then Residential prevails.

- Respondent Updates

Respondents were able to report address and status changes via regular mail, telephone, fax, and email. Address changes submitted by respondent were considered priority over any other address type.

- Address Correction via USPS

The USPS provided address corrections on returned mail if available.

- Sample Refreshes

Starting in Quarter I, 2009, Ipsos only used the deceased and nomatch information from the sample refreshes sent by Altarum, and did not use any refreshed addresses in order to maintain the integrity of the NCOA address. Starting in Quarter IV, 2011, the only Active Duty respondents who were mailed surveys were those who did not have a valid/known email address.

Tables 2.1.1-2.1.3 gives the address breakdown for each mailing by beneficiary category.

Table 2.1.1

## F. DISPOSITION CODES

Ipsos assigns disposition codes to each sample member as the information is received and questionnaire is returned. These codes are outlined below.

- FLAG_FIN=1

Returned survey - survey was completed and returned.

- FLAG_FIN=2

Returned ineligible - survey was returned with at least one question marked and information that the beneficiary was ineligible. The information indicating ineligibility may have come by mail, phone, fax, or the survey itself.

- FLAG_FIN=3

Returned blank - temporarily ill or incapacitated. Survey was returned blank along with information that the beneficiary was temporarily ill or incapacitated. These sample members were eligible.

- FLAG_FIN=4

Returned blank - deceased. Survey was returned blank along with information that the beneficiary was deceased. These sample members were ineligible.

- FLAG_FIN=5

Returned blank - incarcerated or permanently incapacitated. Survey was returned blank along with information that the beneficiary was incarcerated or permanently hospitalized. These sample members were ineligible.

- FLAG_FIN=6

Returned blank - left military or divorced after date of initial sample pull, retired. Survey was returned blank along with information that the beneficiary left the military after initial sample pull, divorced after initial sample pull, or retired. These sample members were eligible.

- FLAG_FIN=7

Returned blank - not eligible on date of initial sample pull. Survey was returned blank along with information that the beneficiary was not eligible for Military Health System Plan on initial sample pull. These sample members were ineligible.

- FLAG_FIN=8

Returned blank - other eligible. Survey was returned blank along with a reason given by the sample member. These sample members were eligible.

- FLAG_FIN=9

Returned blank - no reason. Survey was returned blank without an explanation. These sample members were eligible.

- FLAG_FIN=10

No return - temporarily ill or incapacitated. Survey was not returned and beneficiary was temporarily ill or incapacitated. These sample members were eligible.

- FLAG_FIN=11

No return - active refuser. Survey was not returned and beneficiary refused to take part in the survey. These sample members were eligible.

- FLAG_FIN=12

No return - deceased. Survey was not returned and beneficiary deceased. These sample members were ineligible.

- FLAG_FIN=13

No return - incarcerated or permanently incapacitated. Survey was not returned, beneficiary was incarcerated or permanently hospitalized. These sample members were ineligible.

- FLAG_FIN=14

No return - left military or divorced after date of initial sample pull, retired. Survey was not returned, beneficiary left service after initial sample pull, divorced after initial sample pull, or retired. These sample members were eligible.

- FLAG_FIN=15

No return - not eligible on date of initial sample pull. Survey was not returned, beneficiary was not eligible for Military Health System Plan on initial sample pull. These sample members were ineligible.

Example: Beneficiary turned 21 and is no longer covered under parents' plan.

- FLAG_FIN=16

No return - other eligible. Survey was not returned, beneficiary gave other reason for not completing the survey. These sample members were eligible.

Examples: Beneficiary claims they have not used benefits in past 12 months. Beneficiary is away at college, on a religious mission, or lives overseas. Received information that beneficiary chosen for survey does not speak English well enough to participate.

- FLAG_FIN=17

No return - no reason. Survey was not returned, beneficiary gave no reason. These sample members had unknown eligibility.

- FLAG_FIN=18

Postal Non Deliverable (PND) - no address remaining. All addresses were attempted, mailing was returned PND. These sample members had unknown eligibility.

- FLAG_FIN=19

PND - address remaining at the close of field. At the close of field, the last address used was found invalid, next available was not attempted. These sample members had unknown eligibility.

- FLAG_FIN=20

Original Non-Locatable - no address at start of mailing. Substantially incomplete or blank address field before the survey was administered, no mailings attempted. These sample members had unknown eligibility.

- FLAG_FIN=21

Beneficiary provides written documentation declining to participate but doesn't specify a reason. These sample members were eligible.

- FLAG_FIN=22

Beneficiary indicates they are hospitalized but without providing any way to determine whether incapacity is temporary or permanent. Therefore, eligibility determination can not be made. These sample members had unknown eligibility.

- FLAG_FIN=23

Returned blank - deployed. Survey was returned blank along with information that the beneficiary was deployed. These sample members were eligible.

- FLAG_FIN=24

No return - deployed. Survey was not returned, beneficiary was deployed. These sample members were eligible.

- FLAG_FIN=25

Deceased. Beneficiary coded as deceased due to refresh sample sent by Altarum. These sample members were ineligible.

- FLAG_FIN=26

No match. Not eligible indicated by Altarum-DEERS update. Beneficiary coded as no longer being eligible for TRICARE coverage due to sample refresh.

Tables 2.2.1-2.2.3 shows frequencies of these disposition codes by beneficiary category.

## Description of the Adult HCSDB Database

This chapter presents the procedures for developing the database, and presents the database file layout.

## VARIABLE NAMING CONVENTIONS

The conventions used to name variables on the 2016 Adult HCSDB data file are listed below and summarized in Table 3.1. The naming conventions remain constant across the three quarters of the 2016 HCSDB.

- Survey Variables. Variable names for core survey questions consist of up to eight alphanumeric characters that start with an alpha character ("H" for Adult survey variables), followed by a year designation (" 16 ") and ending with three numbers and, if necessary, one alpha character to identify the relevant survey question. Recoded variables have the same names as on the annotated survey. The original variables are suffixed with "_O"; these will not be on the public release file.
- Supplemental Question Variables. Each quarter, the questionnaire includes a battery of questions on specific health care topics concerning services offered to MHS beneficiaries. Like the core questions, supplemental questions also include up to eight alphanumeric characters; each variable begins with an " $S$ " to distinguish it as a supplemental question, followed by the year designation (" 16 "). The variable ends with an alphanumeric character or characters denoting the supplemental topic followed by the question number in the supplemental series as necessary.
- Self-Reported Data. Defense Manpower Data Center (DMDC) standard demographic selfreporting variables on the adult survey are prefixed with "SR." Survey variables with this naming convention include SRRACEA-SRRACEE (race/ethnicity) and SREDA (education).
- Coding Scheme Flags and Counts. Coding Scheme flags, variables like N1-N25, reference the notes in the Coding Scheme for the Adult Survey. See Appendix D for the Coding Schemes for Quarters I - III for more information. Coding Scheme counts are sums of missing value responses for each questionnaire; each of these variable names begins with the 4 characters "MISS."
- Constructed Independent Variables. Independent variables are prefixed with an "X." These include original survey variables modified as a result of data cleaning or recoding and newly constructed variables that did not previously exist on the survey file. For example, since the variable PNSEXCD was modified as a result of data cleaning and recoding, it was renamed XSEXA.
- Constructed Dependent Variables. Dependent variables are given different prefixes depending on function. Healthy People 2020 variables, for example, are prefixed with an "HP" and all other newly constructed dependent variables are prefixed with a "K."
- Constructed Restricted Use Variables. Original DEERS variables that have been recoded to maintain the confidentiality of the respondent are prefixed with "R."
- Weighting Variables. Quarterly weighting variables are prefixed with a "FW."

## CLEANING AND EDITING CONVENTIONS

Data quality procedures are found in the Coding Scheme tables. The complete Coding Schemes for Quarters I - III appear in Appendix D. They contain detailed instructions for all editing procedures used to correct data inconsistencies and errors. Editing procedures check for appropriate response values and consistent responses throughout the questionnaire. The steps to insure data quality include the following:

- Initial Cleaning. Missing value flags were encoded when Ipsos created the SAS dataset:
- Skipped items were encoded with SAS missing value code of $\quad$. .
- Data Cleaning and Recoding of Variables - Implementation of the Coding Scheme. Skip patterns were checked for consistency, and questions that were skipped legitimately were recoded with the SAS missing value of ". N "; questions that were answered, but should have been skipped, were recoded with a SAS missing value of ".C". When possible, variables were backward coded or forward coded to make all responses consistent within a sequence. Numeric values were checked, and values that were out of range were flagged with the SAS missing value of ". O ".
- Frequency Checks. Formatted and unformatted frequency tables for all variables in 2016 Adult HCSDB data file appear in Chapter 5 of this document. These frequency tables and other relevant cross tabulations were used to examine the range of values recorded for each data item to determine the type and magnitude of missing values. All value labels have been checked for accuracy.

## RECORD SELECTION CRITERIA

Blank returns, nonrespondents, and any respondents found to be ineligible for MHS benefits were removed from the database. In addition, among eligible respondents with a non-blank questionnaire, a questionnaire must be "complete" to be included in the database. If there are multiple questionnaires received from a single respondent, only the most complete questionnaire is retained.

To determine if a questionnaire is "complete", 20 key questions were chosen. These key questions were adapted from the complete questionnaire rule developed by AHRQ for CAHPS surveys. At least 50 percent of these key items (more than nine) must be answered for a questionnaire to be accepted as a complete questionnaire. The key survey variables are: H16003, H16005, H16006, H16009, H16013, H16018, H16019, H16027, H16028, H16031, H16033, H16040, H16043, H16048, H16051, H16052, H16065, H16073, SREDA, and the race indicator variables (SRRACEA-SRRACEE).

## Weighting Procedures

The analysis of survey data from complex sample designs, such as the 2016 Adult HCSDB, requires weights to do the following:

- Compensate for variable probabilities of selection
- Adjust for differential response rates
- Improve the precision of the survey-based estimates through post-stratification [for details, see Brick and Kalton (1996) and references cited therein].

Basic sampling weights are equivalent to the reciprocal of the probability of each respondent's selection into the sample. These basic sampling weights are further adjusted for nonresponse within the classes formed based on the percentiles of the propensity scores from the propensity model. Finally, we poststratified the nonresponse adjusted weights to the frame totals to obtain specific domain weighted totals equal to the population totals. Chapter 5 contains the weighted and unweighted frequencies for each variable in Quarters I-III. The combined annual data set presents the cumulative frequency, weighted and unweighted, of all of the survey variables from all three quarters.

The data set documented here combines three quarterly data sets and includes quarterly and annual weights. The quarterly weights (FWRWT) are based on the probability of being selected in a particular quarter. The annual weights (CFWT) are based on the annual probability of selection. Analysts should use annual weights when calculating cumulative statistics, such as an overall average health care rating. They should use quarterly weights when calculating quarterly statistics. For further details on the 2016 weighting, see "2016 Health Care Survey of DoD Beneficiaries: Technical Manual".

## Programming Guide

This chapter is designed to help users create tables and variance estimates. Procedures for using SAS, SPSS, and SUDAAN to create estimates are explained. Examples provided in the text are based on the 2016 HCSDB dataset.

## HOW TO MAKE A TABLE USING SAS

The 2016 Adult HCSDB dataset is provided in a SAS 9 format. SAS is a computer software system used for data management, summarization, and analysis. A format library for the adult database is included along with the dataset. SAS can be run interactively or non-interactively (in batch mode), and the sample programs presented here can be run using either method. Special instructions are given later in the chapter for working interactively with the SAS Display Manager System in a Windows environment. All SAS programs generate a LOG and a LST file. The LOG file shows how SAS interprets your program and flags SAS syntax errors. The LST file shows the requested output.

## File References, Libraries, and Options

SAS recognizes two types of datasets -- permanent and temporary. Permanent datasets, such as the HCSDB, are located through a LIBNAME that references the directory where the data is stored. For example, if the 2016 annual adult dataset is located on a CD-ROM in the subdirectory HCSDB161FORMAIYEAR2016, your LIBNAME statement must look like this:

LIBNAME INFORMA 'F:IHCSDB16IFORMAIYEAR2016';
The adult dataset can then be referred to as INFORMA.HCSDB16, where INFORMA is the location of the file HCSDB16.

A format library requires a LIBNAME LIBRARY statement that shows the location of the format library. For example, if the adult format library is stored on your hard drive in a FMTLIB subdirectory, the LIBNAME statement should look like this:

## LIBNAME LIBRARY 'C:IHCSDB16IFORMAIYEAR2016IFMTLIB';

The OPTIONS statement controls page format and line length. A table with a "portrait" orientation might have this statement:

## OPTIONS PS=79 LS=132;

A table with a "landscape" orientation that is left justified would have this OPTIONS statement:
OPTIONS PS=50 LS=175 NOCENTER;

## DATA Step

The DATA step is used to create permanent or temporary datasets. It is also used to create new variables, modify existing variables, and limit the number of variables or observations. In a DATA step, you can do any or all of the following activities:

- Construct new variables. For example, to construct a variable of Active Duty by sex:

```
|* Active Duty males */
IF XSEXA = 1 AND XBNFGRP = 1 THEN XSEX_AD = 1;
* Active Duty females;
ELSE IF XSEXA = 2 and XBNFGRP = 1 THEN XSEX_AD = 2;
ELSE XSEX_AD = .; l* missing value */
```

[Note: the two methods to insert comments: enclosed within /* */ or beginning with * and ending with a semicolon]

- Modify existing variables. For example, if the respondent is in region 7, the respondent will be placed in the combined region $7 / 8$ :

```
IF XREGION = 7 THEN XREGION = 8
```

- Limit the number of variables. Use a KEEP statement:

## KEEP XREGION SVCSMPL H16050 H16052;

- Limit the number of observations. Use a subsetting IF:

## /* Keep only TNEX region 3 observations */ <br> IF XTNEXREG = 3;

- Create a new temporary dataset. For example, SVC_1 is a temporary file of observations for only those respondents in service branch 1 (Army):

LIBNAME INFORMA 'F:IHCSDB16IFORMA';
DATA SVC_1;
/* Input file is HCSDB16 */
SET INFORMA.HCSDB16;
IF SVCSMPL = 1;
RUN;

- Create a new permanent dataset. For example, OUT.SVC_2 is a permanent dataset only of Navy respondents:

LIBNAME INFORMA 'F:IHCSDB16IFORMA';
LIBNAME OUT 'C:IHCSDB16IFORMA';
DATA OUT.SVC_2;
SET INFORMA.HCSDB16;
IF SVCSMPL = 2;
RUN;

## PROC TABULATE

PROC TABULATE produces summary statistics in a table layout. The table can have up to three dimensions: page, row, and column. Within any dimension, multiple variables can be reported one after another or hierarchically. Useful statistics that are available in PROC TABULATE include:

- N number of observations with nonmissing values
- NMISS number of observations with missing values
- MEAN the arithmetic mean
- SUM the sum
- PCTN percent that one frequency represents of another frequency
- PCTSUM percent that one sum represents of another sum

The essential elements to execute PROC TABULATE are outlined below (items within < > are not required):

## PROC TABULATE DATA=your dataset <option list>; CLASS class variables; VAR analysis variables; <br> TABLE << page expression, > row expression, > column expression </ table options >; WEIGHT CFWT; <br> RUN;

If the input file is to be limited to a specific population, a separate DATA step can precede the TABULATE, or a WHERE statement can be used within the TABULATE procedure. For example, to create a table from only respondents in service branch 1, you would use the following statement after the PROC TABULATE statement:

## WHERE SVCSMPL = 1;

CLASS variables are any variables that are used for grouping; variables such as XTNEXREG, XSEXA, and SVCSMPL are good examples of class variables. Class variables can be either character or numeric and typically have a discrete number of values. Unless MISSING is specified in the options list in the PROC TABULATE statement, any observations with a missing CLASS variable will be dropped from the table.

The VAR statement identifies all analysis variables for a table. Analysis variables must be numeric and can be either discrete or continuous. SAS excludes missing value when computing statistics such as means and percentages.

The WEIGHT statement identifies the numeric variable whose value is used for weighting each analysis variable. In the 2016 annual HCSDB, the weight variable is CFWT.

The TABLE statement defines the table features. Every variable listed in this statement must be classified as either a class variable or an analysis variable in the CLASS or VAR statements. A comma separates each table dimension (page, row, and column). If there are three dimensions, the first is the page, the second is the row, and the last is the column. If there are only two dimensions, the first is the row and the second is the column. Tables with only one dimension are in column form. Each dimension expression is composed of the same following elements:

- Analysis variables
- Class variables
- The universal class variable ALL, which summarizes the class variables in the same group or dimension
- Keyword for the statistic to be performed, such as MEAN, SUM, or PCTSUM
- A format modifier, which defines how to format values in cells. For example, $\mathrm{F}=8.2$ will present values with a maximum of 8 positions and 2 digits to the right of the decimal.
- Labels, which temporarily replace variable names and statistic keywords. These labels have the form ='label'; for example, XTNEXREG='TNEX Region' or MEAN=' ' (to eliminate the word MEAN from the headings).
- Crossing operator * (asterisk). The asterisk is used to cross elements within the same dimension. For example, you would use XENRLLMT*XSEXA to cross enrollment status by sex. The asterisk is also used to connect the statistic (e.g., MEAN, SUM) to the appropriate dimension; for example, to calculate the mean of respondents' satisfaction with all health care in the last 12 months, you would use H16018*MEAN.
- Denominator definitions are enclosed by < > (brackets).
- Concatenation operator is a single space between elements in a dimension. For example, to concatenate satisfaction with all health care in the last 12 months with satisfaction with health plan, you would use H16018 H16048.
- Grouping is accomplished with parentheses. Below is an example of grouping, concatenation, and crossing within a single dimension:

## (XBNFGRP ALL)*XSEXA

## The SAS Display Manager System

The SAS Display Manager system provides an interactive tool for running SAS commands, like those given above, in the Windows environment. Double clicking the SAS icon on the desktop begins the SAS session. When you first enter SAS version 9 , the following screen opens.

The screen is divided into two windows, a Log window above and an Editor window below.
The Window Bar at the bottom of the screen includes tabs for the Log and Editor windows with an additional tab for the Output Window. Clicking on the Output tab will open the Output window. The instructions in this document will outline options for setting up the Editor and for displaying the windows themselves.

The default editor for version 9 is the SAS Enhanced Editor which is color coded to check SAS syntax. Another editing option is to use the Program Editor which includes line editing options. We will describe procedures for setting up the Program Editor.

Click on View and select Program Editor as in the following:

The lower Editor Window has now changed to Program Editor as in the following screen:

Open the Tools menu and choose Options and Preferences.

Many of these settings are system default options. To add a command line to the three windows, do the following. Click on the View tab and click in the box opposite Command Line as follows:

Click on OK and a command line will be added as in the screen below.

Each window shows the word Command followed by an arrow. Commands may be typed at this location. To arrive at the command line, depress the Home button on your keyboard. The cursor will appear opposite the arrow.

Toggling among the windows may be accomplished by typing the desired window name at the command line and pressing Enter. SAS recognizes Pgm as the abbreviated reference to the Program Editor and Out as a shortened name for the Output window. A few keystrokes allow you to navigate among the windows. For example, the command line lets you continue to customize our SAS session as follows.

In order to more easily distinguish between the SAS windows, it may be preferable to change the background color of selected windows. As an example, set the background color of the Log window to yellow and the Output window to gray. Press the Home key to arrive at the command line. Type Log opposite the arrow to toggle to the Log window. Type the command, color back yellow (or some other color) on the command line. Your screen will resemble the following.

Press Enter to process the commands and the window will shade to yellow. Toggle to the Output window by typing Out and keying Enter. Type color back gray and key Enter. Return to the Program Editor and the screen will look like the following.

All SAS statements for building and processing SAS datasets are typed into the Program editor. A SAS session may involve typing statements like the ones above for library reference, computing new variables, data steps, etc. Entering a long series of statements in such a small space may be awkward, so another arrangement for the windows may be preferable.

Cascading the windows is one option. To cascade the windows, open the Window menu, and choose Cascade as indicated in the following.

Clicking the option Cascade produces the following result.

Each window is partly superimposed on the other. The colors distinguish between windows at a glance. With the Program Editor in front, SAS statements may be typed there with relative ease. As a final option, you can enlarge the Program Editor to fill the entire screen. At the command line, type zoom as in the following:

The window changes to fill the screen.

One more option for customizing screens is explained below. This involves adding line numbers to the editing environment in the Program Window. After adding the line numbers, many useful line-editing commands become available (see the SAS Manual). At the Command line type "numbers on" as in the following screen.

The line numbers appear at the left of the full screen Program Editor as in the screen below, and the SAS statements can be typed into the screen and edited.

Below is an example of a PROC TABULATE to construct a table of health status and respondent's weight by beneficiary group and gender for respondents in TNEX region 3. Beneficiary group (XBNFGRP) and sex (XSEXA) are both class variables with a discrete number of values. The columns of the table are beneficiary group broken out by sex, a total for each beneficiary group, and a region total. The variables (H16072 and H16065) are the analysis variables appearing as the rows of the table. The statistic that we want to see is the weighted mean of these variables for each group in the table and for the entire region as a whole.

Enter the following SAS statements into the Program Editor.
OPTIONS PS=79 LS=95;
LIBNAME IN 'C:IFILESIDoDIADULT 2016';
LIBNAME LIBRARY ‘C:IFILESIDoDIADULT 2016IFMTLIB’;
PROC TABULATE DATA=IN.HCS16A_1;
WHERE XTNEXREG = 3; $I^{*}$ limit to TNEX Region 3 *
CLASS XBNFGRP XSEXA;
VAR H16072 H16065;

TABLE (H16072 H16065)*MEAN, /* Row Dimension *
XBNFGRP*(XSEXA ALL) ALL; I* Column Dimension *
TITLE "Table 4.1";
TITLE2 'Constructed Beneficiary Group by Gender for TNEX Region 3';

## RUN;

Key Home and type the command SUBMIT on the Command Line. Submit instructs the SAS system to process the commands written in the Program Editor. Your screen should resemble the following.

Enter the Submit command, and the SAS statements disappear from the Program Editor. If a table is successfully produced, the Output window will open and the table will be displayed. If no output is produced, then SAS has encountered an error. SAS statements about the error can be seen and evaluated in the Log window. In all cases, the Log window should be carefully examined after SAS statements are processed. SAS may produce a table even if there are errors in the program, so the table may not be correct.

No table was produced for this run. The error is indicated in the Log Window as shown below.

The variable FWT was not found in the dataset. Type Pgm on the Command line to return to the Program Editor. Type Recall on the Command line and the program statements will reappear in the window.

You can correct the error by entering CFWT, the correct variable name, in the weight statement. Then, rerun the procedure.

The corrected program produces the following output.

The result of this process is Table 4.1.
Note that the TITLE statement defines the heading for each page. Titles of more than one line are entered as TITLE, TITLE2, etc.

## Using Formats

The format library is the key to interpreting values of discrete variables. For example, in the program above, the format library found at C:IFILESIDoDVADULT 2016IFMTLIB indicates that a Value of 1 for XSEXA means male, and a value of 2 for XSEXA means female. Similarly, if XBNFGRP equals 1 , the respondent is Active Duty; if XBNFGRP equals 2, the respondent is a family member of Active Duty personnel; if XBNFGRP equals 3, the respondent is an under-65 retiree or a survivor or one of their family members; if XBNFGRP equals 4, the respondent is a 65-or-over retiree, survivor, or one of their family members.

Since formats are associated with the variables in the HCSDB, formatting is automatic as long as SAS can locate the format library. Error messages will result if the LIBNAME LIBRARY statement is not present. If the format library is not available for some reason, use the statement

FORMAT ALL;
within the PROC TABULATE to prevent SAS from searching for the missing format library. The default formats in the format library were used to produce the table described in the previous section.

## Table Appearance

Format modifiers and temporary labels improve the appearance of a table. In Table 4.1, the values of the statistics are of the form xxx.xx. If each cell is defined to be six positions wide with two positions to the right of the decimal, there is adequate space to keep the table from looking crowded. This is done by crossing the statistic with the format modifier:

## MEAN*F=6.2

Labels are attached to all variables in the HCSDB. You can use temporary labels to override the label within the SAS dataset. It is not always necessary to use both the variable label and the formatted values for each value of a class variable. In the previous example, the formatted values of XBNFGRP are Active Duty, family members of Active Duty, etc. which we know to be beneficiary groups; the title also tells you that these are beneficiary groups. The table can be made attractive by deleting the heading for XBNFGRP by including a blank for the temporary label:

## XBNFGRP=’

Similarly, because the statistic being reported here is a mean, you do not need MEAN on each row. You can add or eliminate a label and include a format modifier to the same variable:

MEAN=’ ‘*F=6.2
The headings for XSEXA and ALL can be improved:
XSEXA='Gender'
ALL='Group Total' for the ALL that is crossed with XBNFGRP
ALL='Total' for the TNEX Region 3 total

The new program looks like this:
OPTIONS PS=79 LS=95;
LIBNAME IN 'C:IFILESIDoDIADULT 2016';
LIBNAME LIBRARY ‘C:IFILESIDoDIADULT 2016IFMTLIB’;
PROC TABULATE DATA=IN.HCS16A_1;
WHERE XTNEXREG = 3; $\quad$ * limit to TNEX Region 3 *
CLASS XBNFGRP XSEXA;
VAR H16072 H16065;

TITLE "Table 4.2";
TITLE2 ‘Constructed Beneficiary Group by Gender for TNEX Region 3'; RUN;

Typing these statements into the Program Window produces the following screen.

After the Submit command is entered, the following table is displayed in the Output window.

The resulting output is in Table 4.2.

Table 4.2
Constructed Beneficiary Group by Gender for TNEX Region 3

Although the label for MEAN is deleted, there is still a space in the table for this label. You can eliminate this blank space by using the TABLE option of ROW=FLOAT. SAS row headings are automatically allocated; you can override this by using the TABLE option of RTS=n where n is an integer value specifying the number of print positions to be used for row headings. If you decide that we don't need the label 'Gender' for XSEXA because 'male' and 'female' are self-explanatory, the revised program is as follows:

```
OPTIONS PS=79 LS=95;
LIBNAME IN `C:IFILESIDoD\ADULT 2016';
LIBNAME LIBRARY `C:IFILESIDoD\ADULT 2016IFMTLIB';

Typed into the Program Window, the revised program appears as follows.

The output table is displayed in the Output Window as follows.

## Calculating Percents

When calculating percentages, it is necessary to appropriately define the denominator. To calculate a column percentage, the denominator definition must include all class variables that define the row. For example, if you want to look at the percentage of people in region 2 and each branch of service who answered yes (or no) to variable H16052, 'Have you ever smoked at least 100 cigarettes in your entire life?', your TABLE statement in the TABULATE procedure would look like this:

```
WHERE XTNEXREG = 2;
TABLE H16052 ALL='Total',
(All='Region Total' SVCSMPL)*PCTN<H16052 ALL>='Percent';
```

Table 4.4 includes a program and its output for calculating column percentages.
The program statements in the Program Editor appear as follows.

The submitted statements produce the following output.

Table 4.4

The statistic $N$ is included with PCTN to make it easier to verify that the denominator definitions have been set up properly. After you check to see that the percentages are accurate, the N statistic can be removed. Note that the output for Table 4.4 is unweighted. The N statistic (and PCTN statistic) is always unweighted even if a WEIGHT statement is included.

Similarly, if you want to look at the percentage of TRICARE enrollees (and non-enrollees) by gender who report having smoked at least 100 cigarettes in their lifetime, this would be a row percentage. To calculate a row percentage, the denominator definition must include all class variables that define the column. Your TABLE statement would look like this:

## TABLE H16052 ALL='Total', XENRLLMT *(XSEXA=' ' All='Group Total')* <br> PCTN<XENRLLMT*XSEXA XENRLLMT*ALL>='Percent';

Notice that there are no parentheses used in the denominator definition. Because parenthetical groupings are not allowed in the denominator definition, all crossings and concatenations must be included. As noted above, the N and PCTN statistic are unweighted counts of CLASS variables. If you want to produce a weighted count and percentage for this table, you would include CFWT (the 2016 annual weight variable) as an analysis variable in the VAR statement and in the column crossing of the TABLE statement; the statistics to be generated should be specified as SUM and PCTSUM. A program and output to demonstrate weighted row percentages appears in Table 4.5.

The following screen shows the new program typed into the Program Editor.

These commands produce the following output.

Here, as above, the SUM statistic is included to help determine the accuracy of the denominator definition.

Additional information about running SAS is available from the SAS Institute. Please consult the appropriate manuals for more detailed information.

## HOW TO MAKE A TABLE USING SPSS

The 2016 Adult HCSDB dataset is in an SPSS format. SPSS is a computer software system used for data management, summarization, and analysis. SPSS can be run interactively, using menus, or in batch mode, using syntax commands. This guide instructs users on how to use SPSS dialog boxes to:

- Construct new variables
- Recode existing variables
- Select cases for analysis
- Weight cases for analysis
- Create customized tables

As you use the dialog boxes, you generate syntax automatically. This syntax may be pasted into a syntax file for future use or for modification.

## Locating and opening the data file

To begin an SPSS session, double click on the SPSS icon on your desktop. The Data Editor window will open and present a spreadsheet with a dialog box. Click Cancel in the bottom right corner to close the dialog box and a blank spreadsheet will appear:

## Constructing new variables

Data can be evaluated from many different aspects. It is sometimes useful to build new variables from combinations of the existing ones and to examine their distributions.

For example, the variable in the file for beneficiary group at the time of sampling is called xbnfgrp, and the variable for sex is xsexa. The value 1 for xbnfgrp indicates that the individual is on Active Duty. The relationships for constructing a new variable of Active Duty by sex are:

Active-Duty-males: xsexa=1 and XBNFGRP=1
Active-Duty-females: $x$ sexa=2 and XBNFGRP=1
Open the Transform menu and select Compute Variable as in the following:

You can build the new variable in two steps to express the two conditions. The first task is to give the new variable a name and its first value. Enter the Target Variable slot and name the new variable sex_ad. Next, assign the value 1 to sex_ad by entering it into the slot for Numeric Expression. Your screen should look like the following:

Once you we have assigned the value 1 to sex_ad, you can build the condition that qualifies the assignment. Click on If and open the following dialog box:

Click on the circle indicating Include if case satisfies condition, and the black dot will move to that circle. The slot underneath will open, ready for your input. Build the "if" condition. Write it directly into the slot or move the elements into the slot from the given options. Add the elements $\mathrm{xsexa}=1 \& x b n f g r p=1$.

The screen should resemble the following:

Click on Continue and return to the previous screen, which will now look like this:

Your condition will be written next to the If button. Click on OK to exit the dialog box, and the variable sex_ad will be created with its value set to 1 .

The next step is to build the second condition for the new variable, which will set it to the value 2 . Reopen the Compute dialog box. The commands you just gave still appear in the dialog box. Simply assign the value 2 to sex_ad, press If, and enter the new condition to identify Active Duty females. Click Continue, and finish with OK. A dialog box that says "Change existing variable?" will pop up. Click on OK, and the condition, if $x$ sexa $=2$ and $\times b n f g r p ~=1$, will be added to the new variable sex_ad.

Once you have created a new variable, you may want to add it permanently to the dataset. The new variable is computed for each case in the file and added to the view in the Data Window after the last variable in the dataset. The variable name is the column heading.

Since the HCSDB data set carries Read-Only status to protect it from corruption, changes to it cannot be saved. At the end of the day, when the work session ends and you exit SPSS, the file will revert to its former status and the new variables will be lost. The solution is to save the dataset under a new name when you exit. Choose the Save As option on the File menu, and you will be prompted to name the file and to save it in a folder of your choosing. Give the file a new name and save it. Open the new expanded file anytime for processing.

Suppose you do not want to use up your disk space for expanded copies of the dataset. Another option is to save the syntax you have generated in a file that can be run as it is needed. Syntax is a written instruction generated by the commands you give in a dialog box. These "sentences" can be saved in a file and executed when needed. This is the batch mode of processing syntax commands. Syntax files take up very little space.

Experienced SPSS programmers, who have mastered SPSS syntax, often prefer to work only in batch mode. This option is available to users who have not mastered the syntax language. You can paste the commands, generated interactively in the dialog box, onto a syntax file.

Recall the compute example for the new variable sex_ad. The screen below is the result of assigning 1 to sex_ad according to an If condition. You clicked on OK to set the value. Returning to the screen and clicking on Paste writes the command to a syntax file.

Click on the Paste button. A dialog box that says "Change existing variable?" will pop up. Click on OK, and the syntax window below will open with the syntax written in it.

Now return to the compute dialog box.

Assign the value $\mathbf{2}$ to sex_ad and build the "if" condition as in the diagram above. Select Paste, and these commands will be appended to the syntax file.

The results appear in the screen above. SPSS gives default names to syntax files, such as Syntax1, Syntax2, etc., as they are created. It is a good idea to save the syntax, re-naming the file using the Save As option on the File menu. Use a name that has some meaning to you, e.g., New_computes. The file will automatically receive the suffix .sps.

Another option for adding new variables to the dataset is to Recode existing variables into new variables. A common example involves grouping an age variable into age categories as shown below, using the variable RFLDAGE, which exists on our dataset. RFLDAGE is coded in years from 18 to 86, which can be grouped into four age categories:

18 to $34=1$ - label: "young adult"
35 to $49=2$ - label: "mature adult"
50 to $65=3$ - label: "middle-age"
66 to $86=4$ - label: "senior citizen"

The new variable is called age_grp.

From the Transform menu, choose Recode Into Different Variables as pictured below:

The following dialog box will open:

Move RFLDAGE from the variable list on the left to the box labeled Input Variable -> Output Variable. In the Name slot, enter the new variable name age_grp. Enter Age Categories, the variable label, in the Label slot. Click on Change. The dialog box should look like the one below.

Click on Old and New Values, and the following dialog box will open:

The next step in grouping the age variable is to specify the existing values of Age to be recoded. To do this, click on the Range circle under Old Value.

Once the appropriate slots are open, you have four ranges to enter.
First, enter 18 through 34 in the slots provided under Range. Next, enter the value $\mathbf{1}$ in the Value slot under New Value. Add is now illuminated.

Clicking on Add produces the following result:

The specified range appears in the box labeled Old -> New, and the Range and Value slots have been cleared to permit additional entries.

The three remaining ranges are built in the same manner, adding each specification, until the dialog box looks like the one below.

Click on Continue and return to the previous screen.

Click on OK to exit the screen. The new variable age_grp has been created. The Recode syntax can be pasted to a syntax file.

The final task is to create the value labels for the new variable age_grp. Labeling variables makes output from statistical reporting procedures much clearer and more elegant.

In the Data Window, go to the column for the new variable age_grp and double click in the gray area containing the variable name. The screen will change to variable view:

The variable age grp is shown with its attributes.
Click in the cell under Values and the following dialog box will open:

You can then begin to label the values of age_grp. Enter $\mathbf{1}$ in the slot marked Value, and enter the label Young Adult in the slot marked Value Label. The screen will look like the following:

Add is now illuminated. Click on Add and the text of your command will appear in the central box, clearing the slots for further entries, as in the next screen.

Build the other three labels until the screen looks like the following:

Click on OK and the screen will appear as follows:

## Limiting the Number of Variables

The HCSDB dataset contains many variables. To speed up software performance time, it may be desirable to limit the number of variables for analysis. There are ways to do this.

The first is to Save a subset of variables in a new file with a new name. This option is available only through syntax. The Keep or Drop command lets you save a subset of variables. The choice of Keep or Drop is dependent on which list is shorter to write.

For example, suppose you want to run some procedures to evaluate respondent's weight as it relates to their state of health. You are also interested in people that have smoked at least 100 cigarettes in
their lifetime, and in differences within these groupings by gender. Moreover, you want to look at regional differences and differences among branches of service by beneficiary group and enrollment. You can do all the work on a subset of only nine variables, saving them in a separate file.

To write the syntax, open a syntax window. If you want to create a new syntax file, choose New, Syntax on the File menu as in the following:

A blank syntax window will open.
Write the following command, substituting the file name and directory specification:

## SAVE OUTFILE=’C:IMYFILESIHLTHCARE.SAV'IKEEP=XTNEXREG XSEXA XENRLLMT SVCSMPL CFWT XBNFGRP H16052 H16072 H16065.

as in the following:

Upper case is optional. Be sure to enclose the entire file name in single quotes and to type a period at the end of the command.

Run the command by choosing the Run menu and selecting All from the choices.

Open the new file according to the specifications at the beginning of this chapter.
The second way to limit the number of variables for analysis is to define a subset of variables that will appear in the dialog boxes for procedures. Using the Utilities menu, define a subset of variables as in the following:

Select Define Variable Sets.

Insert a name for the subset of variables in the slot labeled Set Name. Move the variables you want to subset from the list on the left to the slot marked Variables in Set. By way of illustration, we will move the nine variables selected for the day's processing.

The screen should look like the following:

Click on Add Set to save the set specifications. The screen will change to the following:

The set is now available for use. To use the set, Close the dialog box, reopen the Utilities menu, choose Use Variable Sets..., and receive this screen:

Click the checkbox next to HLTHCARE, and unclick the checkbox next to ALLVARIABLES. Leave NEWVARIABLES as is. OK saves this change.

Until you change this specification, only nine original variables and any new variables will appear in the dialog boxes associated with procedures.

## Limiting the Number of Observations

There are many ways to limit the number of observations available to statistical reporting procedures. The method illustrated here involves using filter variables with a menu-driven Filter By option. Using filters deactivates but does not delete cases from the file. A diagonal line appears next to the filtered cases in the Data Window.

The first task is to compute a filter variable for all the cases in the file. A filter variable has two values: $\mathbf{0}$ and $\mathbf{1}$. The $\mathbf{1}$ indicates that the case will be included for procedures. The $\mathbf{0}$ flags the case for removal.

For example, suppose you want to produce a table for people who live in the West, i.e., cases for which the variable xtnexreg $=\mathbf{3}$. You would build a filter variable named filtr_3, which has the value $\mathbf{1}$ associated with the cases in the West and 0 for all the other cases in the file. The logic is: if xtnexreg $=3$, then filtr_3 $=1$, else filtr_3 $=0$.

The screen below shows the final step in computing the filter variable. The variable was first initialized to 0 . Then, the "If" condition was built for setting the filter variable to $\mathbf{1}$. You are now working with a subset of variables, allowing the dialog boxes to be used more efficiently.

The screen that follows shows the syntax that was generated as you built the variable filtr_3.

Once you build the filter variable, you can apply it for analyzing only those people from the West. Using the Data menu, choose Select Cases.

In the dialog box, check Use filter variable. Move the variable filtr_3 from the variable list on the left side of the dialog box into the slot provided, as indicated below. Check that the option Filter out unselected cases is checked under Output. This is the default option.

Click OK and exit the dialog box.

When you return to the Data Window, notice the slanting line next to some of the cases in the file. Those cases have been filtered out.

You can now produce tables for the subset of cases.
When using filter variables, it is important to check the filter status and to adjust it to fit the present need. Filtered cases are not available for procedures. Moreover, a filter is in effect until it is turned off or until another filter is activated. Check the status line at the bottom of the Data Editor window to see if a filter is activated. In the example above, Filter On is indicated on the status line. To see which filter is active, you must re-enter the Select Cases dialog box. There you can deactivate the filter or activate a new one.

To deactivate a filter, choose All cases and OK as in the screen below.

## Weighting Data

The data file includes a weighting variable, CFWT, which should be applied to all procedures and runs. Again, using the Data menu, choose Weight Cases. In the dialog box, choose Weight cases by. Move the weight variable from the list on the left into the slot labeled Frequency Variable on the right as shown below:

Click on OK and exit the dialog box. The indication that the data is weighted appears on the status line near the bottom of the screen. As in the following screen, Weight On is specified there.

The status line indicates if the data is weighted. Which weight variable is in effect can only be checked by re-entering the Weight Cases dialog box. Weighting stays in effect until it is canceled or until another weight variable is activated.

## BUILDING TABLES

Building tables starts with creating a new subset of variables that includes H16052, H16072, H16065, svcsmpl, xbnfgrp, xsexa, xtnexreg, xenrllmt, CFWT, and filtr_3. The procedures Means and Crosstabs will probably meet most of your statistical reporting needs. SPSS also offers many options for editing the output tables themselves. Some of these options are explained here.

## CALCULATING MEANS

As an example, suppose you want to analyze the health care variables and you want to focus on the West (xtnexreg = 3). Suppose you are also interested in how the respondent's weight relates to his
self-evaluation of his health for the West region. Within this grouping, you want to examine the effects of the beneficiary group, xbnfgrp, and sex, xsexa.

The health care variables are H16072 (respondent's weight), and H16065 (assessment of the state of health). The statistic you want to see is the mean of the health care variables for each group in our breakdown.

For this analysis, you can use the subset of variables defined above. The subset includes the weight variable, CFWT, which you would activate for procedure runs. The subset also includes the new variable, filtr_3, which allows us to select only those cases in the West.

Open the Data menu in the Data Window. In the Weight Cases dialog box, activate the weight variable CFWT. Reopen the Data menu and, in the Select Cases dialog box, activate the filter variable, filtr_3. On the status line, Filter On and Weight On should appear.

Open the Analyze menu in the Data Window. Choose Compare Means and Means from the options as illustrated below.

The dialog box for the Means procedure will open as in the following screen:

Move the variables $\mathbf{H} 16072$ and $\mathbf{H} 16065$, from the variable list on the left to the box underneath Dependent List. These are the two analysis variables. Notice that Layer 1 of 1 is specified in the middle of the dialog box. Move XBNFGRP from the variable list on the left into the box under Independent List. XBNFGRP is the first grouping variable. The screen should look like the following:

Click on Next in the center of the box to create a second layer. The following screen will open:

Notice that Layer 2 of $\mathbf{2}$ is specified in the middle of the dialog box. Move xsexa from the variable list on the left into the box under Independent List. Xsexa is the second grouping variable. The screen should look like the following:

To set some options, click on Options and the following dialog box will open:

On the left of the box is a list of statistics, under Statistics. These are all the possible options for statistical output. In the box under Cell Statistics are the default output statistics for the analysis. In this case, Mean is the statistic of interest. Highlight Number of Cases and Standard Deviation and move them to the box at the left, removing them from the analysis, as follows:

Click on Continue and return to the previous screen. Click OK. The Means procedure will run. On the status line, Running Means will appear, and a counter for the number of cases processed will be activated.

When Means has finished processing, the Output Navigator window will open automatically. As the name suggests, the output window is not just for looking at output. A number of options are available for navigating through output, moving tables, and even editing the tables themselves.

The output is organized into two sections. On the left side is a navigating tool, which lists the components of the right side, the actual output. In the left pane, Means is indicated, and indented under it appear Title, Notes, Case Processing Summary, and Report. Clicking on Means highlights and selects all the elements. Lines appear around these elements in the right pane. The indenting indicates that the elements are hierarchically organized, with Means at the top. Clicking on any of the sub-elements selects just that element.

A closer look at the left pane reveals another feature. Hiding underneath the element icons are book icons. The books are either open or closed. If a book is closed, the element is hidden. Notice that the book under the Notes icon is closed. This is a default SPSS option. Double-clicking the icon will open the book, and the Notes will appear in the output. Double-clicking an open book will close it, and the physical element will disappear from the output. Closing a book and hiding the element does not delete the element.

It is possible to select elements in the right pane of the output. Simply click anywhere inside of the actual output element, and that element will be selected.

The output may contain many different procedures. The procedure name will be at the top of the list for each section in the left pane. The procedure name does not actually parallel physical output but indicates the category of the output elements.

As you click on each element in the left pane, you will notice that the screen jumps to the actual output of the element, in the right pane. When you click on the procedure name, you jump to the beginning of the next procedure output. This is a quick way to scroll through your output. It also lets you delete, move, and edit selected elements.

To Edit the Title element, Means, to create a more appropriate title, select the table title by clicking once on the Title icon in the left pane. A box now surrounds the title in the right pane. Double-click anywhere within this box, and a box appears around Means, as shown in the following screen.

You have entered the edit mode for this element, and the cursor appears inside the box. You can delete the word Means and write a title that relates to the information in the table. A possible title appears in the next screen. To exit edit mode, click anywhere outside the box. The change you made will be saved.

If you navigate to the next element, Notes, you see a closed book. Double-click this item, and the notes will appear as follows:

Decide if you want this information to appear in your report. If not, simply double-click the Notes icon, and the notes will again become hidden.

Navigate to Case Processing Summary. The table gives useful information about the number of cases included in and the number of cases excluded from a given procedure. This information is important for the researcher but probably not necessary for the report, so you would double click this item to hide it.

Navigate to Report to see the actual table output from the procedure Means. You can view this table by scrolling through the output. If the table is large, however, scrolling in the output window can be problematic. A better way to review the table is to open it as a Pivot Table Object in a special editor.

Select the table by clicking the Report icon or by clicking inside the table itself. A box will appear around the table. Insert the mouse pointer inside the table and right-click, opening the following dialog box:

Select Edit Content and In Separate Window as pictured below:

The table will appear in a new screen superimposed on the output. Maximize this screen as shown below.

In this special editor, there are many options for formatting the table.
Suppose you want to change the table format from vertical to horizontal. Open the Pivot menu in the tool bar and choose Transpose Rows and Columns as shown below:

The rows and columns will be reversed as shown in the following screen. Though the table appears too wide in the viewer, it will fit the page when printed. You can do all the table editing in the left section of the table, and the changes will spread through the entire table.

You would then notice that certain labels are redundant. The labels, Beneficiary Group and Male or Female - $\mathbf{R}$ are the Variable Labels for the variables. The information in these labels is echoed in the Value Labels, which are also reproduced in the table. You would delete the Variable Labels as follows.

Click inside the section of the table where the label, Beneficiary Group, appears. Right-click to open a dialog box, choosing Hide Dimension Label, as illustrated below.

Click inside the table section labeled Male or Female - R and repeat the above procedure. An improved table is shown in the following screen.

## Calculating Percents

The Crosstabs procedure offers many options for analyzing data. The distribution of cases resulting from "crossing" one variable with another is often of interest. The number of cases, row percentages, column percentages, total percentages, and residuals are easily reproduced by Crosstabs. A full array of statistics is also available.

The examples given here involve examining relationships between variables, with a view toward the number of cases and the percent of cases in cells produced by "crossing" the variables.

For example, suppose you want to see the percentage of people within each branch of service who answered "yes" or "no" to the question, "Did you ever smoke at least 100 cigarettes in your life?" The variables in this analysis are svcsmpl - the branch of service, and H16052 - the questionnaire variable. The cases for the analysis are from the South only.

The first task is to build a new filter variable, assigning 1 to the variable when XTNEXREG = 2. You would call the variable filtr_6 and build it the same way you built the filter, filtr_3. Cases from the South are selected when you activate the filter, and the other cases are filtered out. Check the status line for Filter On.

Next, open the Analyze menu in the Data Window, choosing Descriptive Statistics and Crosstabs , as shown below.

The Crosstabs dialog box will open as follows:

Move H16052 from the variable list on the left into the box marked Row(s):, and move the variable svcsmpl into the box marked Column(s):. The screen will resemble the following:

For this analysis, there are no Layer variables, so you can proceed to format the table cells.
Click on Cells... and open the following dialog box.

Under Counts, Observed is checked. This refers to the cell count, a statistic you want to see, so you would leave it checked. Under Percentages, check Column because you are interested in the percentage of people in each branch of service. Click Continue and return to the original screen.

Suppose you also want to see the chi-square statistic. Click on Statistics, and the following screen will open:

If you wanted to calculate chi-square, you would check Chi-square as in the screen above, click Continue to return to the first screen, and click OK to run the procedure. Running Crosstabs will appear on the status line, together with the case counter. For this crosstabulation we will not reflect the chi-square statistics.

When the run is completed, the output window will open, and you can proceed to reformat the table. For a given work session, SPSS appends new output to previous output--in our case, the Means procedure. As shown in the next screen, a second section now appears in the left pane, headed by the word Crosstabs. Navigate to the Title section and double-click inside the title box to change the text in the box to fit the table, as in the example below.

As you did for the Means procedure, you would again evaluate the Notes and examine the Case Processing Summary. Hide the Notes and the Case Processing Summary as you did before.

Navigate to the procedure icon. Follow the procedure for opening an SPSS Pivot Table Object, open the table in the special editor and maximize the screen as in the following:

Pivot Table Smoked at least 100 cigarettes in life * SVCSMPL - Branch of Service Crosstabulation

File Edit View Insert Pivot Format Help

The information you requested is in the table, but the table is hard to read. The first possibility is to realign the percent statistic, bringing it into the row dimension. To do this, open the Pivot menu and choose Pivoting Trays, as in the following screen:

The pivoting tool will appear:

This tool reflects the table structure: rows, columns, and layers. The icons in the margins of the pivoting trays represent the table elements: the variables and the cell statistics. Place the mouse pointer on each icon and notice the element name appear. In this example, on the ROW axis, you would find the variable, H16052 - smoked at least 100 cigarettes in life, and Statistics - the percent of people in each branch of service. On the column axis is the variable, svcsmpl - the branch of service.

Place the mouse pointer on the Statistics icon. Click and drag the icon from the ROW to the COLUMN dimension. The table immediately reformats as in the following screen:

Close the pivoting tool and scroll from side to side in the table. Again, the table appears too wide, but the report will print properly. Notice that the table is much more readable.

The label at the top of the table is the Variable Label for svcsmpl. Select it by double-clicking and edit it for clarity (see the screen below).

The table is now formatted to accommodate the long percent label, creating a lot of wasted space. Double-click this element, delete the text, and replace it with the word, "Percent". The empty space disappears and the table appears as follows:

Next, notice that the label for $\mathbf{H 1 6 0 5 2}$ is awkward. Select and clear it.
Last, edit the text in the table label so that it better expresses the content of the table. The finished table appears as follows:

Check Print Preview to see if the table is acceptable.

The last example shows you how to add a Layer dimension to a Crosstabs analysis. Using the same row variable, H16052, suppose you want to look at the percentage of people by their enrollment status in TRICARE Prime, xenrlimt, who smoked at least 100 cigarettes in their lifetime. Suppose you are also interested in sex differences, $\mathbf{x s e x a}$, among the groupings. Xsexa is the Layer variable. You want to remain in the South region, using filtr_6 as the filter variable. The cases will be weighted by CFWT.

The status line indicates Weight On and Filter On. Verify that both the weight and the filter variables are appropriate.

Once more, open the Crosstabs dialog box, enter the analysis variables, and set the Cells options, checking Column under Percentages until the dialog box looks like the following:

Do the following:

- Run Crosstabs.
- Edit the Title element in the Output Navigator.
- Examine Notes and the Case Processing Summary to verify that the crosstab ran as expected.
- Open the table as an SPSS Pivot Table Object, and the following will appear:

The table is difficult to read, but you can improve it by doing the following.

Select the Pivot menu to activate the Pivoting Trays. The table structure is reproduced in the tool as follows:

Place the mouse pointer on each small icon to find the second grouping variable, labeled Male or Female - R, in the ROW dimension. Move it to the COLUMN dimension, and the table changes to the following:

Then drag the Statistics icon to the COLUMN dimension to produce the following change:

Close the Pivoting Trays and hide the dimension label, Male or Female - R, in the table. Then, change the percent label to "Percent" and delete the label for H16052 in the row dimension. Last, revise the label above the table to make it more informative.

The resulting table is both clear and informative.

The Print Preview, as in the view below, shows how the report will print.

## CALCULATING VARIANCES OF ESTIMATES

Sampling error occurs when estimates are derived from a sample rather than a complete census of the population. The sample used for a particular survey is only one of a large number of possible samples of the same size and design that could have been selected. Even if the same questionnaire and instructions were used, the estimates from each sample would differ from the others. The standard error (or square root of the variance) indicates the magnitude of the sampling error and thus measures the precision expected from a particular sample.

It is desirable to assess the accuracy of an estimate. The standard error of a survey estimate measures the precision with which an estimate from one sample approximates the true population value. The standard error can be used to construct confidence intervals for survey parameters, within which the true parameter lies within a measurable degree of certainty.

This section explains how to estimate standard errors or variances for estimators computed from the 2016 Adult HCSDB. For a full discussion of variance estimation methods, see Wolter (1985) and references cited therein.

## Variance Estimation Methods

To account for complex estimators for the sample design ${ }^{1}$, it is customary to use either Taylor series linearization or a resampling method for variance estimation. Neither variance estimation method is, in general, better so the choice of one or the other is largely a matter of convenience. To help users to estimate standard errors using Taylor series linearization or Jackknife replication, the public release files for the 2016 Adult HCSDB include the following variables:

- The stratum variable (STRATUM) for the Taylor series linearization method
- Quarterly final weight (FWRWT) and jackknife replicate weights (FWRWT1 to FWRWT60)
- Annual final weight (CFWT) and annual jackknife replicate weights for the jackknife replication method (CFWT1 to CFWT180)

Three popular software packages are available for performing Taylor series linearization method: SASISTAT version 8.0 or higher, SUDAAN (Research Triangle Institute, 2001) and WesVarPC (Brick et al. 1996), respectively. The last two software packages can be used for replication methods including Jackknife variance estimation. The discussion below explains how SUDAAN and SAS are used to calculate variance estimates using Taylor series linearization method, and how SUDAAN and WesVarPC are used to calculate variance estimates using Jackknife replication method.

## Taylor Series Linearization Method

For most sample designs (including the 2016 Adult HCSDB), design-based variance estimates for linear estimators of totals or means can be obtained with explicit formulas. However, nonlinear functions such as ratios do not have exact expressions for the variance. The Taylor series linearization method approximates the variance of a nonlinear estimator with the variances of the linear terms from the Taylor series expansion. Woodruff (1971) presented applications of this technique to sample surveys. Details on this method can also be found in "The 2016 Health Care Survey of DoD Beneficiaries: Adult Technical Manual".

To calculate variance estimates based on the Taylor series linearization method with HCSDB's stratified sampling design, both the stratum variable (STRATUM) and the final weight (CFWT) specified for each data record are needed.

## SUDAAN

SUDAAN incorporates the final analysis weight and the survey design to obtain estimates and their sampling errors. With a small overall sampling rate of about 1 percent, you can use the withreplacement design procedure (STRWR) in calculating standard errors.

All SUDAAN procedures require the following:

- The specification of sampling design. The terminology for the stratified with-replacement sample design is DESIGN = STRWR.
- The data file sorted by the variable specified in the NEST statement. For the 2016 Adult HCSDB, the data file for adults must be sorted by STRATUM before using any SUDAAN procedure.
- A FILE TYPE appropriate for SUDAAN, if you use a stand-alone SUDAAN program. For example, some SUDAAN PC versions under Windows or MS-DOS accept only V6.02 through V6.04 SAS

[^0]files, and FILE TYPE must be specified as SAS. SAS-callable SUDAAN is also available and can be invoked directly in a SAS program with any available SAS file as input; FILE TYPE is not needed here.

- The WEIGHT variable is CFWT.

The following program is an example of how to use SUDAAN to calculate variance estimates for a mean statistic. Suppose you want to estimate:

- The rating of a specialist (H16031), among all beneficiaries who smoked at least 100 cigarettes in their lifetime (H16052=1) for each TNEX region (XTNEXREG)

```
PROC DESCRIPT DATA=HCSDB /*FILETYPE=SAS*/ DESIGN=STRWR;
WEIGHT CFWT;
NEST STRATUM;
SUBPOPN H16052=1;
SUBGROUP XTNEXREG;
LEVELS 4;
VAR H16031;
RUN;
```

The following program is an example of how to use SUDAAN to calculate variance estimates for column percentages or row percentages. Suppose you want to estimate:

- A cross tabulation of respondents in TNEX region 3 who last had a blood pressure reading less than 12 months ago, 1 to 2 years ago, and more than 2 years ago (H16049) by TRICARE enrollment (XENRLLMT).

```
PROC CROSSTAB DATA=HCSDB /*FILETYPE=SAS*/ DESIGN=STRWR;
    WEIGHT CFWT;
    NEST STRATUM;
    SUBPOPN XTNEXREG = 3;
    SUBGROUP H16049 XENRLLMT;
    LEVELS 35;
    TABLES H16049 *XENRLLMT;
    RUN;
```

From the above examples, users should note that:

- PROC DESCRIPT can be used to compute estimates of means and the corresponding standard errors.
- PROC CROSSTAB can be used to compute estimates of proportions and the corresponding standard errors.

For a more detailed and complete discussion of how to use SUDAAN, see Research Triangle Institute (2001).

SAS
SAS/STAT version 8.0 and higher provide procedures for survey sampling. These procedures can be used to analyze data from a stratified random sampling. These procedures include:

- PROC SURVEYMEANS: for estimating population means, totals, and proportions, including domain (subpopulation) estimates
- PROC SURVEYREG: for performing linear regression model fitting.

The following procedures were added to SAS/STAT version 9.0:

- PROC SURVEYFREQ: for constructing one-way frequency tables, two-way and multiway crosstabulation tables, and estimating population totals and proportions
- PROC SURVEYLOGISTIC: for performing cumulative logit regression model fitting, logit, complementary log-log, and probit link functions, and generalized logit regression model fitting.

The above procedures currently provide only the Taylor series linearization method to estimate standard error or variance of the estimate.

The following program is an example of how to use SAS/STAT to calculate variance estimates for a mean statistic. Suppose you want to estimate:

- The rating of a specialist (H16031), among all beneficiaries who smoked at least 100 cigarettes in their lifetime (H16052=1) for each TNEX region (XTNEXREG)

| PROC SURVEYMEANS DATA=HCSDB; |  |
| :--- | :--- |
| WEIGHT | CFWT; |
| STRATA | STRATUM; |
| DOMAIN | H16052 * XTNEXREG; |
| VAR | H16031; |
| RUN; |  |

The above codes will provide output for H16052=1 and 2. User only needs to use output from H16052=1.

The following program is an example of how to use SAS/STAT to calculate variance estimates for column percentages or row percentages. Suppose you want to estimate:

- A cross tabulation of respondents in each TNEX region who last had a blood pressure reading less than 12 months ago, 1 to 2 years ago, and more than 2 years ago (H16049) by TRICARE enrollment (XENRLLMT).

```
PROC SURVEYFREQ DATA=HCSDB;
WEIGHT
STRATA STRATUM;
TABLES XTNEXREG * H16049 * XENRLLMT;
RUN;
```

For a more detailed and complete discussion of how to use SAS/STAT, see SAS Institute Inc. (1999) and SAS Institute Inc. (2004).

## Jackknife Replication Method

Another popular way to estimate the variance is to use a resampling method such as Jackknife replication, balanced repeated replication, random groups, or the bootstrap method. Like other replication methods, Jackknife replication constructs a number of subsamples (replicates) from the full sample and computes the statistics of interest for each replicate (with the same formula as the full sample estimate). The mean square error of the replicate estimates around their corresponding full estimate provides an estimate of the sampling variance of the statistic of interest regardless of the functional form of the statistic.

There are 180 replicate weights (CFWT01-CFWT180) for the 2016 Adult HCSDB file. Construction of these weights is described in the "2016 Health Care Survey of DoD Beneficiaries: Adult Technical Manual". With the replicate weights, you can produce Jackknife standard errors using in-house or custom-written software, or you can use a publicly available software package such as WesVarPC or SUDAAN 8. Because WesVarPC 2.02 is available as freeware on the World Wide Web (http://www.westat.com/wesvar/demo/index.html), the example below explains how it is used to produce Jackknife variance estimates for statistics from the 2016 Adult HCSDB.

Suppose you want to estimate the mean rating of the specialist seen most often (H16031) among all beneficiaries who smoked at least 100 cigarettes in their lifetime (H16052=1) for each region (XTNEXREG). You would use SUDAAN or WesVarPC as follows.

## SUDAAN

```
PROC DESCRIPT DATA=HCSDB DESIGN=JACKKNIFE;
WEIGHT CFWT;
JACKWGTS CFWT1-CFWT180 / ADJJACK=1;
SUBPOPN H16052=1;
SUBGROUP XTNEXREG;
LEVELS 4;
VAR H16031;
OUTPUT NSUM MEAN SEMEAN / TABLECELL=DEFAULT FILENAME=OUT1;
RUN;
```

## WESVARPC

- Create a SAS V6.04 file, SAS Transport file, or ASCII file. WesVarPC has a restriction for the input data format. All files must be converted to one of these three types of files before being imported to WesVarPC.
- Create a WesVarPC data file. From the Prep menu, choose the Import Data Files screen and import all variables for the analysis. For this example, input H16052, H16031, and XTNEXREG into the Variables box, CFWT1-CFWT180 into the Replicates box, and MPRID into the ID box. Also specify the replication method as JK1 on this screen.
- Create a data file for the subpopulation. Specify the subpopulation by choosing the Subpop WesVarPC Data File from the Prep menu: H16052=1.
- Calculate estimates. From the Tables menu, choose New and select the file created from the above procedure. Then, from the Table Request screen, specify H16031 as the Analysis variable, MEAN (H16031) as the Compute Statistics, and XTNEXREG as the Table.

The above steps can also be followed to produce standard errors. The WesVarPC user's manual (Brick et al. 1996) provides other possible methods for producing standard errors. The latest WesVarPC 4.0 is no longer freeware and can be purchased from Westat.

## Chapter 5

## Codebook

This chapter describes every variable in the database. This codebook will also be helpful in identifying which data are available for various analyses, and what, if any, recoding of variables will meet your needs. It may also be useful in reviewing output.

The codebook contains frequency distributions combining observations for three quarters of 2016. It also contains frequencies broken down by the quarter in which the survey was fielded. Annual frequencies for all variables are shown first followed by all quarterly frequencies. Frequencies for the replicate weights (FWRWT1-FWRWT60 and CFWT1-CFWT180) are not shown.

The variables are in order based on their order in the database. An alphabetical listing (see Table of Contents) is provided to assist in locating variables.

The codebook contains frequency distributions for both discrete and continuous variables. A discrete variable is one that has only a few values. A continuous variable may have many possible values.

Some questions are asked in only one quarter of 2016. For these supplementary questions, analysts should use the quarter indicator (Quarter) variable and the appropriate quarterly weight (FWRWT).

Below are two examples of the presentation of variables in the codebook. For each variable, we include the variable name, definition, weighted and unweighted frequency distributions, and the format value for each value. The first example contains a frequency distribution for a discrete variable.

## Privacy Advisory

Providing information in this Survey is voluntary. There is no penalty nor will your benefits be affected if you choose not to respond, although maximum participation is encouraged so that the data will be complete and representative.

The Survey was written so that answers should not require you to provide any personally identifiable information (PII), but please be assured that any PII provided will be treated as confidential. Your responses are collected via a secure system which does not collect any information that could be used to determine your identity.

Answering the questions is voluntary; you may stop the Survey at any time.

According to the Privacy Act of 1974 (5 U.S.C. §552a), the Department of Defense is required to inform you of the purposes and use of this survey. Please read it carefully.

Authority: 10 U.S.C. §1074 (Medical and Dental Care for Members and Certain Former Members, as amended by National Defense Authorization Act of 1993, Public Law 102-484, §706); 10 U.S.C. §1074f (Medical Tracking System for Members Deployed Overseas); 32 C.F.R. §199.17 (TRICARE Program); 45 C.F.R. Part 160 Subparts A and E of Part 164 (Health Insurance Portability and Accountability Act of 1996, Privacy Rule); DoD 6025.18-R (Department of Defense Health Information Privacy Regulation); DoD 6025.13-R (Military Health System Clinical Quality Assurance Program Regulation); 64 FR 22837 (DHA 08 - Health Affairs Survey Data Base, April 28, 1999); and, E.O. 9397 (as amended, November 20, 2008, for SSN collection).

Purpose: This survey helps health policy makers gauge beneficiary satisfaction with the current military health care system and provides valuable input from beneficiaries that will be used to improve the Military Health System.

Routine Uses: None.

Disclosure: Participation is voluntary. Failure to respond will not result in any penalty to the respondent; however maximum participation is encouraged so that data will be as complete and representative as possible.

## SURVEY STARTS HERE

As an eligible TRICARE beneficiary, please complete this survey even if you did not receive your health care from a military facility.

The Department relies on benchmark data to report on quality and service, as well as making apple-to-apples comparisons of the TRICARE health plan performance with other civilian health plans.

This survey and most of its questions are closely modeled on the most widely used and nationally recognized patient experience survey in the U.S. - The Consumer Assessment of Healthcare Providers and Systems (CAHPS ${ }^{\circledR}$ ) developed by the Department of Health and Human Services. That is why we use it.

We realize that some of the questions may not seem to specifically apply to you, but your ratings are important to us so we can compare TRICARE to civilian health plans.

This survey is about the health care of the person whose name appears on the cover letter. The questionnaire should be completed by that person. If you are not the addressee, please give this survey to that person.

Question 1: Are you the person whose name appears on the cover letter?

## SURVEY STARTS HERE

As an eligible TRICARE beneficiary, please complete this survey even if you did not receive your health care from a military facility.

The Department relies on benchmark data to report on quality and service, as well as making apple-to-apples comparisons of the TRICARE health plan performance with other civilian health plans.

This survey and most of its questions are closely modeled on the most widely used and nationally recognized patient experience survey in the U.S. - The Consumer Assessment of Healthcare Providers and Systems (CAHPS ${ }^{\circledR}$ ) developed by the Department of Health and Human Services. That is why we use it.

We realize that some of the questions may not seem to specifically apply to you, but your ratings are important to us so we can compare TRICARE to civilian health plans.

This survey is about the health care of the person whose name appears on the cover letter. The questionnaire should be completed by that person. If you are not the addressee, please give this survey to that person.

Question 1: Are you the person whose name appears on the cover letter?

During the survey, please do not use your browser's FORWARD and BACK buttons. Instead, please always use the buttons below to move backward and forward through the survey.

To begin, just click on the "Next" button below. This will take you right into the survey.

## SURVEY STARTS HERE

As an eligible TRICARE beneficiary, please complete this survey even if you did not receive your health care from a military facility.

The Department relies on benchmark data to report on quality and service, as well as making apple-to-apples comparisons of the TRICARE health plan performance with other civilian health plans.

This survey and most of its questions are closely modeled on the most widely used and nationally recognized patient experience survey in the U.S. - The Consumer Assessment of Healthcare Providers and Systems (CAHPS ${ }^{\circledR}$ ) developed by the Department of Health and Human Services. That is why we use it.

We realize that some of the questions may not seem to specifically apply to you, but your ratings are important to us so we can compare TRICARE to civilian health plans.

This survey is about the health care of the person whose name appears on the cover letter. The questionnaire should be completed by that person. If you are not the addressee, please give this survey to that person.

Question 1: Are you the person whose name appears on the cover letter?

## Dear SSGT JANE DOE:

#### Abstract

We at the Department of Defense (DoD) invite you to participate in the October 2015 Health Care Survey of Department of Defense Beneficiaries. We would very much appreciate your opinions by completing a brief online survey. Your feedback will benefit not only you and your family, but also other fellow military families. This survey is not about a particular health care visit, but about your health care experiences overall. The results are used to evaluate the services you have received in meeting your health care needs either through TRICARE or any other health insurance plan. DoD takes this survey very seriously and your input is truly critical to our efforts.

The survey web site is below. Please complete it before 1 December 2015. If you are an active duty service member, we will also send you a digitally signed email to your military email address with an attachment. The attachment contains the link to the survey web site.

## Web site: http://www.health.mil/healthsurveys <br> Select Survey \# 1: Health Care Survey of DoD Beneficiaries (HCSDB) Your password: 5654321

Be sure to enter the web address into the address box of your internet browser, not a search engine (please DO NOT USE Google, Bing or Yahoo). The site can be accessed from any computer with internet access, at home or elsewhere. For more help, please look on the other side of this letter.

The purpose of this survey is to examine the health care experiences of our 9.5 million military health system beneficiaries. The results of the survey will be used to evaluate the care that members of the military and their families receive either through TRICARE or any other program. Even if you don't use TRICARE now, either on a military installation or in a civilian provider's office, we still want to understand your health care experiences. Your answers will be kept confidential, and the survey vendor DoD has contracted with to field this survey will not share any information that could identify you. Your participation is voluntary and will not affect your health benefits. The survey takes about 15 minutes to complete.

If you have questions about the survey or don't want to participate, please contact the Survey Processing Center by sending an email to dod.health@ipsos-research.com; by calling 877-236-2390; or sending a fax to 800-409-7681. ## SAMPLE INSTRUCTIONS AND FREQUENTLY ASKED QUESTIONS - Quarter I

## Access the survey in 4 easy steps

1
Please open up your web browser. Here are some common browser icons:

## 2

Locate the browser's address box, which is at the top of the window, and type the web address exactly as it appears on the notice you received.

Is this survey regarding a particular health care visit?
No, this survey will ask you questions regarding your overall experience with your health care and not about a specific health care visit.

## 4

This will take you to the survey home page, which looks like the image below. Once there, enter your password to begin the survey.

## Frequently Asked Questions

## Why should I take part in this survey?

Your feedback will benefit not only you and your family, but also other fellow military families. This important survey about your health care experiences will be used to evaluate the services beneficiaries have received in meeting their health care needs.

I have questions regarding TRICARE, not this survey. Where can I get answers?
The survey vendor, Ipsos, may not be able to answer questions regarding TRICARE or TRICARE eligibility. For those, please go to www.tricare.mil/contactus, or call 877-874-2273 for the North Region, 800-444-5445 for the South Region, or 877-988-9378 for the West Region.
How was my name selected? Can you pick someone else?
We selected a statistical sample of beneficiaries. Those selected cannot be replaced, and your responses to the survey are critical to helping us learn more about health care experiences. This survey is very important to DoD and your input is truly critical to our efforts.

## Dear [RANKCD] [PN1STNM] [PNLSTNM]:

The military is a critical component of the U.S. defense system, providing safety and security to civilians across the country. Therefore, it is essential to ensure that military members have access to comprehensive and affordable health care. You can be a part of the effort to improve the military health care system by participating in the DoD's October 2015 Health Care Survey of Department of Defense Beneficiaries (HCSDB). The purpose of the Health Care Survey of DoD Beneficiaries is to examine the health care experiences of our 9.5 million military health system beneficiaries. This survey asks about your overall health care experiences, and your feedback will help the DoD understand the necessary advancements that must be made to the health care system that will ultimately benefit military members and their families nationwide.

## Dear [RANKCD] [PN1STNM] [PNLSTNM]:

The military is a critical component of the U.S. defense system, providing safety and security to civilians across the country. Therefore, it is essential to ensure that military members have access to comprehensive and affordable health care. You can be a part of the effort to improve the military health care system by participating in the DoD's October 2015 Health Care Survey of Department of Defense Beneficiaries (HCSDB). The purpose of the Health Care Survey of DoD Beneficiaries is to examine the health care experiences of our 9.5 million military health system beneficiaries. This survey asks about your overall health care experiences, and your feedback will help the DoD understand the necessary advancements that must be made to the health care system that will ultimately benefit military members and their families nationwide.

SSGT JANE DOE
222 S. RIVERSIDE DRIVE
CHICAGO, IL 60606-5809

Dear SSGT JANE DOE:

We at the Department of Defense (DoD) invite you to participate in the January 2016 Health Care Survey of Department of Defense Beneficiaries. We would very much appreciate your opinions by completing a brief online survey. Your feedback will benefit not only you and your family, but also other fellow military families. This survey is not about a particular health care visit, but about your health care experiences overall. The results are used to evaluate the services you have received in meeting your health care needs either through TRICARE or any other health insurance plan. DoD takes this survey very seriously and your input is truly critical to our efforts.

The survey web site is below. Please complete it before 6 March 2016. If you are an active duty service member, we will also send you a digitally signed email to your military email address with an attachment. The attachment contains the link to the survey web site.

## Web site: http://www.health.mil/healthsurveys <br> Select Survey \#1: Health Care Survey of DoD Beneficiaries (HCSDB) Your password: 5654321

Be sure to enter the web address into the address box of your internet browser, not a search engine (please DO NOT USE Google, Bing or Yahoo). The site can be accessed from any computer with internet access, at home or elsewhere. For more help, please look on the other side of this letter.

The purpose of this survey is to examine the health care experiences of our 9.5 million military health system beneficiaries. The results of the survey will be used to evaluate the care that members of the military and their families receive either through TRICARE or any other program. Even if you don't use TRICARE now, either on a military installation or in a civilian provider's office, we still want to understand your health care experiences. Your answers will be kept confidential, and the survey vendor DoD has contracted with to field this survey will not share any information that could identify you. Your participation is voluntary and will not affect your health benefits. The survey takes about 15 minutes to complete.

If you have questions about the survey or don't want to participate, please contact the Survey Processing Center by sending an email to dod.health@ipsos-research.com; by calling 877-236-2390; or sending a fax to 800-409-7681. For prompt assistance, please include your ID number, 1234567890. For questions related to TRICARE, please go to www.tricare.mil/contactus, or for the North Region call 877-874-2273, South Region call 800-444-5445, or West Region call 877-988-9378.

Dear SSGT JANE DOE:

Your input is critical to the success of the January 2016 Health Care Survey of Department of Defense Beneficiaries. Approximately a month ago, we sent you an invitation to take the survey. If you already completed the survey online, I thank you for your participation.

If you have not completed the survey, please log on at the web site below to complete it before 24 March 2016.

> Web site: http://www.health.mil/healthsurveys Select Survey \#1: Health Care Survey of DoD Beneficiaries (HCSDB) Your password: 5654321

Be sure to enter the address into the address box of your internet browser, not a search engine (e.g., Google, Bing or Yahoo). The site can be accessed from any computer with internet access, at home or elsewhere. For more help, please look on the other side of this letter.

The purpose of this survey is to examine the health care experiences of our 9.5 million military health system beneficiaries. The results of the survey will be used to evaluate the care that members of the military and their families receive either through TRICARE or any other program. Even if you don't use TRICARE now, either on a military installation or in a civilian provider's office, we still want to understand your health care experiences. Your answers will be kept confidential, and the survey vendor DoD has contracted with to field this survey will not share any information that could identify you. Your participation is voluntary and will not affect your health benefits. The survey takes about 15 minutes to complete.

If you have questions about the survey or don't want to participate, please contact the Survey Processing Center by sending an email to dod.health@ipsos-research.com; by calling 877-236-2390; or sending a fax to 800-409-7681. For prompt assistance, please include your ID number, 1234567890. For questions related to TRICARE, please go to www.tricare.mil/contactus, or for the North Region call 877-874-2273, South Region call 800-444-5445, or West Region call 877-988-9378.

Thank you. Your response would be greatly appreciated!

## Access the survey in 4 easy steps

1
Please open up your web browser. Here are some common browser icons:

## 3

Press the Enter key on your keyboard and you will go to this website. Click the "Take Survey \#1" in the first of the three boxes in the middle of your screen.

## Frequently Asked Questions

Why should I take part in this survey?
Your feedback will benefit not only you and your family, but also other fellow military families. This important survey about your health care experiences will be used to evaluate the services beneficiaries have received in meeting their health care needs.

## 2

Locate the browser's address box, which is at the top of the window, and type the web address exactly as it appears on the notice you received.

## 4

This will take you to the survey home page, which looks like the image below. Once there, enter your password to begin the survey.

## I have questions regarding TRICARE, not this survey. Where can I get answers?

The survey vendor, Ipsos, may not be able to answer questions regarding TRICARE or TRICARE eligibility. For those, please go to www.tricare.mil/contactus, or call 877-874-2273 for the North Region, 800-444-5445 for the South Region, or 877-988-9378 for the West Region.
How was my name selected? Can you pick someone else?
We selected a statistical sample of beneficiaries. Those selected cannot be replaced, and your responses to the survey are critical to helping us learn more about health care experiences. This survey is very important to DoD and your input is truly critical to our efforts.

## Dear SSGT JANE DOE:

We at the Department of Defense (DoD) invite you to participate in the April 2016 Health Care Survey of Department of Defense Beneficiaries. We would very much appreciate your opinions by completing a brief online survey. Your feedback will benefit not only you and your family, but also other fellow military families. This survey is not about a particular health care visit, but about your health care experiences overall. The results are used to evaluate the services you have received in meeting your health care needs either through TRICARE or any other health insurance plan. DoD takes this survey very seriously and your input is truly critical to our efforts.

The survey web site is below. Please complete it before 16 May 2016. If you are an active duty service member, we will also send you a digitally signed email to your military email address with an attachment. The attachment contains the link to the survey web site.

## Frequently Asked Questions

Why should I take part in this survey?
Your feedback will benefit not only you and your family, but also other fellow military families. This important survey about your health care experiences will be used to evaluate the services beneficiaries have received in meeting their health care needs.

## 2

Locate the browser's address box, which is at the top of the window, and type the web address exactly as it appears on the notice you received.

## 4

This will take you to the survey home page, which looks like the image below. Once there, enter your password to begin the survey.

Is this survey regarding a particular health care visit?
No, this survey will ask you questions regarding your overall experience with your health care and not about a specific health care visit.

I have questions regarding TRICARE, not this survey. Where can I get answers?
The survey vendor, Ipsos, may not be able to answer questions regarding TRICARE or TRICARE eligibility. For those, please go to www.tricare.mil/contactus, or call 877-874-2273 for the North Region, 800-444-5445 for the South Region, or 877-988-9378 for the West Region.
How was my name selected? Can you pick someone else?

2016 HEALTH CARE SURVEY OF DOD BENEFICIARIES (HCSDB) CODING SCHEME AND CODING TABLES

BASIC SAS AND ASCII/EBCDIC MISSING DATA AND NOT APPLICABLE CODES

| SAS |  |  |
| :---: | :---: | :--- |
| Numeric | ASCII/EBCDIC <br> Numeric |  |
| . | -9 | No response |
| .O | -7 | Out of range error |
| .N | -6 | Not applicable or valid skip |
| .D | -5 | Scalable response of "don't know" or "not sure" |
| .I | -4 | Incomplete grid error |
| .C | -1 | Question should have been skipped |

Missing values '.' and incomplete grids '.I' are encoded prior to implementation of the Coding Scheme Notes (see below).

Definition of "all are blank" in Coding Table for Note 2:
Responses to H16007-H16008 are all missing.
Definition of "blank or NA" in Coding Table for Note 2:
All of the following are true: H16007-H16008 are a combination of not applicable (-6) or missing.
Definition of "one marked and one NA" in Coding Table for Note 2:
H16007-H16008 have one response marked not applicable (-6) and one marked response (other than not applicable).
Definition of "marked" in Coding Table for Note 2:
Any pattern of marks outside the definitions "all are blank", "one marked and one NA", and "blank or NA".

| 8 | . Missing | "All are blank" | Stands as original value | Stand as original value |  |

* Indication of backward coding (B) or forward coding (F).

Definition of "all are blank" in Coding Table for Note 3:
Responses to H16010-H16011 are all missing.
Definition of "blank or NA" in Coding Table for Note 3:
All of the following are true: H16010-H16011 are a combination of not applicable (-6) or missing.
Definition of "one marked and one NA" in Coding Table for Note 3:
H16010-H16011 have one response marked not applicable (-6) and one marked response (other than not applicable).
Definition of "marked" in Coding Table for Note 3:
Any pattern of marks outside the definitions "all are blank", "one marked and one NA", and "blank or NA".

* Indication of backward coding (B) or forward coding (F).

Definition of "all are blank" in Coding Table for Note 7:
Responses to H16021-H16024 are all missing.
Definition of "blank or NA" in Coding Table for Note 7:
Responses to H16021-H16024 are a combination of not applicable (-6) or missing.
Definition of "marked" in Coding Table for Note 7:
Any pattern of marks for H16021-H16024 outside the definitions "all are blank" and "blank or NA".

Definition of "all are blank" in Coding Table for Note 9:
Responses to H16029-H16031 are all missing.
Definition of "blank or NA" in Coding Table for Note 9:
All of the following are true: H16029 and H16031 are a combination of not applicable (-6) or missing. H16030 is either missing or 0 : None.

Definition of "marked" in Coding Table for Note 9:
Any pattern of marks outside the definitions "all are blank" and "blank or NA".

Coding Table for Note 10:

SEX (PNSEXCD) is the gender from the DEERS file. This variable is not used to override questionnaire responses, but to clear up any omissions or discrepancies in the responses.

XSEXA is the recoded gender variable after taking into account the self-reported response (H16058), any responses to gender-specific questions, and the gender of the sample beneficiary from DEERS.

* Indication of backward coding (B) or forward coding (F).

Definition of "Height within range for gender" in Coding Table for Note 23_HT:
From 2006 NHIS, height for men is $63 "-76^{\prime \prime}\left(5^{\prime} 3^{\prime \prime}-6^{\prime} 4 "\right)$, height for woman is $59 "-70^{\prime \prime}\left(4{ }^{\prime} 11^{\prime \prime}-5{ }^{\prime} 10^{\prime \prime}\right)$.
Definition of "Height out of range for gender" in Coding Table for Note 23_HT:
Any height outside the definition of "Height within range for gender".
Definition of "Height within range for either gender" in Coding Table for Note 23_HT:
Use lowest and highest height from either gender to set range: 59 "- 76 " ( $4{ }^{\prime} 11$ "- 6 ’ 4 ").
Definition of "Height out of range for either gender" in Coding Table for Note 23_HT: Any height outside the definition of "Height within range for either gender".

Definition of "all are blank" in Coding Table for Note 2:
Responses to H16007-H16008 are all missing.
Definition of "blank or NA" in Coding Table for Note 2:
All of the following are true: H16007-H16008 are a combination of not applicable (-6) or missing.
Definition of "one marked and one NA" in Coding Table for Note 2:
H16007-H16008 have one response marked not applicable (-6) and one marked response (other than not applicable).
Definition of "marked" in Coding Table for Note 2:

Definition of "all are blank" in Coding Table for Note 3:
Responses to H16010-H16011 are all missing.
Definition of "blank or NA" in Coding Table for Note 3:
All of the following are true: H16010-H16011 are a combination of not applicable (-6) or missing.
Definition of "one marked and one NA" in Coding Table for Note 3:
H16010-H16011 have one response marked not applicable (-6) and one marked response (other than not applicable).
Definition of "marked" in Coding Table for Note 3:
Any pattern of marks outside the definitions "all are blank", "one marked and one NA", and "blank or NA".

SEX (PNSEXCD) is the gender from the DEERS file. This variable is not used to override questionnaire responses, but to clear up any omissions or discrepancies in the responses.

XSEXA is the recoded gender variable after taking into account the self-reported response (H16058), any responses to gender-specific questions, and the gender of the sample beneficiary from DEERS.

Definition of "all are blank" in Coding Table for Note 19b:
All variables H16059B--H16064 are missing.
Definition of "marked" in Coding Table for Note 19b:
Any pattern of marks outside the definition "all are blank".

Definition of "Height within range for gender" in Coding Table for Note 23_HT:
From 2006 NHIS, height for men is $63^{\prime \prime}-76^{\prime \prime}\left(5^{\prime} 3 "-6^{\prime} 4 "\right)$, height for woman is $59 "-70^{\prime \prime}\left(4{ }^{\prime} 11^{\prime \prime}-5{ }^{\prime} 10^{\prime \prime}\right)$.
Definition of "Height out of range for gender" in Coding Table for Note 23_HT:
Any height outside the definition of "Height within range for gender".
Definition of "Height within range for either gender" in Coding Table for Note 23_HT:
Use lowest and highest height from either gender to set range: 59"-76" (4'11"- 6’4").
Definition of "Height out of range for either gender" in Coding Table for Note 23_HT: Any height outside the definition of "Height within range for either gender".

Definition of "all are blank" in Coding Table for Note 3:
Responses to H16010-H16011 are all missing.
Definition of "blank or NA" in Coding Table for Note 3:
All of the following are true: H16010-H16011 are a combination of not applicable (-6) or missing.
Definition of "one marked and one NA" in Coding Table for Note 3:
H16010-H16011 have one response marked not applicable (-6) and one marked response (other than not applicable).
Definition of "marked" in Coding Table for Note 3:
Any pattern of marks outside the definitions "all are blank", "one marked and one NA", and "blank or NA".

Responses to H16057A-H16057D are all missing or unmarked.
Definition of "marked" in Coding Table for Note 18:
Any pattern of marks outside the definition "all are unmarked"

## Coding Table for Note 19:

Note 19 (Part A)
H16058, H16059B, H16060-H16064, SEX, XSEXA, S16BH01- S16BH10

SEX (PNSEXCD) is the gender from the DEERS file. This variable is not used to override questionnaire responses, but to clear up any omissions or discrepancies in the responses.

XSEXA is the recoded gender variable after taking into account the self-reported response (H16058), any responses to gender-specific questions, and the gender of the sample beneficiary from DEERS.

Note 19 (Part B):
XSEXA, H16059B, H16060-H16064, S16BH01-S16BH10

| 3 | 2: Female | "All are blank" or at least one is "marked" | Stand as original value |  |
| 4 | .: Missing | "All are blank" or at least one is "marked" | Missing value | F |

* Indication of backward coding (B) or forward coding (F).

Definition of "all are blank" in Coding Table for Note 19b:
All variables H16059B--H16064 and S16BH01--S16BH10 are missing.
Definition of "marked" in Coding Table for Note 19b:
Any pattern of marks outside the definition "all are blank".

Definition of "all are uncovered/unknown" in Coding Table for Note 25:
Responses to H16075-H16079 are all 2: no, -5: don’t know, or missing.
Definition of "covered" in Coding Table for Note 25:
Any pattern of marks outside the definition "all are uncovered/unknown".
